SCHOOL-2 story and base, reinlegach concrete, \$30,000 Laucaster, Las Angeles Co., Cal Architect, R 1. Hopkins, Delta Bldg., L. A. Owners, Laurenster School District A onestory building to contain four class rooms, besides laboratory rooms, study tooms etc., and a dormitory to accommodate thirty students will be erected. Both will be of reinforced concrete construction with pine finish and thours, furnace heat, composition coofs, and plumbing. Plans are being prepared.

BANK AND OFFICES-7 story and lorse. Class A construction. Cost not stated Los Angeles, Cal. Architects, Real Bros., California-Pacific Bldg., 8 F. Owner, Hurlett C. Merritt. The building will be erected at the corner of 5th and Boardway, covering an area of 60 by 115 feet. The stories will the higher than usually constructed, and the height of the building will be 115 There will be stores in the first story and a bank in the second. The upper floors will be arranged for office purposes. The seventh story heing occupied by the Merritt Corporation. The building will be of steel frame and brick construction, and will have reinforced concrete floors, sidewalk lights, pressed brick and stone facing, plate glass windows, marble finish in the lobby and corridors, hollow tile partitions, metal frames and sash, hardwood trim, three elevators, marble stairways, steam heat, vacuum cleaning. Plans are complete and figures are being taken.

Contracts Awarded.
WAREHOUSE-4 story a

WAREHOUSE-4 story and base, brick and steel, \$43,000. Los Angeles. Cal Architects, Morgan, Walls & Morgan, Van Nuys Bldg. L. A. Owner, Mrs S H, Van Nuys, Contractors, Alta Planing Mill Co., 838 McGarry street, L. A Contract price, \$43,600,

PORTLAND AND OREGON.

APARTMENT HOUSE-4 story and hase, brick and steel, \$50,000. Portland, Ore. Architects, Claussen & Claussen, Macleay Bldg., Portland. Owner, C. C. Brown. The fullding will be erected on Madison between Broadway and Park street with a frontage of 50 feet and a depth of 100 feet show a total of 34 suites of three and four rooms each with bath and wall beds. Interior finish will be of pine and hardwood veneer. There will be steam heat, elevator service, vacuum cleaning and a hot water supply. All bath rooms will have tile wainscot and composition floors. Marble and tile will be used in the entrance Exteruor of the huilding will be faced with pressed brck. Plans are complete and figures are now beng taken,

SCHOOL-2 story and hase, brick, \$30,000 McMinnville, Ore. Architect. Ernest Kruner, Worcester Bldg., Portland. Owners, McMinnville School District. The building has been designed to contain six class rooms, principal's office and an assembly hall. Interior will be finished in pine throughout.

Veneered Panels that ARE good----order today from

For all purposes use Wybro Panels

No matter what "kind" of a panel you require, you will find it among the WYBRO family of 168 varieties.

"A Panel for every purpose"—-that's the WYBRO advantage. And they are all UNIFORM in quality—-always the best obtainable.

White Brothers

5th and Brannan Streets

San Francisco

Maple floors will be used in the class rooms. Plans provide for furnace heat and modern school plumbing. Exterior will be faced with pressed brick. Plans are now being prepared and figures will be called for within the next three weeks.

SEATTLE AND WASHINGTON.

APARTMENT HOUSE-3 story and base, brick and steel, \$30,000, Seattle, Wash, Architects, Thompson & Thompson, Matual Life Bldg, Scattle. Owner, S. A. Martin. The building will be erected on Republican street, covering an area of 41 by 83 feet. There will be a number of two and three room suites with wall beds and private bath rooms. Interior Inish will be of pine and hardwood veneer. Plans provide for steam heat and a bot water supply. All bath rooms will have tile wainscot and composition floors. Entrance will be finished in tile and marble. Exterior of the building will be faced with pressed brick. Plans are complete and in the hands of the owner who will do the work by Day Labor.

RESIDENCE - 2 story and base, brick, \$20,000. Seattle, Wash, Archltect, Julian Everett, Boston Block, Seattle Owner Dr O. F. Lawson. dwelling will be erected on Federal avenue on a large plot of ground which will be laid out in formal gardens. The dwelling has been designed to contain ten rooms and several baths. Interior finish will be largely of hardwood with pine used in the servants' rooms. There will be furnace heat and open fire places. Mantels will be of tile or All bath rooms will have brick tile wainscot and floors and will be equipped with showers An automatic water heater will be installed. Vacuam cleaning is also specified. of the house will be faced with pressed Plans are complete and figures are being taken.

THE WEAKNESS OF THE LIEN LAW

By Lloyd S. Ackerman.

The Mechanics' Lien Law is a vast improvement over the former one, and we owe a debt of gratitude to the sturdy fighters who represented the Buildings Trades at the 1911 session of the Legislatore, and to whose tireless efforts the passage of the present law is attributable. There has been less litigation under the existing law by more than inc than there was under the old system. The fact that no case has yet reached the Appellate Courts of this State in which the con-

stitutionality of the new system has been attacked is proof conclusive that it furnishes no encouragement to litigation and that under its clearly defined provisions the owner and the general contractor have exercised sufficient caution in building operations to guard against the consequences of the direct lien. All mechanics' lien laws are designed to furnish protection to the person or persons whose work, labor or materials enters into the construction of a building theory of these laws in all the states is that such persons should not be renuired to look to the personal credit of the person by whom they are employed, but having by their own hands or acts made their work an inseperable nortion of the owner's land, the land must stand security for the payment. I propose in this article to consider the efficacy of statutes authorizing liens as a real protection to contractor, material man and mechanic, and shall confine my consideration exclusively to the existing law in this State. I concede that the direct

vastly to be preferred to the lien on the fund due from owner to general contractor from the standpoint of the person who does work or furnishes materials. Formerly the improvident contractor who dissipated the payments received from the owner diverted them from their proper course could defeat the rights of subcontractor, laborers and materialmen whose sole recourse for their compensation was the money due the contractor by the owner. If the contractor had incurred liabilities to laborers, materialmen, etc., to an amount of \$5,000 and his natments remaining due under the contract were only \$2,500, the persons who furnished labor and materials were obliged to divide the \$2,500 between them and receive fifty cents on the dollar for their work through no fault of their This condition, happily, is now changed and sub-contractors, ers and materialmen now are given a means whereby they may obtain payment in full for their work, and this by virtue of the direct lien which has nothing to do with the state of accounts between the owner and the original contractor. How does this work out in practice? Has the person who furnishes labor and materials a real as distinguished from an apparent security for his work? To determine this question let us examine a typical case which now arises with increasing frequency. A contract is let for conetruction of a hullding the general E. H. Williams

615 Phelan Building, San Francisc

contractor finds that he has bitten off more than he can chew, the claims of persons who have furnished labor and materials aggregate \$6,000, the amount due the contractor from the owner is \$4,000. These persons demand their money in full. The owner says, 'd can only pay you 6623% on your claims, I only owe the contractor \$4,000 and your demands aggregate \$6,000. will have to take your proportion of the amount due the contractor," "Ah." replies the sub-contractor, etc., "but we have the direct lien and if you do not pay us we will file liens against your property." "Alright," says the owner, 'go ahead

"Alright," says the owner, "go ahead and lien."

Now to the unitiated this would seem to be a problem simple of solution from the lien claimant's point of view. But is it? Let us take the case of one of the sub-contractors as an example. He is a plasterer and has a claim against the building for \$1,500, He goes to his attorney and is advised to file a lien. He inquires how long it will take to foreclose and he is told possibly six months, possibly a year. He anxiously informs his atturney that he needs the money to carry on other jobs, that he can't wait that long, that he must have the money now. The attorney is powerless. The sub-contractor rushes back to the owner and lays his difficulty before him. The owner is indifferent and refuses to help. The result is in nine cases out of ten the sub-contractor takes his 660 on the dollar, and the owner without the slightest legal excuse defrauds him out of the just proceeds of his honest toll,

This is one case. Take another and more diagrant one. The owner decides to build without a general contractor. He farms out all his contracts to different contractors and material men. All his contracts are therefor original. When the work on the building is completed and final payments are due on the various contracts, the unscrupulous owner de. cides that he will wring a few dollars from the necessities of his contractors. His total obligations were originally \$60,000. His final pay-ments aggregate \$12,500. He sees an easy way to make \$1,250, and so he tells all of his contractors that he is short of money, and he is very sorry to inform them that if they want immediate settlement they will have to take 90% of their just claims. course if you want to wait," he informs them, "for two or three months I can pay you in full." Again the contractor consults his attorney and the

poor man of law advises him that he has the direct lien—the direct lien—that panacea of the worker's lits which palliates but does not sure. "But," assist the contractor, "If as you say it will take me six months to forrectose and your fee will be 15% of the amount of my claim, surely I am hotter off to take 90% of my claim now from the owner," most assuredly he is better off to take and forthwith he goes to the owner and enriches him to the extent of the 10% to which the fraudulent owner has no shadaw of a claim.

My readers will be surprised to know that this practice on the part of the owner is growing to such proportions that the shrewd and unscrupulous make a real business of it. They would laugh at the idea of not realizing some easy money on their contracts, they would scott at the notion of paying their contractors in full. It is their proud boast that they can get their buildings built at absolute net cost without figuring the contractor's and materialman's profit. That \$100 which means the bread and butter of the building trades is slid into the pockets of the owner by the simpliest kind of a trick. What contractor who reads this article will not recall some recent occurrence in his own experience where some such kind of a franci has been perpetrated by an unspeakable owner.

If the reader wants to know why the owner cat, do these things, let him carefully read the Mechanics' Lieu Law, and he will see that there is no penalty whatever attached to the owner's failure to meet his oidigations of court proceedings, which in such cuttons rarely exceeds \$20.00, cost of verifying and recording lien \$1.50, and interest at 7% on the claim.

The Remedy.

The old Mechanics' Lien Law contulned a provision that if the owner unsuccessfully contests a lien he must pay a reasonable attorney's fre to the claimant to be taxed as part of the costs of the action. The Appellate Cuurts of California some years ago declared this provision unconstitutinnal. The new law contains no provision of any kind penalizing the owner for an unsuccessful or frivolous contest of mechanic's lien action. The remedy for the deplorable practices which I have described lies in this Some provision must be written in the new mechanic's lien law which penalixes the owner for an unsuccessful defense to a foreclosure suit on a mechanic's lien. Under present conditions the law is an encouragement to unscrupulous owners to defraud bullders, etc., out of the reward of their work. If the owner were obliged to pay the lien claimant an attorney's fee or a money penalty of any kind the practices which I have adverted to would promptly cease. The contractor could then afford to contest the owner's ultimatum, feeling that will be to some extent compensated for the damage he sustains by the withholding of moneys due him under his contract. I propose to show how

this remedy can be brought about. The theory upon which the Supreme Court of California held unconstitutional the provision of the eld law authorizing the Court to award an autorney's fee to successful lien claim-

ants was that it was violative of the constitutional provision guaranteeing to any person within its jurisdiction the equal protection of the Whether this decision is good law or not is not for me to say. The law stands and must be respected. The decision meant that it was unlayful to say to the owner, "If you lose you must pay the Hen claimant an attorney's fee, but if you win you shall pay your own attorney's fee.' Beyond any question of doubt, if the law had provided that the unsuccessful party in an action for foreclosure of a Dicbanle's lien must pay the fee of the attorney for the other party. The law would have been sustained What objection on the behalf of the building trades exists to the constment of such a provision in our mechanic's Hen law? I can conceive none. If the tien claimant brings an action to foreclose a lien to which he has no legal right let him be penalized the same as we would penalize the owner for an insufficient defense. Under the present law nearly all of the technical defenses are taken from the owner and it will be a rare case where a person who has actually performed labor or furnished materials to be used in the construction of a building would not be legally entitled to foreclose his lien. Under the former law 90% of the cases lost to the lien claimant were defeated because the owner successfully maintained his defense that he owed nothing to the general contractor. All this is now changed and the owner's only real defenses to a legitimate claim are that the work done by the hen claimant was not embraced within or covered by the original contract for construction and that the work done or materials furnished did not enter into the construction of the building.

To impose this burden upon the owner would undoubtedly go far towards preventing recurrences of such actions as I have referred to. If the owner is penalized for a failure to successfully defeat a mechanic's lien for forcclosure brought against him, he will Ulink twice before he will without legitimate cause or reason refuse payment to a contractor on a just claim for the nurmose of forcing the latter to compromise Eurthermore the contractor will be in a position to enforce his claim by law without feeling that he will be a loser no matter which way the cat jumps.

would go even further and enact into the law a provision authorizing the court to fine an owner for a frivolous defense just as is done by the Supreme Court of this State when a party takes a frivolous appeal. If the owner, as is frequently done, contests the claim up to the point of the actual trial, I would have the judge is part of the judgment rendered in the contractor's favor, require the owner to pay a fine unless the parties of the case stipulated that a compromise was reached and that the owner had apparent reason for refusing to pay the contractor's claim in the first instance This would be attacked by many lawyers as special legislation, but I believe it would be sustained on the ground that laborers materialmen and contractors constitute a class which require special protection

With these two propositions enacted into the law I venture the prediction

would be no recurrences of cited. The owner would list in an than the amount of the clober aller out is brought. When we stop to consider that the law requires a person suilty of a breach of contract to pro the damages which the other puris las sustained by reason of the blend there appears to be no real that on why the owner should not pay damages to the person who has performed work on his building and has and received his pay even though such damages are by an antiquated rule of law restricted to the amount of the contract price and interest. If the title were written into our statute books that the measure of damages for breach of a contract to pay money was the contract price and the detriment suffered by the payee by reason of the delay in payment, no lawyer would centure to dispute its constitutionality. The remedy is at hand and it remains for the building trades to see that it is made a law,

THE STATE HIGHWAY.

Facts Concerning Its Construction.

Traveiers on the State Highway where the concrete road is still unsurfaced frequently note the cracks in the concrete and wonder if they are defects in construction. These cracks, according to the Highway Engineer. are not only desirable, but they are economical as well. They take the place of the metal expansion joints sometimes used in concrete highway building, and when the concrete is covered with the bituminous surface the cracks serve a useful and necessary purpose, but are not apparent to the traveler. The ability to do without metal expansion joints in California effects a large saving in construction which is put into additional mularesa

An east and west paved highway of importance to all Californians and to tourists a his come to the State is taking form through the efforts of the California Highway Commission and the compectation of Sacramento, Volo, Napa, Somona, Marin, El Inorado, Napa, Somona, Marin, El Inorado, Solano and Contra Costa counties. The road will ultimately form a main artery across the central portion of the State connecting Lake Taboe with San Francisco and materially shortening the Central Communication of the Costa Communication of the Costa Communication of the Costa Costa Communication of the Costa Cost

A monumental portion of this route will compress 15,000 feet of trestle nervoss the Yolo hypass, now impassible except for a few months of the year. Protective and it will give an appear to its assuments which will connect at boxis with the highway alons the western side of the Sacramento Valley and into Beniral Bids for constructing this Yolo basin causeway will be opened by the Highway Commission fune S.

A stool drive through Contra Costa county will form part of the State county will form part of the State Highway route from Berkeley and Oakland and by ferry from San Francisco, and ext of Sacramento to the State rout will connect to Lake Those and the first. A survey is to be made this most to determine the cost of a

cutoff through Napa and Sonoma countries for an audino rood into Sausalito, thereby shortening the distance into Sin Francisco. This cutoff also serves to open the feetile Napa and Somma valleys and forms a delightful "around-the-hay" scenic tour on which are possible vistis to Napa and sonour resurts, the Politima poultry andustry and the Russian river coun-It will prove a factor in facilitating communication with the points along the northern California coast Napa, Sonoma and Marin countres agree contribute each bonuses totalling \$175,000 to offset the extra cost of constructing the proposed cutoff

That California's State Highway, built and surfaced with State materrals, will maintain a first place in excellance among the highways of America and Europe and prove the superiority of native road-building materral was asserted by Highway Engineer Austin B. Fletcher in a paper Commonwealth Club of San Francisco, in which he said:

"Experiments in the eastern states led the California Highway Commission to consider the bituminous carpets for the California roads. The only essential difference between the work in the East and that here hes in the use of heavy asphalto oil instead of It was not possible to use coal far in California without long railroad carriage and correspondingly high cost for it is not produced here in any considerable quantity. The writer, however, has no regiet on that account

"The bituminous carnets using Callturnia asphaltic oil, on 90 per cent of the work already done, are far superior to his undement to the far and screening carpets of the East which he has inspected. They are also far superlor to the battominous carnets usually apphel to the macadam roads in the East, and he asserts after more than twenty years experience in State Highwas work, that no Eastern State is today getting its State highways confronted so creaply, so thoroughly or untained so satisfactorily as is Cali-

"California started late with its State highways. Its people, with the anged conditions of traffic brought dong by the automobile, are demanding what to all intents and purposes is city street, work out in the country. And California is getting it to all intents and nurnoses

___ UNITED STATES CIVIL-SERVICE EXAMINATION.

ELECTRICAL. TOXICL STORY AND DRAFTSMAN (MALE.)

June 3, 4, 1914.

The United States Cavil Service Commission announces an open competitive examination for electrical engineer and draftsman, for men only, on June 3 and 1, 1911. From the register of eligibles resulting from this examination certiheation will be unide to fill varancies as they may occur in this position, at \$1,200 per amount in the office of the Supervising Arclatect, Treasury De-jortment, Washington, D. C., and in positions requiring similar qualificatrons, unless it is found to be in the interest of the solvier to fill any vacancy by constitutional transfer or promo-

Competitors will be examined in the following subjects, which will have the relative wearhts indicated:

Subjects. 1. Theoretical and practical questions in electrical science covering the subject with special reference to lighting and elevator

work in public buildings) ... 2. Drawing and design (involving ability to design and draw plans, etc. for all apparatus, and machinery connected with electrical work in public buildings) ... Training and experience

Total

Persons who meet the requirements and desire this examination should at once apply for Form 1212 to the United States Civil Service Commission, Washington. D. C. or to the Secretary of the United States Civil Service Board at San Francisco.

Issued April 30, 1914.

SHORT CINCUITS.

Vission of the Puse When the Wires Become Crossed,

"Another short circuit!"

One of the commonest reports heard in all electrical works

A "short circult" means that the electric wires have become crossed or connected so as to form a bapath or shunt of comparatively low resistance through which so much of the electrical current passes as practically to cut out that part of the circuit through which the current originally thowed. In other words a "short circuit" has replaced the normal circuit which may be considered a long circuit. The cutting out of the resistance of the long line permits the power to rush over this path of low resistance, and if the apparatus were not protected by the fuse or circuit breaker the electrical machinery would do itself serious barm

To prevent serious effects from a vidental short circuits of electric lighting wires in buildings a "fuse" is inserted in the circuit just inside the building In case a nail or some other falling object short circuits the electric wires in the house this fuse blows out- nameby melts out-and throws the circuit open so that no electricity can flow through the wires in the house until the "short" has been found and corrected .- New York World,

___ CONSTRUCTION WORK ARROAD.

CITIBLE To Connect British Columbia and Alaska.

The suggestion of co-operation between the United States Government and British Columbia in building railways to connect British Columbia with Alaska has met with general approval in western Canada. Situated as it is between United States territory on the south and north, the extension of railway lines through the Province affording direct railway communication from the States through British Columbia and Yukon Territory to Alaska would be of great benefit to the Province The connection would be through an extension of the Pacific Great East. ern from the Peace River district

the Yukon to the Alaska boundary, This would, however, result in a rather circuitous route, making the distance from the international boundary on the south one of great length to the Alaskan border, but it would seem to be the only feasible route, as the topostapbical formations of portions of the British Columbia coast country is such as to render the building of railways difficult, if not unpossible.

The Government Contract with the Pacific Grand Trunk.

The Pacific Grand Trunk Railway which is constructing new lines and extensive port terminal improvements in British Columbia, has issued a statement denying the report that the company is asking further assistance from the Dominion Government in the way of additional guarantees. In 1903, when the Grand Trunk Transcontinenfal contract was made the Government agreed to guarantee the contpany's bonds at \$13,000 per mile on the prairie section and 75 per cent of the cost on the mountain section, and in 1905 took powers by act of Parliament to guarantee \$70,000,000 therefor. The amount provided, however. is not sufficient to cover the propor tion of the expense guaranteed, and the Parliament has been asked to consider the advisability of taking further powers to provide the Governments proportion of the expense of construction under the original guar-

American Railway to Enter Vancouver. Another American railway, the Chi-

cago. Milwaukee & St. Paul, is endealoring to secure terminal facilities in Vancouver, and will enter into competition with other transcontinental lines for the carrying trade of this port Pending a grant for terminal lacilities, it has arranged to enter over the British Columbia Electric Railway, making connection at Sumas, at the international boundary. The Chiengo, Milwankee & St. Paul has further increased its traffic facilities on the Palife coast by purchasing the Bellingbom & Northern Railway, which runs from Bellingham to Sumas, A carbarge service is operated between Bellingham and Seattle for handling freight routel over the main line to the Middle West, the East, and South.

Municipal Improvements in Alberta. Extensive improvements are to be made at Banff, Alberta, during 1110 coming season. Paving and lighting streets and renairing Government buildings will cost about \$1,000,000, A new sanitarium is projected which will cost approximately \$20,000. While it is given out that a million dollars will be spent this year, it is more probable that the improvements will extend over a longer period. The Canadian Cacific Railway and the Government are jointly concerned in making Banff the national playground of Canada,

Among other buildings that will be tarted in the near future in Medicine Hat, Alberta, are the following: Technical high school, \$300,000, two 8-room grade schools and primary school, \$100,000, hospital and convent \$100,-000; radiator factory, \$100,000; candy factory, \$25,000; immigration hall and addition to Federal Building, \$50,000; and other factories and business blocks which are now being arranged for, besides homes and residences all over the city.

Plans for a ten-story hotel to cost about \$300,000, to be erected in Edmonton some time this year, have just been completed.

English-speaking members of the Roman Catholic Clurch in Edmonton are planning to erect an edifice to cost \$100,000. It will be known by St. Juseph's Church. Work is to begin this spring.

New Hailway in Alberta.

Additional transportation facilities from northern Alberta to Fort William, Ontario, will be provided by the Northestern Railway, whose application for incorporation has just been started by the Domition Government. The line starts at a point southersterly to the Athabasea River, thence crosses close to range 7, or a few miles west of Holmes Crussing, and continues southersterly to Edmonton, thence in example and continues are direction to Camrose and southersterly to the boundary of Alberta.

Municipal Improvements in Edmonton. Edmonton, the capital of Alberta, will have a period of unusual building activity this year, if plans, recently announced, are carried to fulfillment.

A capitalist of Warwick, England, amounced in Edmonton on March 20 that his plans for this year include the erection of a ten-story business and office huilding, costing \$600,000, and a theatre building with seating capacity for 2,500, estimated to cost \$100,000.

The G. A. Puller Co., of New York, reports that work on the superstructure of the \$350,000 arts building for the University of Alberta in Edmonton will begin early in June

The building committee of Robertson Presbyterian College has decided to erect a theological building costing \$150,000 on the grounds of the University of Alberta in Edmonton. It is to be ready for the 1915-16 term.

The Bank of Alberta, recently incoporated under a Dominion charter, will expend \$250,000 in constructing a modern bank and office building in Edmonton, according to an announcement made by a director of the bank.

A Roman Catholic cathedral, mannificent in design and extensive in proportion and costing \$150,000 to construct, will be erected this year in Edmonton just east of the University of Alberta grounds, for Archidshop Legal of Edmonton.

Calgary City Improvements.

The city of Calgary will require \$1.734,600 for various purposes this year, and by-laws covering that sum will be submitted to the ratepayers for ratification this spring. The list is as follows: Parks, \$50,000; waterworks extensions, \$25,000; for department, \$0.000; publicity, \$17,000; exhibition, \$260,000; Centre Street Bridge concrete, \$330,000; Mission Bridge concrete, \$330,000; Mission Bridge concrete, \$77,600; Ninh Street West Bridge (steel), \$60,000; electic light extensions, \$300,000; Hillimrst arbibette grounds, \$60,000; general hospital, \$200,000

The by-laws for the last two items, annely, the new hospital and the purchase of the Hilhurst athletic grounds, have not yet been prepared, and have not passed the council. They may be voted on at a later date than the others.

Building Activity at Windsor.

The Canada Home Construction Co. of Windsor, is considering building 50 or more homes in the western part of

the city, which would mean a great gain over the already large increase in building that has been going on smoothe first of the year. The permits issued by the engager's office for Marchshow an increase of \$25,500 over Marchlast year, and the increase for the institute months of the year 1944 is nearly doubte that of previous year.

Civie Center for Vancouver,

The establishment of a civic center in vancouver, consisting of a group public buildings of artistic design of and forming a nucleus which will later be amplified and enlarged by the addition of other buildings and public improvements, has received the indersement of the commercial and industrial organizations of the city Definite steps will soon be taken to earry the plan into execution. The city owns some available property in the center of the business district and powers of expropriation will be asked of the provincial government to enable the city to acquire land for the civic center scheme

The plan as outlined, in addition to the central buildings, includes the widening and beautifying of streets connecting Stantey and Hasting Parks, located at extreme opposite ends of the city, and the erection of momments and fountains along the thoroughfares radiating from the center and leading to the parks.

The growth of Vancouver and the unprecedented commercial and industrial development of the territory in its immediate environments have been so rapid in recent yours that the energies of the people have been directed to material interests, commercial enterprises, and development schemes, to the neglect of the artistic features or the beautifying of the municipality. The unusual activity in real estate and the rapid rise in values have encouraged the acquisition of centrally located properties in Vancouver for private enterprises and speculative purposes, while the demand for business houses and office buildings has been such as to encourage the construction of edifices to meet an emergency demand at high rental values.

This abnormal condition has resulted in the growth and development of a city possessing great commercial and industrial interests, but lacking in many respects the artistic features of a metropolitan municipality. There are many splendid and not inartistic buildings in the husiness section of Vancouver, but they are so distributed and interspersed among smaller structures lacking in substantial and artistic features that their attractive appearance is lost or negatived in the general ensemble. Telegraph, telephone and overhead trolley wires form a network along the business thoroughfares, and the poles on which the wires are strung obstruct the and give to the long straight streets an unsightly appearance. It is to cor-rect these defects that the present movement for a vivic center has been started.

At the last municipal election the voters of Vancouver approved the plan for a civic center and the location for a new city hall. The plan now under consideration is to use as a nucleus some vacant properties owned by the city and to acquire others either by purchase or expropriation, within a

color bounded by Beatty, Camble, Pender, Howe, Georgia, and Harthurs Streets. This district is in the center of the business section, where the principal thoroughfares converge, and is admirably adapted to the purpose outlined in the plan.

Pacific Great Eastern Railway Extension.

The recent authorization of the Entitsh columbia Legislature for the extension of the Parellic Great Eastern Rattwax from its present objective point Fort George, northward and eastward through the Rocky Mountains to the Prairie Provinces, is one of the most important of recent years in the development of the natural resources of the Province. The road will tap and open up for settlement the Peace River valley country, a territory estimated to contain 31,500 some mules, count to 20,000,000 acres.

The proposed route from Fort George will be almost 140 miles due north, peneliating the Rockies at Pine River, thence traversing the open country 200 miles to the Alberta boundary. The Peace River section of the road will traverse virgin, undeveloped country. Grading will commence in May, and the company expects to have the 330mile streich of track northwest from Fort George to the Alberta line ready for traffic in 1915. The first section of the Pacific Great Eastern, extending from Vancouver to Fort George, tapping the Pemberton, Lillooet, Quesnel, and fort George districts, will soon be completed and carrying the products of that heretafore undeveloped section of Butish Columbia to Pacific coast mark at s

WIIY COURTS ARE STRONGER THAN LEGISLATURES,

Admittedly our courts are our most powerful and capable branch of government. As between the courts and the legislatures this is because our courts are organized better than our legislative bodies.

If the process were reversed—if our legislatures were composed of a few experts in their field, always on duty; and off our courts were composed of a large number of unqualified men, meeting accordingly—our legislature branch of government would be the more powerful.

To maintain the ideal equal balance both should have the power that comes from being capable.

It may be possible to prove that courts make as many mistakes as legislatures. The number of reversals of decisions would indicate it. But the point is that courts even make their mistakes capably. They but this accuse," They have at least a capable machinery that could be used with comminum of humanity's errors. The minimum would be a capable or enhanced the minimum would be a capable or enhanced legislative machinery.

Superficially, the perponderating (almost the overmastering) power of the judicial branch of American government comes from its power to construct the constitution. But it gets its practical monopoly of that power because the eighthrive branch is not fitted to construct the Constitution. Let there be a legislative commission as strong in its

personnel as the judicial "commission" is and they would work together in the construction of the Constitution, Such a legislative commission would build up a "jurisprudence of legislation," use Prof. Charles McCarthy's phrase, as strong as the jurisprudence of courts.

For one thing, there would be far lewer occasions for courts to overturn the legislative work. For another, if a statute were overturned it could be albiost immediately set on its proper bot-

It is well to remember that our courts are now essentially a commission system. The different results attained by them and by our checks and balances system of legislation are instructive .-Kansas City Star.

MISSISSIPPI RIVER BRIDGE TO BE BUILT AT NEW ORLEANS.

It seems that the project of a bridge over the Mississippi near New Orleans, first proposed in 1888, is to be put through. The original design was for a crossing about four or five miles above New Orleans, where no change of hed or banks has occurred in the recorded history of the river span of the cantilever bridge was to be 1.070 feet between centers of main piers, the suspended span being 440 feet long and the anchor arms each 660 feet 8 inches in length. The foundations were to extend to 170 feet below low water and were to rest mon a hed of firm sand. The piers were to be sunk by dredging through open wens or cylinders. The present plan calls for a double deck bridge, one deck for highway and electric railway travel, and the other for railway service .-Scientific American

In spite " the progress of civilization, man remains a fighting animal. Peace societies begin to think they are making progress toward taming his instincts and they are confronted by another was Here is a partial list of the wars of the northern hemisphere in the last sixty years, exclusive of the minor revolts in Northern South America, in Central America and the West Indies and in Africa;

Crimean war, 1854-56,

Sepay mutiny, 1857.

Italy and France against Austria.

Civil war in America, 1860-65 Mexico invaded by Austria and allies, 1861-67.

Prussia and Austria against Denmarck 1861

Seven weeks' war. Austro-Prussian, 1866.

Franco-Prussian, 1870

Russo-Turkish, 1877-78. Servo-Bulgarian 1885

Japanese-Chinese, 1891-95.

Greeo-Turkish, 1897 Spanish-American, 1898.

Filipino-American, 1899.

China against the allies, 1900 Boer war, 1899-1902.

Russo-Japanese, 1904

Balkan states against Turkey, 1912. · Balkan states against Bulgaria, 1913. Mexican war, 1914.

This as has been said, is only a partril list. England has had several small wars, including the important conquest of the Soudan, which are not included, and there have been numerous minor disturbances of one sort and another. But the list includes twenty fair-sized wars, or one every three years.

There has been no falling off in tecent years. Take the last two decades. for instance, and there have been ten wars, or one every two years. .

Perhaps there is some encouraging lesson for the peace societies to be drawn from this fairly bloody record, Perhaps it means that wais are vanishing from the earth. But it would take a pretty incorrigilde optimist to read this prediction in the history of the last half century.

Apparently the world isn't going to be able to get on for some time to come without fighting.-Kansas City

The following account of an educational exhibit in the matter of safety devices exhibited by an Eastern railroad is taken from the Scientific Americant

"Sending a 'Salety First' campaign car over its entire lines, and Instructing its employees in safeguarding not only their own lives, but the lives of the public as well, is the latest development in the campaign of safety waged by the New York Central Railway. This is the first instance of such an exhibit traveling in a railroad car and the instruction given through its equipment is doing much to decrease accidents. The car has been in operation but a few months, and already records show that there have been thirty-five fewer employees killed while on duty than for the same period This, of course, covers of last year. the entire system of the road. As an educational feature, the car is especially interesting to the general public as well as to the employees of the railroad. Its lessons are all strongly impressed upon the minds of the onlookers by a system of Seeing is believing' Models of all machinery used by the company are shown, together with the right and wrong method of guarding dangerous parts. Photographs on one side of the car nicture to the audience unside acres tices of railroad employees. The trespass danger is very forcibly shown by a number of photographs illustrating how persons risk their lives needlessly walking on railroad property Above these pictures is a statement calling attention to the fact that no less than ten thousand danger-defying people are killed on the roads of this country each year. One model of especial interest is that of the modern freight car with all its up-to-date mechanism and safety appliances. Attached to the exhibit car is a coach to be used as the lecture room, and this is equipped with a stereopticon by means of which il-Instrated lectures on safety are given to the men employed by the road.

This shows the attitude that the people are taking toward the idea of conservation of human life. And it seems to be an anomaly that the liability law and safety appliance act in California should meet such violent objection from employers and be looked upon as confiscatory of their property when in reality it looks in the long run to their own benefit.

POMPEY'S PILLAR.

This is the name of a celebrated conumn standing on a slight elevation in the southwest section of ancient Alexandria, a short distance outside the Arabian walls. It is a monolith of red granute of the Corinthian order raised upon a pedestal. its total height is ninety-eight feet nine inches, shaft seventy-three feet and circumference twenty-nine feet eight inches. present name is a mere invention of travelers. The inscription on the base shows that it was erected by Publius. eparch of Egypt, in honor of the Emperor Inceltian A. D. 302. It stood in the center of the court of the serapenm, or great sancinary, of Serapis and survived its transformations into a church and a fortification.-Exchange

LARGE PIER AT OIL REFINERY IS ALMOST COMPLETE.

Capable of accommodating the largest vessels affoat, the new division of the Standard Oil company's quay, 500 feet in length, will be ready for acceptance shortly. The wharf is being constructed at Point Orient for the handling of the increasing Oriental trade.

The total length of wharfage space now controlled by the Standard at this point is more than 1000 feet. The wharf is so constructed as to make it possible to load and unload a vessel at the same time.-Richmond Ind.

CHINA PLANS MUSEUM.

Absorption by America and Europe of many fine specimens of their anment arts has so aroused the Chinese that a proposal has been made to establ sh a national museum in Peking, Unly recently a quantity of ancient paintings, beautiful old porcelain, colored screens, and a hundred cases of jade have reached Peking from the Jel of summer palace. At present these treasures are housed in the Waying hall of the palace, and it is suggested that with those from the old palace in Mukden they would form a substantial nucleus for a museum.

By way of preparation for the heavy travel which is expected in connection with the Panama Exposition at San Francisco, the Union Pacific Rallroad Company has recently placed an order for 54 locomotives costing about \$1,000,-000. Twenty-five of these are of the Parific type, 15 are Mikados and 14 are of the six-connected type. Forty of the locumotives will go to the Union Pacific, 10 to the Oregon Short Line and 4 to the Oregon-Washington line,

EVAPORATION AND STEAM FLOW.

An investigation of evaporation and team flow is being carried out Prof John F Hayford of Northwestern University with the aid of a grant from tle Carnegie Institution. Instead of using apparatus on a small scale to measure evaporation. Prof. Hayford proposes to consider each of the Great Likes in turn as an evaporation pan. evaluate the income outgo tother than evaporation) and change of content of the lake, and from these data to deermine the daily evaporation in its relation to meteorological conditions, Ultimately the knowledge thus acquired will be applied to the study of the laws of stream flow in the United States.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, nower and heating systems, building specialties aware of building materials, power and heating systems, building specialties, every accesssory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

HERE IS NO NEED for you to continually suffer from Catarrh and Cold in the Head. It makes you miserable, doesn't it? You really don't care whether things go right or not and you wonder when you'll ever get over it. And you will not get over it until you get the Clover Leaf Catarrh Remedy, and use it. It will relieve you, and you'll wooder why you had not used it sooner. We are so positive that this will relieve you of your Catarrh or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philadelphia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton,

New York The Ritz-Carlton,

Montreal

The Plaza, Buenos Aires Grand Hotel et de la Plage Guaruja, near Santos,

Brazil
The Carlton, London
The Ritz, London

The Hyde Park, London

The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service—can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninety-one cities in the United States are always at the Architect's call and can assist you in making your elevator—specifications—100—per cent correct.

OTIS ELEVATOR COMPANY

Editorial Comment.

The following account of a fish or whate captured off the coast of Florida is given in the Technical World for May:

After a fight lasting thirty-nine hours, in which five horizons and one hundred and fifty bullets were used, a remarkable momenter was cought of Knight's Key, Florida. According to the scientists of the Smithsonian Institution, it is what its known as a whale-shark, and is believed to be the largest fish ever caught.

When captured this giant weighed thirty thousand pounds, which did not include a porpoise weighing fifteen hundred pounds, which it had swallowed. Its length is forty-five feet. A full-grown man could stand upright inside its stomach.

The mouth of the creature Is more than three feet wide and forty-three meters deep. The tongue is forty inches long, and it has several thousand teeth much smaller than those of a huby. The tail looks like the caudal appendage of an acroplane and is ten feet from the to the. The lidde is three inches thick, and there are no scales. This log whale will be exhibited at the Paramar-Pacific Exposition at San Franceso in 1915 to show what Florida issuing waters produce.

This not only shows there is good isbing in Plorid, waters, but will also furnish an argument for the attrodox clurch people that Jonah could have been swallowed by the wide. So if he lived for three days inside and be could withstand the action of the gastic arisk of the levianthan's stomach, he would have been able to come out alive. However, it is about time to quit disputing about myths and let everybody believe these old stories as he sees fit.

Electrical from and steel production in Sweden has been on the increase As to the within a recent period. amount turned out in that country, startling with 122 tons in 1908, it rose to 870 tons in 1910 and 18,000 tons in 1912, or the last report. There are upwards of 20 electric furnaces running at present, using in all some 60,000 horse-power. New furnaces are building at Lofoten, Gelivara and Sandviken. The Stora Kopparbergs Company recently purchased a waterfall which gives 150,000 horse-power, and is to build new furnaces in the near future. As regards chrome steel, a new plant was put in use not long ago at Trolhattan with two electric fornaces, which reduce one imported from New Caledonia and South Africa, usung the three-phase system. The product contains from 5 to 9 per cent chromium.

und is furnished in four different grades,—Scientific American.

Long after the looting of the New Bayen Bailtond comes the delayed eximmution of the methods employed. And long after J. P. Morgan and the others involved are laid to rest comes the ghost of these transactions to haunt the memories of the Wall Street inancier. Most people who had the and independence to think knew all these things before. But the majority of people were so hide bound by political prejudice that they allowed the priests of the temple of finance in rob them of their birthright and were anxious to assail any one who had the termerity to criticise these ministers in the money temples.

When these great financiers are stripped of their power and the stean roller that the people have given them is taken away how small they seem in comparison to their former selves, in fact the claim of some of them to enthence is chiefly due to the fact that they managed to keep out of prison and in many cases that was owing to the fact that they were never proscented.

One thing that Thomas W. Lawson did for the public was to put his tinger upon the particular facts of tottenness in the financial dealings of the high priests in the temple of money, His "Frenzied Finance" riveted the popular attention on particular transactions. And his literary style made readable a lot of facts that would have otherwise proved to be uninter-So that while Lawson claims esting no particular virtue himself he did state the facts in such a way that the mask of many a smug financier was torn away and he stood revealed in what he really was, the while he assomed a pharasaical virtue that he had not. As the years go by and the methods by which these money kings sequired their millions are exposed the only thing to be wondered at is that intelligent people stood for the system so long.

The latest news reports state that Huerta has agreed in resign. much of truth there may be in this remains to be seen. It however has this one thing in its favor and that is that Huerta has repeatedly said be will not resign. Which probably means that he will. If he does resign and leaves the country one stumbling block will be removed in the way of establishing order in the country. But it will require the protecting hand of stronger governments to establish any kind of a stable government in that forsaken land amongst a people that have no stability of character or industry.

The Conservation Of Fuel and Efficiency In Power Production.

By Perelval R, Moses in The Isolated Plant.

Nine numbed per cent waste in the manufacture of power seems to be an incredible statement, yet if the average power plant is studied the per entage of waste will be found to be more nearly two thousand per cent than nine hundred. This condition is startling and, the all matters connected with the conservation of natural resources, so traught with importance to the future of the Race that it will over suppliessis.

It is only in the manufacture of power peads for use that such immense waste occurs. In the transformation from mechanical to electrical power, and in the utilization of the energy delivered electrically to motors, an such loss occurs. In large motors, a seven per cent waste may occur, which may increase to twenty per cent in small lightly boiled motors; but the important loss is at the start—in the transformation of the latent energy in the fine into mechanical, useful energy.

This waste is going on every minute of every day in indiroad becometives, central railroad power and lighting stations, and in private power plants in factories and buildings. Every electric light simals to the engineering mind that for every similed unit of energy actually transformed into light, between two and brech unitdiced units have been bost irrefrequently, and for every unit of energy transformed into mecanical or electric power, twenty to thirty units have been lost.

All this loss is as much a waste of the world's resonrces as the losses due to hie earthquake or war; and the cay young blood throwing away thousands of dollars for an evening's amusement is no more a spendthrift of the world's capital than the manufictures of light electricity or mechanical power, nor is he any more culpatide Part of this waste, it is tine, is unavoidable with our present knowledge and apparatus. The transformation of electric current into light is still, notwithstanding the great advances of the last five years, a most Inefficient process. Such losses due to our lack of complete knowledge

means are massociable and we rather described to the doing as well as we have done instead of blame, but in the transfermation of the energy contained in foel into mechanical power and electricity, we are not so blameless.

We know—at least every technically trained engineer knows that part at least of the present waste is easily avoidable, and the only factor which prevents the stopping of the waste in the selfish interest of the individual. Millions of dollars have been spent in perfecting bodiers, furnaces, engines and electrical appliances with the long of teterring that efficiency a few percent. Whole stations have been exceed to the stations have been exceeded by the stations have been controlled to the stations have been leveled and mountains tunneled to increase trans-

portation efficiency a few per cent, and millions upon millions have been spent in straightening curves with the same idea.

These are private enterprises and in each case there was a direct benefit looked for corresponding to the investment. The State must expect to obtain its benefit from the conservation of natural resources in the more or less distant future, but unless it does plan abead as rathroads plan their terminals, it will be bankrupt when that time arrives.

Is it not time that the state step in and demand that selfish interest be subordinated to the general welfare? It would seem to be high time, for our anthracite resources have been estimated to last only a hundred or so years, and even our bituminous fields must in time disappear. It is not alone the exhaustion of our fuel beds that constitutes the waste. This is, perhaps, but a small proportion of the world's loss. Its greatest loss is the waste of labor in mining unnecessary gantities of fuel and in the labor or materials required to pay for the fuel unnecessarily consumed

The army thus employed to supply this country's fuel waste is almost as great a loss as a standing army in times of peace, because in each case the labor thus wasted would be otherwise usefully employed in developing the wealth of the country. Although the fact that this waste is easily avoidable is generally known, the methods are not perhaps plain to even the trained engineer, nor is the differonce between the interest of the Individual and of the community clearly defined, and it is the purpose here to clarify these conditions,

The waste in transforming the latent energy of fuel into mechanical power, from which it may again be transformed into electricity, occurs to the greatest extent where steam is used as the medium for effecting the metamorphosis. In the ordinary electric station either for lighting or railroad service, equipped with modern apparatus, the fuel burned under a set of builers transfers from 70 per cent to 80 per cent of its energy into the water contained in the boilers, changing this water into steam which, as its egress from the holler is restricted and as additional quantities are being continuously added, increases its pressure until the outflow equals the quantity manufactured, when the pressure remains stationary. As is well known, in changing from water into steam nearly twenty times as much energy is stored as in increasing the pressure of the steam from one pound per square inch to one hundred and fifty pounds per square inch. When this steam is led to a steam turbine or steam engine, it drops in pressure but still retains the energy stored during the transformation from water into steam so that only that portion of the fuel's energy is utilized which was stored during the increase of pressure. This

performance is greatly improved by the use of a condense, allowing the drup in pressure to continue below the pressure of the atmosphere, and by this means the amount wasted is reduced from about two thousand per cent to around one thousand per cent. In particularly highly efficient plants the balance of the energy wasted goes out with the water used for condensing purposes.

If the steam after passing through the turbines or engines would be used to furnish heat for manufacturing purposes or for warming of buildings, the greater part of this waste would be avoided. The reason that this is not done more than it is, is that it does not pay the company operating the central plant to distribute this steam because such plants are usually placed away from the location of hig buildings on account of the high value of real estate near such buildings, on the one hand, and on the other hand because of the low rost of delivering fuel to stations along the water front or near the railroad. Such location makes the investment for steam or hot water mains too great for the probable returns from the sale of heat, so the waste from a strictly commercial viewpoint seems necessary. This matter will be discussed more fully later on but, first, other transgressors should be mainted out

A great proportion, possibly half of the larger buildings and nearly all separate mills and factories, have their own power manufacturing plants, usually known as isolated plants to distinguish them from the central electric stations. These plants are frequently highly efficient during that pottion of the year in which the steam, after doing its work of driving the engines, is more or less fully utilized in warming the building or in evaporating or drying processes. In some mills where great quantities of steam are needed all the year for dyeing or drying, such as finishing mills, steam laundries, hat factories, sugar mills, etc., the fuel energy transferred to the steam is fully utilized and the only waste occurs in not burning the fuel thoroughly and in the radiation from steam pipes.

Little fault need be found with such plants from the point of view of conservation of resources, provided the easily preventable wastes—frequently found are prevented.

The steam supplied by isolated plants not situated so as to be able to utilize the energy contained in the waste or "exhaust" steam is usually most inefficient energy transformer during the warmer season, and in this period the losses are anywhere from three thousand to five thousand per cent of the energy utilized electrically These isolated plants or mechanically. in many cases do distribute steam to their neighbors where they can, but the number of instances where this is done is insignificant and the period when the supply is needed is restricted

These isolated plants could be equipped with apparatus for the transformation of the energy in the fuel into electricity or mechanical power. far more efficient than the usual apparatus, and the sole reason with they are not so equipped is that it does not pay the individual to do so, he Germany for some years this problem has been recognized and all over to Empire will be found the suscelled "lokomobiles," consisting of louise and engine mounted together, the holler operating at high pressures with -team superheated many hundreds of degrees. with the result that instead of using from eight to fourteen pounds of coal in practice to make a kilowatt of electricity for a perod of one hour, these plants use from two to three bounds of coal with a corresponding reduction in labor of firing.

A great number of engines operating like automobile engines without the interpolation of steam, have been developed for transforming the energy directly from the fuel by burning it in the cylinder of the engine Where the fuel is coal, such engines are known as producer gas engines the coal being gasified in an iron -hell. brick lined, termed a producer. After cleaning the gas is burned in the engine cylinder. The losses in this type of plant, due to heat going out with exhaust gases, heat carried away by the water used to cool the cylinders, and radiation losses, may be from 400 to 500 per cent of the energy actually available as electricity; but even with this waste only two pounds of roal are used to supply one kilowatt for an bour, instead of from eight to four-teen pounds. Where oil is the fuel, the engines are of the Diesel type where the oil is injected into the engine cylinder into a highly compressed body of air heated by the ompression. The oil burns and transforms the latent energy in it into available mechanical energy, which in its turn is transformed efficiently into electricity. This type is even more efficient than the gas engine operated on producer gas, and the waste may only be 350 per cent of the useful energy. Part of the waste of heat in exhaust gases and jacket water of gas and oil engines may be avoided by using these to heat water or make steam for warming, drying or evaporating purposes, thus increasing the efnciency by 35 to 40 per cent.

The great increase in efficiency of fuel utilization made possible by the distribution of the property of the

With these wonderfully efficient engines available, why are they not universally used. This query arises unavoidably. There are many answers. Formerly, unrellability, need of special knowledge, lack of standardization—all these and many other charges—were filed against gas and oil engines, but experience and development have put these aside and the real reason

that they are not universally used is that it does not pay the individual well enough to do so. They are being used widely and, in places where the mapufacture of power is the main consideration, they are rapidly taking then correct place; but in the factory of building where steam is required for part of the year the owner does not wish to incur the double expense nor to give up the extra space required for the gas plant in addition to the steam plant. He frequently objects to two kinds of power equipment and fearthe extra, though somewhat imaginary, complication.

ary, completening thus far that, during the senson when steam is required for heating, the enormous lightly developed central electric station may be and frequently is bees efficient in suffilization of fuel than the private power plant, because of its inability to use the by-products of the manufature of power. On the other hand, the private power plant, unless equipped with the modern high efficiency location of the product of the manufature of a second light of the private power plant, unless equipped with the modern high efficiency location of the product of the pro

One remedy is clearly apparent. It the central lighting stations could transfer part of their work to the privote plants during the heating season, and the owners of the private plants transfer their toad to the central station during the warm season, the effictioney of both in the utilization of fuel would be greatly improved. There is still another period when such transfer might profitably (from the standpoint of the community at least) be made. The use of electricity varies with the time of day and season of the year. It is greatest around 4 to o'clock at night during December It is least during the and January. early hours of the morning

When power plants operate at much below the capacity for which they are designed, they fall off rapidly in efficiency, so we are confronted with the fact that except during heavy head periods the efficiency is far below the standard. If the private plant could transfer its load to the central station during its inefficient period except during times in which steam would be required for heating—in the early morning—the efficient utilization of fuel would be still further increased There are no electrical difficulties in the way of such transfers, yet they are not made and such plants continue to struggle along under the handicap of excessive waste and our resources contime to be thrown away.

Why? Because there is bitter rivalry between the central electric and the private power plant. The central electric station sees what it considers to be the inevitable growth of larger and larger buildings to supply these even at very low prices for electricity, and as its only competitor is the private plant it seeks every means of destroying such plants, and where it can do so refuses co-operation if it thinks co-operation will aid the growth of such plants. In other words, the central electric station has not cooperated with the private plant because it has not thought that, taking all things into consideration, it would pay to do so.

The private power plant owner, even where he can obtain service from a

and station to supplement his own to does not utilize the central an service when he should do so the viewpoint of conservation, see it does not pay him to do so at a price charged for electricity.

We have, then, the situation in a nut-Part of our natural resources and of our resources of capital and on are being squandered because it does not pay the individuals to save them. Should not the State step in and say, "Here, Messrs, Power Manufacturers, we are willing you should continue to make power or electricity or steam, but you must do it efficiently even if you lose something by doing so. Hereafter, no one shall be allowed to make power except in the most efbelent way. We will establish an Ethetency Board to pass on all plans for power manufacture. You will be requared to use such types of apparatus as will keep the use of fuel down to a We shall establish rates minimi which will make it less burdensome for you, Mr. Private Plant Owner, to sidd down your plant when it cannot be run efficiently from our point of view of conservation of fuel. Where it is possible to do so, we will require to Central Electric Stations to distribute their steam for heating, even if they don't make much money by so doing, and if the conditions make this impossible we will require them to cooperate with Private Plants during the winter season so as to fully utilize the capacity of these plants for the supply of electricity and steam to neighbors and thus avoid double use of fuel for making electricity and for making Leat

This is what a state would bave to do if the end of its natural resources was in sight. Is it necessary for us to want until then or shall we do it now and put off that evil day? the matter is not a theoretical one or one of minor importance. In the city of New York alone the avoidable fuel wastes from the great central stations is enough to heat all the large buildings not already provided with private plants and will probably approximate six hundred toousands tons a year. If to this is added the waste due to inefficiency of the thousand odd plants of the city, we would find that the total avoidable waste would be over a million tons a

Tittak what this would mean anplied to the whole country. Imagine the labor saved in mining, transportation and firing of this fuel; in removing ashes and in capital expendi-Our municipalities already insist that water shall be used economreally, even if it is paid for on a meter basis, and the Nation no longer permil- its forests and streams to be lavislds destroyed. Other nations regulate the methods of cutting timber and mining coal, so that unnecessary waste will be prevented; so this plea for efficient production and enforced cooperation would not seem to be entirely without warrant.

Firms destring news on special classes of buildings, such as Banks, Churches, schools, Hotels, etc., will find such items all classified and grouped under proper hendings, commencing on this page. These same items are again repeated under "LOCALFITES" in the last part of our news denartment.

APARTMENT HOUSES.

SAN FRANCISCO Apartment house, 6 story and base Class C construc-tion, \$65,000. Architects, Rousseau & Rousseau, Monadnock Bldg. S owners. Roussean Realty Co. The building will be elected on the north side of Bush street west of Stockton, having a frontage of 10 feet and a depth of 7612 feet. There will be a total of 36 apartments of two and three moms. Interior finish will be of pine with elm panels, hardwood floors and beam ceilings. Plans provide for steam heat, elevator service and a vacuum eleining system. All suites thous and wainsent. Entrance will be will baye wall beds and private bath rooms. Bath rooms will have tile huisued in matole and tile Exterior of the building will be faced with pressed back trimmed with terra cutta. Plans are complete and excavating has been started, Carpentry work will be done by Day Labor. All other parts of the work will be let by contract. Inds will be taken at once,

SAN FRANCISCO-Apartment bouse. 7 story and base brok and steel Cost not stated. An bitect. Bent G Me-bougill Sheldon Bldg S F Owners. Henry A Voorman as gualdian. The building will be created at the northwest corner of Busy and Mison streets and will cover a considerable ground area. There will be a large number of two and three room suites, all with private both room and wall beds. Interior will be finished in some with some hardwood panels and veneer. Plans provide for sterm heat, elevafor service a vacuum cleaning system and lot water supply. Bath rooms will have tile wains of and composition floots. Entrance will be finished in marble and tile. Exterior of the outlding will be faced with pressed ank. Plans are complete and a gencraft contract will be let shortly. Arthur Ariett I'as secured the contract it \$7,350 for idam and reinforced conrete foundation work.

SAN FRANCISCO Apartment bouse a story and base reinforced brick assum Architect G. Albert Lanstungh, 709 Mission street S. F. Own-ers, Gaffiny Estate. The building will e ere ted on the north side of Sutter street between Taylor and Jones streets leaving a frontage of 60 feet and a depth of 137% feet. Apartments will be arranged in suites of two and talee tooms with wall leds and private bath rooms. Interior finish will he of pine and elm panels with some oak floors There will be steam heat elevator service and a bot water supply. Pat a rooms will be finished in tile and will have composition floors Exterior of the building will be faced with pressed back. Plans are comolete and biguies are being taken,

OAKLANI CAL — Apartment house, story and lave firme. Cost not stated. Architect M. L. Newson, 1852 5th avenue colkland covered A Savoda. The huilding will be creeted an 4th avenue near East 18th street, and will contain a number of two and

three room suites. Interior finish will be of pine with some elm panels and oak thours. All apartments will have private bath rooms and wall beak. Bath rooms will be finished in tile and will have composition floors. Plans provide for a hot water system. Entance will be finished in marble and tile. Exterior of the building will be covered with cement plaster on metal lath. A brick veneer base will be used. Plans are complete and figures are now being taken on the work.

SAN FRANCISCO-Apartment house 5 story and base, reinforced concrete. \$60,000 Architect, Edward F. Helms, 5th avenue and California street, S F. Owner's name withheld. The building will be erected on Pine street near Taylor, and has been designed to contain to suites of two and three rooms. All apartments will have wall beds and private bath rooms. Interior finish will be of pine with some elm panels and oak floors. Plans provide for steam heat, elevator service, a hot water system and portable vacuum leaning. Bath rooms will have tile wainsent and composition floors. Entrance will be finished in tile and marble Exterior of the building will be facel with pressed brick and terra cotta. Plans are being prepared.

SAN FRANCISCO-Apartment house. 4 story and base, reinforced concrete, \$26,000. Architect J. C. Hladik, Mon olnock Bldg, S F. Owner, J. E. Relte. The building will be erected at the northwest corner of Franklin and Fulton streets, covering an area of 40% to \$2 feet. The building has been designed to contain sixteen suites of two and three rooms, all of which will have private baths and wall beds. Interror finish will be of pine with some elm panels. Bath tooms will have tile wainsout and composition floors. Plans provide for steam heat and a but water system. Entrance will be finished in tile and marble Exterior of the building will be faced with cement plaster. Plans are complete and segregated figures are being taken,

BANKS.

SUISUN, SOLANO CO., CAL-Bank, Class C construc-L story and base tion \$15,000. Architect, O. R. Thaver, Merchants' National Bank Bldg., S. F. Owners, First National Bank of Sui-The building will cover an area of 24 by 74 feet and has been designed with foundations and exterior walls of sucient strength to carry an additional story. Interior will be arranged for a large public space, banking work space, president's office and directors' rooms. Interior finish will be of pine. oak and mahogany. Marble and tile with ornamental plaster and ornamental iron and bronze will be used extensively. Plans provide for comand safe deposit vaults. Exterior of the building will be faced with red pressed brick. Large granite column and pilasters will be used. Plans are complete and work has been started by Day Labor. Some subcontracts will be let through the owners.

BRIDGES AND DAMS.

SAN JOSE, SANTA CLARA CO., CAL.

Brilge, reinforced concrete, Cost not stated. Engineer, County Surveyor J. G. McMillan, San Jose, Owners, Sac, Owners, Sant Clara County. The Beldge will be executed over Penetenola Creek neverted over Penetenola Creek never and Minn Rock avenue. Plans have been completed and figures are now being taken. Bids will be opened by the Board of Supervisors on June 1st. Plans and specifications can be secured from the County Clerk.

MADERA, MADERA CO., CAL-Bridges, reinforced concrete and wood. Cost not stated. Engineers, Federal Engineering Co., Central Building, L. A, associated with County Surveyor T. E. Smith, Madera, Owners, Madera County. Bids will be received by the Board of Supervisors of Madera County up to 11 a. m. of June 2nd, 1914, for the erection of seven reinforced concrete bridges in accordance with plans and specifications prepared by the Federal Engineering Co., Central Bidg., L. A. Plans may be obtained at the office of the engineers or from the County Surveyor T. E. Smith of Madera. The structures include two 3-hinge arch bridges-one 145 feet long consisting of two spans over Walker Creek; one 133 feet long of two spans over Gold Creek: and the following concrete girder type bridges: One 600-foot structure over Ash Slough, one 200-foot structure over Cottonwood Creek, one 140-foot structure over Cottonwood Creek, and 50 and 70-fot structures over creeks south of Berendo. R. W. Curtin is County Clerk. Bids will also be received by the Board of Supervisors up to 11 a. m. of Monday, June 2nd, 1914, for constructing a wood and steel bridge 180 feet long over Chowchilla Creek, and also a wood trestle bridge in accordance with plans and specifications on file in the office of County Surveyor T. E. Smith.

STOCKTON, SAN JOAQUIN CO., CAL.—Bridge, reinforced concrete and steel. Oost not stated. Engineer, City Engineer, Stockton. Owners, City of Stockton. The City Engineer has been instructed to prepare plans for a reinforced concrete bridge to be erected over the Mormon Channel at Sutter street. Working drawings will be completed at rapidly as possible and figures will be taken. Further mention will be made of the work.

DAVENPOUT, SANTA CRUZ CO., CAL — Wharf, timber construction, Cost not stated. Engineer's name not of agiven. Owners, Santa Cruz Portland Cement Co. Representatives of the Thomson Bridge Co. of San Francisco were in Davenport recently taking soundings for a large timber pile wharf which will be erected by the Santa Cruz Portland Cement Co. The structure will be in the neighborhood of 1500 (cet long.

Contracts Awarded.

HENDERSON, SHASTA CO., CALBridge, steel and concrete, \$7,000. Ensineer, County Surveyor, Redding,
Owners, Shasta County Contractor, M.
B. White, Stockton, Contract price,
\$6,125

REDDINI, SHASTA CO, CAL— Eridge, steel and concrete, \$19,650, Engineer, City Engineer, Redding, Owners, City of Reidling, Contractors, Chico Construction Co., Chico Contract price, \$13,650, Other bids submitted were as follows: Ross Conmitted were as follows: Ross Construction Co., Sacramento, \$57,777; F. Rolandi, San Francisco, \$53,450, W. N. Concannon, San Francisco, \$52,785.

CHURCHES.

FRESNO, FRESNO CO. CAL. -Church, 1 story and base, buck \$30,000. Architect, H. F. Starbuck Fresno Owners, German Free Lutheran Church of Fresno. The building will be erected at the corner of F and San Diego streets and will cover a considerable ground area. There will be a large main anditorium and Sunday rooms, pastor's study and social rooms, Interior will be finished in pine with some ornamental plaster. There will he a central heating system. Exterior of the building will be farest with pressed brick. Plans also include art glass windows. Plans are now being prepared and figures will be called for shortly.

COURT HOUSES.

PORT ANGELES, CLALLAM CO., WASH .- Court House, 2 story and base, reinforced concrete, \$50,000 Architect's name not given. Owners. Clallam County. The building will be of fireproof construction with reinforced concrete walls and floors. Interior partitions will be of metal lath and plaster. Besides the offices for the various county officers the building will contain a large meeting room for the supervisors, two court rooms and the the county jail. Interior finish will be of pine and hardwood. Fireproof vaults will be installed. Plans provide for steam heat and a hot water system. Exterior of the building will he faced with cement plaster Plans are now being prepared

Contracts Awarded.
ALTURAS, MODOC CO., CA CO., CAL -Court house, 2 story and hase, reinforced concrete, \$90,000, Architect, F J. De Longchamps, Reno, Nev. Owners, Modoe County. Contractors. W. N. Con-cannon Co., Monadnock Bldg. S. F. general construction only. Contract price, \$81,444. Plumbing and heating awarded to Jacob Meyer, Reno, Nev. Contract price, \$7.596.

FACTORIES & WAREHOUSES.

OAKLAND, CAL.-Warehouse, tanks, etc., frame construction. Cost not stated. Architects, Righetti & Headman, Phelan Bidg., S. F. Owners, Pinal-Dome Refining Co., Livingston street, Oakland. Included in this work will be a large warehouse, steel and concrete tanks, reservoir, office building. loading shed and a garage. Except for the tanks and reservoir all construction will be of frame and corrugated iron. Plans are being prepared and when complete the work will be done by Day Labor.

PORTLAND, ORE -Factory, 4 story and base, brick, \$90,000. Architects, McNaughton & Raymond, Title and Trust Bldg., Portland. Owner, Oscar Heintz. The building will be erected on the East Side, overing an area of 100 by 200 feet. Interior finish will be of pine. Plans provide for two large freight elevators, automatic sprinklers, metal window sash and frames and fireproof doors. Exterior will be faced with stock brick. Plans are

complete and figures will be called to shortly.

Contracts Awarded. SEATTLE, WASH.—Warehouses, 2 1 story, frame and concrete, \$105,117 A) chitect, Port of Seattle Commission Seattle. Owners, City of Scattle Contractors, Dow & Ryden, Melhorn tible Seattle. Contract price, \$105 147.

-FLATS.

SAN FRANCISCO-Flats, 3 story and base, frame, \$8,000. Architect, Paul 16 De Martini, 2123 Powell street, S. F. Owner, Mr. Shibeley The building will be erected on Ruch street near Fourth and has been designed to contain three modern flats of five and six rooms. Interiors will be finished in pine and redwood. There will be open fire places in the living rooms with tile mantels. Bath rooms will have the walnscot and composition floors. Automatic water heaters will be 111.stalled. Exterior of the building will be covered with rustic and shiplap. Plans are now complete and figures are being taken. A general contract will be awarded.

SAN FRANCISCO-Flats and store. story and base, frame, \$7,000. Architect, William Mooser, Nevada Bank Bidg, S. F., Owner, T. H. Frederickson. The building will be erected on the west side of Fillmore street north of Union, and will have one store on the ground floor and a seven-room flat above. Interior will be finished in pine and redwood. Some oak floors will be used. There will be open fire places and tile mantels. Bath room will have tile wainscot and composi-An automatic water heater tion floor will be installed. Exterior of the building will be covered with rustic and cement plaster on metal lath. Plans are complete and figures are being taken.

SAN FRANCISCO-Flats, 3 story and hase, frame, \$9,000. Architect, Paul F. De Martini, 2123 Powell street, S. F. Owner's name withheld. The building will be erected on Union near Taylor, and has been designed to contain three modern flats with a private garage Interior finish will be of pine and hardwood veneer. Oak floors will be used in the principal rooms. Plans provide for open fire places and tile mantels. Automatic water heaters will be installed. Bath rooms will have tile wainscot and omposition floors. Entrances will be finished in tile and mar-Exterior of the building will be covered with rement plaster on metal Plans are now being prepared. lath.

SAN FRANCISCO-Flats, 3 story and base, frame, \$5,800. Architect, Paul F De Martini, 2123 Powell street, S F. Owner, Mr. De Martini The building will be erected at the southwest corner of Auburn and Pacific streets, and has been designed to contain three small flats. Interiors will be finished in pine and redwood. Hardwood thours will be used in the principal rooms. Each living room will have an open fire place with tile mantel Bath rooms will be finished in tile wainscot and will have composition floors. tomatic water heaters will be installed Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and figures are heing taken.

LOS ANGELES, CAL.-Hotel, 4 story and base, brick and steel. Cost not

od. Architects, Walker & vawter. Hall The building will be erected at i northwest corner of Sixth and Wall streets, covering an area of 79 1 120 feet. Plans show four stores on the first floor besides the hotel entrance and lobby. Upper three floors will contain a total of 110 rooms and baths. Interior will be finished in one throughout. There will be steam reat, a hot water system and elevator service. Bath rooms will have tile warmscot and composition floors, Patent state fronts are specified. Exterior of the building will be faced with pre-sed brick. Plans are complete and contract will be awarded on the percentage basis.

SAN FRANCISCO-Flats, 2 story and base, frame, \$5,000. Architect, none tiwner, A. Petry, 226 Pierce street, S. The building will be crected on the west side of 11th avenue south of Cabrillo, having a frontage of 25 feet and a depth of 61% feet. There will be two modern flats of six rooms each. Interiors will be finished in pine and redwood, Hardwood floors will be used in the principal rooms. There will be open fire places and tile or brick mantels. City Bids Opened.

Bids for the Construction of the New Cnaper School Opened, C. L. Wold Will Get the Job,

Bids were opened at the regular Wednesday afternoon session of the Board of Public Works for the construction of the new Cooper School, for the plumbing, heating and ventiliating, electric work and for furnishing approximately 1,000,000 virified brick.

C. L. Wold was low man of the threedifferent propositions for the general construction of the Cooper School. The electric work will probably be awarded to The Central Electric Co., the plumbing to Herman Lawson and the heating and ventilating to J. E. O'Mara

Only one bid that of the Denny-Renton Clay and Coal Co. was received for the vitrified paving brick. Their bid was for \$13.50 per tho (sand.

The Cooper School is a two-story and basement reinforced concrete building, and was designed by Architect Houghton Sawyer, Shreve Bidg. Following is a complete list of the hids as opened

General Construction, Cooper School.

Bidder	Prop. 1	Prop. 2	Prop. 5

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials named and kinds of building materials, power and heating systems, building specialties, every accesssory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

HERE IS NO NEED for you to continually suffer from Catarrh and Cold in the Head. It makes you miserable, doesn't it? have taken over the following agencies formerly represented by the above companies.

"Dupley", "Ideal" and "Van Dorn" Steel Joist Hangers, Post Caps and Bases.

"Paschall" Sidewalk Light Construction
—All kinds.

"J. C. E. Welsh Quarries-For Floors, Mantels, etc.

"Universal"—"Anti-Slip" and "Carborundum" Safety Stair Treads.

indum" Safety Stair Treads.
"Kinnear," Steel Rolling Doors and

Shutters.
"Dririte" Cabinet Laundry Dryers.

"Fenestra" Steel Sash-For Factories, Garages, Schools, etc.

"Drouve" Straight-Push Window Operating Devices.

"Drouve" Anti-Pluvius Skylights.

"Grant" Pulleys, Pivot Lifts and Casement Devices.

"Turner" Drawer Sildes.

"Home" Safety Window Guards.

"Merritt" Steel Lockers and Shelving-For Garages, Schools, Gymnasiums, etc.

"Phoenix" Sanitary Metal Tile — For Bathrooms, Kitchens, etc.

"American" Rotary Vacuum Cleaning Plants—For Office Buildings, Residences, etc.

"Hill" Clothes Dryers-For Yards, Balconies and Roofs.

"Hustler" Ash Sifters-Save Coal.

"The Window" Coal Chute-Ornamental and Necessary.

Asbestos Theatre Curtains.

"Beaver Board",-The Superior Modern Wallboard.

"Cabot's" Deafening and Sheatbing "Quilt."

Building Papers, Deadening Felts, etc., of all kinds.

"All-Metal" Doors, Windows and Trim.

"Liquid Stone", The Paint Eternal.

"Wainright" Concrete Curb and Corner

"Graphilatum" for Roofs.

"tterringbone" Expanded Steel and Ingot Iron Lath.

"Hannon", "Hub" and "Goodwin" Metai Corner Bead.

"Best's" Keene's Cement—For Gauging Plaster and Finishing.

"Caenstone" Cement-For Making Artificial Caen-Stone.

"Victoria" Keene's Cement (Imported) For Artificial Marble and Tile.

"La Farge" Non-Staining Cement.

"Cabot's" Mortar Color Pulps.

"Whalebone" and "Crimped" Metal Wall Ties.

"Rutty" Metal Wall Plugs

"Hercules" Waterproofing Cement Compounds.

"Cabot's" Mortar Color Pulps.

"Cabot's" Creosote Shingle Stains.

"Cabot's" Cement and Brick Waterproofing Stains.

"Cabot's" "Conservo" Wood Preservative.

"Con-ser-tex" Canvas Roofing - For Sleeping Porches and Decks.

"Rubber-Mica" Ready Roofing.

"Rextile" Rubber Shingles.

"Diamond" Ball bearing Door Hangers.

"Metalcrete" concrete Hardner.

"Ironite" concrete Hardner.

Wood rolling doors and partitions.

Venitian Blinds.

"White House" Kitchen Furniture.

A number of new agencies will shortly be added to the above list.

Editorial Comment.

The agrandance has been used in the last three wars that have occurred and so far it has not demonstrated any particular ability as a lighting machine. The Italians used it in their war with Tripoli and the Bulgarians and the Turks used it in the conflict in Southern Europe. It proved to be valuable scout as it possesses all the qualities of such an accessory to an army. It has speed almost unlimited It has the range of vision and can ascend to heights that make it almost invisible itself. But as a bomb-thrower its destructive folce is very limited In the first place its carrying power is very limited. And the vibration of the machine makes it almost impossible to drop a bomb or fire a gun with any degree of a curacy So that white a bomb toat is dropped may kill some of the enemy at the same time it is no more effective than a mortar shell that might be dropped from a battery a couple of miles away.

The derigible halloon that the Germans have perfected recents to be more effective in this regard. While having less speed it has no vibration in its car and can be used effectively to prevent acroptanes from coming into its territory. It is, after all, a strange thing to watch the progress of mankind and then to contemplate the perfection of modern engines of war devised for the destruction of their people who happen to inhabit a different political division of the country.

It appears that there are not sufficient names on the referendum petition to prevent the construction of the depot at Tibrid and Townsend Streets. As the time for filling the petition has expired there is every reason to hope that the structure will go on and that there will be some accommodation to the public who will vist us next year.

The State Railread Commission is our great help in time of need, No longer can the Southern Pacific snap its fingers in the face of the public and on as it pleases, give accommodations or not and hold in the people at every turn. The Commission must now as shown, and the heads of the several departments of the Railread Company are not the insolent autocrats they were in former years.

The referendum like most of our other laws is designed to protect the neople from those who would do wrong. It is a sufequared throughout wrong, It is a sufequared throughout or around the emoction of laws and tree granting of franchises. And while was sometimes be used for improper purposes it is a good string to have on such legislation, as oftentime it prevents jokes from being stipped ovents for head of the people and improper advantage taken.

The more effective feature of the war against flies would be not their apture, but the measures to be taken to prevent their existing. All flies must die in the course of time, and the ones that die in traps are hardly missed in the world of Bydom. Those who die before they are born will go to the greater credit of the City Beautiful committee. This will be really curing typhoid fever "at the source." Every orse corral probably taken care of, every automobile substituted for a otse, every garbage can covered where before it went uncovered-every possible residence for a fly abolished will mean that by just so much he will not preafter exist.

For the last generation the young people of Vermont in large numbers have been leaving the state. In forty years the state's population increased only twenty-five thousand.

A thorough survey of the state has usst been completed by the Carnegie Foundation, and President Pritchett summarizes the results in the Independent "There can be no question," he writes, "that the failure of the school system in the past generation to interest the youth of the state in the problems of their own environment has been one large factor in the continuation of enigration."

In a state in which the majority of the people are farmers, the schools have continued to clucate young people in academic subjects—that is, to be clerks and bookkeepers. They haven't had a word to say about the fascinating problems of the great laboratory of the out-of-doors, the farms from which the state is getting its living

The States and the National Government are beginning to learn that this is generally an agricultural country and that all prosperity begins with the soil. So that the farm is at least coming into its own.

Only last week was advertised a series of civil service examinations for the government agricultural departments. Positions of soil chemists, dairy inspector, plant investigators and several different jobs were seeking competents, and offering salaries from two to three thousand dollars per year for such men. As such places mean a lite job to the holder, a life in the open with comparatively little expense, and endless apportunity for original research the Jobs are certainly desirable

Ten years and there were no such opportunities for young men in these departments. Now the farming insustry offers opportunity in its scientific relations with the chemist, the loanist and the soil expert and the avorenment realizes that the main support of its existence is the prosperity of its forms.

The Quantity System Of Figuring On Contracts

Historical, Modern Competition and Definition, Advantages, Adaptability and Progress.

G. Mexander Wright.

The measurement and description of money values against such description is not new theoretically system one hear classing the quantity system one hears it spoken of as a "new idea". But it is not new by any means. The practice, however, of making a fixed "quantity" of material and labor the "essence" of the contract, it not new, is certainly "modern".

Historical Aspects of Quantity System.

Historically speaking there were measures of quantitis, ateas and distances, in very early times. Excluding the prophet, speaks of a man with a line and a measuring rod in his hand. Someone has said it was just a twelvenor rod, such for example as we might use today. Then in Zacoarish reference is made to the length and breadth heling taken of Jerusalem. That the Greek architects took

their measurements and made up their estimates of costs is generally admit-Vitruvius in his Handbook of Architecture, written about the time of Augustus, mentions as one of the essential qualifications of an architect, that he must be a good arithmefician 'to work out measurements and to estimate the cost of buildings" deed, in the case of public work in the city of Enhesus the architect was obliged to give a figure representing the cost of the work, which was retained by the chief magistrate, and honors were conferred upon the architect if, at the end of the job, this estimate of cost had not been exceeded. If however, the cost materially exceeded the estimate, the architect had to make up the deficiency, and it is said that it was a matter of regret to Vitruvius that there was no such provision in the Roman law. Then, again, among the Greeks, it was customary upon public work to publish itemized detailed accounts of the actual cost of such works, as well as the architect's estimate. Payment by measurement was very common, and we find references to a type of engineer-architects who measured buildings and whose reports finally settled matters-a sort of arbitrator. Here It will be seen therefore, that we have distinct references to the principle of "payment by measurement" the modern equivalent for which is the quantity system, whilst the Greek engineer-architect a cords very close quantity surveyor of today.

Enough has been said to show that the measuring tor we say "quantity" surveyor has existed certainly from the time of the tirrecks and Romans. The quantity system as we know it today had its origin some eighty verrage when competing bidders met and one of their number was selected to take off the quantities and furnish a copy to each of his competitors.

Better methods in time prevailed until the system was evolved such as I expect to see adopted in the United States, i.e., compensation to the contractor through definite measurement heing made the basis of the contract

Competition, so called, among contractors is comparatively a modern innovation. The words 'so called" are used intentionally, for under the prevailing conditions, competition intelligently and conservatively conducted is the exception, and not the rule. Our methods today are largely gambling methods when it comes to ascertaining the quantities of materials which go to make up a structure and which must of course, be accurately ascertained before an intelligent, satisfactory bid can be mide. So true is this that it is a matter of common knowledge, that fully 50 per cent of the contracts let are the result of error, and further, that the more capable and careful a bidder is to get in all his items, the less chance he has of securing a contract, profitable or even otherwise. The lowest bid, the one generally accepted, is usually anything but the most accurate

One of the greatest inconsistencies also in competitive estimating lies in the fact that no sooner are bibliers invited to give a price on a job than they seem to compete among themselves to see who can take off the least quantity of material, ele, and it is surprising how well some of them succeed.

The quantity system is not, as some persons have supposed, merely the laking off of a list of items by one person, for one other persons is use, nor does at consist solely of the listing of items by individual contractors with varying methods and uncertain accuracy, owing nethods and uncertain accuracy, owing in part to the fact that contractors are seldom, if ever, allowed proper time in which to mike my an accurate bid It must not be overlooked that some corate preparation and classification of quantities.

The Meaning of Quantity System.

What the quantity system does mean, however, is the careful measurement by an independent person specially trained in this special kind of work and the present age is undoubtedly the age of the specialist. This specialist or quantity surveyor proceeds with his work somewhat differently to the average contractor, for he follows certain recognized rules in taking off abstracting and billing, with a view to eliminating error. He uses also certain uniform standards of measurements and expression. Every written word or figure is preserved for future His checking and rechecking methods to ensure accuracy must be studied to be appreciated by those to whom the quantity system is unknown. A record is made of every item, however small, having a money value. These items are then all classified and arranged, each under its proper trade or department in methodical order. Guess-work methods are unknown to the quantity surveyor, whilst his accuracy and attention to details is well worthy of comment.

The surveyor who does this work is a professional man similar to the engineer and the architect. He should in fact, have, and usually has had come experience at least in the work of these professions, and in addition, a practical experience acquired in the field in actual superintendence of construction work.

Such a surveyor then upon commencing to take off the quantity from an architect's or engineer's drawings, readily detects any ambiguties, or discrepancies which exist, through hasty preparation or otherwise. Attention of the architect or engineer is at once called to such matters by the quantity surveyor as he goes along. Being so detected, such ambiguties and uncertainties can be, and are, corrected and adjusted, so that by the time the drawings and specifications reach the hidder for estimating purposes, all doubts have been cleared up, and every thing has been been made so plain and accurate, that the possibility of error in quantities can be practically disre-

This document, prepared exclusively in the surveyor's office, is then either numbed or similarly reproduced, and a far simile copy supplied free of cost to each bidder, who inserts his unit price opposite each item, and readily foots up the money cost in dollars and cents, and which really is all that he should be asked to do. The quantities of material and labor then set forth in this document, or bill of quantities, represents the limit of what the contractor will be called upon to perform or furaish in order to complete his contract, In short, the bid becomes a proposal to do a certain "fixed quantity" of work. indicated in the quantities, no more and no less. The contract to be drawn accordingly. This then very briefly is the main underlying principle of the quantity system of estimating, a dennite quantity of work for a definite price, and payment according to a well defined systematized method of measurement, and the entire elimination of those well-known conditions and elements which now compel bidders to take chances, and for which all parties usually suffer in the end, the owner included

The Wastes of American Practices.

Most of us are familiar with these wasteful, unsatisfactory methods, and sometimes, even pernicious practices, which are followed today in bidding upon and carrying out the work. These injure both parties to a contract, and they arise largely from bidders' mistakes in figuring because accuracy has to be so often sacrificed for an ill-advised speed. A large proportion of these mistakes occur in the burried figuring of the "quantity" by Some of us, when we have budders the opportunity of looking behind the scenes, so to speak, become appalled at the resultant effects of existing practices, such as the enormous waste in time and money in useless figuring. conditions, hard disputes, harassing terling lack of confidence, delays, suits at law and so forth, nearly all of which may be avoided by adopting more conservative methods in our premalatery work before contracts are let. Further, interpretation of plans and

specifications should, in common fairness to both parties to the contract, be made wherever possible before a contract is let, and not be left until afterwards, nor to be done 'as directed.' Under the quantity system, where the quantities are made the basis of the contract, this becomes practically imperative. Regarding interpretations one might be excused for saving that it would seem, as engineers or architects, to be a question of policy, as well as fairness whether we should continue to even assume the responsibility of deciding things already contracted for, according to our "judgment. If our judgment is to govern what a contractor must do, would it not be better to consider those throng which can be considered, and then determine them finally before a contract is let? Many an architect and engihas suffered professionally neer through assuming to exercise judiciary powers unnecessarily. But to return, not withstanding the fact that over 10 per cent of the entire population of our cities are dependent directly or indirectly upon the construction of buildings, yet the methods generally followed to determine the important question of contract cost, are those used generations ago; they come to us as a tradition from the period when tallow candles were used. Whilst we have made wonderful strides in constructive methods and materials and let us hope, in design, little or no attention has been given to standardizing estimating methods. We seem to have been too busy "speeding up" to regard seriously the advantages of accuracy when it comes to spending money or construction. In the end, of course, it is the owner, the financier, who suffers. There are, however, indications as a result of the movement initiated in San Francisco, that more conservatism and a closer adherence to business principles are going to be preferred by the moneyed interests in place of the guess work and gambling methods which they have overlooked in the nust

A contract, according to Blackstone, is "an agreement upon sufficient consideration to do, or not to do a purticular thing." The lowest bidder today will scarcely admit that the contract consideration is sufficient, or that his contract obligations are limited to do any one particular thing, at would also seem that architects or engineers who permit an unduly low bidder to sign up for a piece of work are courting trouble, and in such cases, where they have constituted themselves such arbitract of the contract, their judicial power, if exercised, is open to criticism.

The principle of measure and value, or payment by measurement, usually designated as the quantity system, is based upon equity and square dealing. On large work it is used in Germany, France, Ireland, England, Australia Scotland, and even South Africa, where some thousand of miles or more north of Cape Town we find not only an institute of Architects, but an Institute of Quantity Surveyors, and it is a sigulficant fact, that in no instance where the system has been once established has it ever been abandoned for their former haphazard methods, and which corresponds with those we have employed for generations past and still Among the advantages and improved methods of estimating afforded by the quantity system may be mentioned:

First, the enormous saving of time and money now wasted by numerous bidders all doing the same thing, going over the same ground,

Second: Safer bids will be made, as the volume of work to be performed is clearly indicated by the bill of quantities which is the essence of the contract.

Third: No expense to the bidder, the owner pays for his own quantities "knowingly," and they beneat him as well as the contractor. The owner pays now, but this fact is not emphasized or brought to his attention, and so he does not know it. The percentage added to a bidder's net cost is not all profit, a certain portion of such percentage is absorbed in running his business and similar overhead charges, which ultimately are, of course, paid by the owner.

Fourth: Saving of disputes arising from extra claims which often occur through vagueness of drawings and omissions, or other error in specifications.

Fifth: Better opportunity for the careful competent bidder. With the careful competent bidder. With the up from the same basks. The incompetents cannot omit or forget the painting, glass or other items, and so take work away from more careful or competent bidders.

Sixth: Better work and more harmony will result, for the reason that if no part of the work has been omitted there will be less temptation to riet up" on the work, and white usually results in dissatisfaction, if not friction or worse.

Seventh: Misunderstanding reduced to a minimum. The Bill of Quantities is the "interpreter" of what is intended, a sort of clearing house for the drawings and specifications.

Eighth: Neither party to the contract can obtain any advantage over the other on quantity or description of

Ninth: No disputes with sub-hidders it being clearly stated what each trade is to furnish.

Tenth: Contractors having much less figuring to do can then devote more time and give more attention to buildings in hand, and especially in supervising and directing their subcontractors.

Eleventh: Owners and architects would be less liable to have inferior contractors as the lowest hidders.

Twelfth: Fewer extras, These are usually a trouble to all concerned. Should any occur, they can be easier adjusted if the schedule prices govern in such case.

Thirteenth: The architect or engineer, if he so desires, can have the advantage of collaboration with the professional Quantity Surveyor, who also would be available when preliming figures are required, which information is now so often furnished by the contractors, thereby creating an undesirable obligation.

Fourteenth: No change or re-organizing of architects or engineers offices necessary, whilst much detail work, now involved when taking figures will be taken care of by the quantity Surveyor's office.

Fifteenth: When contracts are signed, the drawings and specifications

will previously have been made as countible as it would be possible to make them, thereby avoiding subsection quent monvemence to the contraction and his foreman on the job, and doing a ways largely with impuries at the activities of the progress of the work.

Adaptation to American Needs,

To particular system suggested for our use should be one best adapted to American needs and sentiment, a practical system which would meet our special requirements and endorsement. Such a system has been under consideration for some years past, one that is expected to meet with general approval and adoption, at least until experfence or wiser heads suggest something better. For many reasons, it would be undesirable to accept the English system in either of its forms. That is to say as a "system" for general use. The great principal it stands for, however, viz.; that of giving, as well as receiving a square deal, can be both accepted and used with much advantage to both owner and contractor, It suggests no haphazard or guesswork methods, which is true business and fore to all,

Now, very briefly: How can this system be adopted? It takes time of course to get rid of old enstomes or old habits, however had they may be, But considerable progress has already been made, and the outlook all over the country favoring better methods is now certainly encouraging. At the inception of this movement, however, in 1891, it was not easy to find anyone willing, even to admit, that betterment in estimating conditions were necessary or even possible, and there were fewer people still who new anything about the quantity system. Happily we are a progressive people, and things are not done today as they were twenty or thirty years ago. Indeed, it is now very generally recogmzed that estimating and certain contract conditions are about as had as they can be Quite recently it was stated by an experienced contractor whose opinions both deserve and command respect, that if a bidder figured to do everything just exactly as it was called for, he would not get one job in fifty, and the reasons why are well known to those in the business.

After once the principle and the safety of the quantity system is understood, (and the words "safety first" should become a national slogan), after its many advantages are recognized, its equity between owner and contractor becomes immediately manifest.

To adopt the system generally, the organization referred to hereafter, advocates that the United States Goveinment and every state and county in the Union, should furnish, free of cost, to every bidder detailed bills of quantitles, setting forth clearly and squarely exactly what quantity and nature of work it is that a blidder will, if succossful be required to perform in order to properly complete the contract. The next step, it is thought, will be that municipalities will follow the same practice. The advantages obtained will quickly become known in every locality among private owners and the hullding community, and the present practice, which is already tottering will be a thing of the past, and we shall be all wondering why such a labor saving, sensible method has hitherto been neglected to the present day and in our generation

The Quantity Surveyor,

Accuracy and sonesty are the quantity surveyors chief essentials apart from his professional ability. It seems, therefore that the practice of quantity surveying should be legalized in each state, somewhat similar to that of the public accountant, through examination and subsequent issue of licenses to persons thus qualified and wishing to practice. The furnishing of surety company's bonds by the quantity survevor has been suggested in some quarters to guarantee his accuracy and honesty, but it would seem that untia similar guarantee is demanded from other technical practitioners the exnedlency and efficiency of this course may fairly be questioned

It may be stated perhaps that to still further advocate the adoption of better estimating methods and more satisfactory contract conditions an organization was formed last year known as the American Institute of Quantity Surveyors, which is doing much good work along these lines. Its membership is open to all architects, engineers, contractors and others cincluding owners) who are in sympathy with the efforts being made to bring about better conditions. The dues are merely nominal including the otheral bulletin every mouth which gives the progress of this movement throughout the United States, whilst its columns are open to all for suggestions or inquiries regarding the work of the organization in general, or the quantity system in particular

Progress of System in America.

It may perhaps be only fair to add with due modest, however, let us hoper that to San Francisco belongs the credit of being the first city in the credit of being the first city in the Patient States in which a systematic effort was ever made to bring about better estimating conditions such as the quantity system affords. This most manifest that the properties of the state of the properties of the Bullders' Association of Pathforms (now the General Contractors' Association, dow the

Immediately following this came an address entitled "The Quantity System of Estimating" in the Academy of Sciences Building before the San Franeisco Chapter of the American Institute of Architects Much interest having been aroused, no opportunity was afterward lost of sustaining it. cles were contributed to architectural and building journals in the East and elsew ere "Better estimating methnds" was the slogan consistently urged for years. In 1905 a paper on this sub-ject was given and discussed before the Telluical Society of the Pacific Coast. The conflagration of 1906 somewhat disturbed the progress of the work temporarily, but it was soon resumed and brought once again to the front. It has since grown untill now the movement has spread from the Pacific to the Atlantic and fram Boston to New Orleans Everywhere today the subject is being received by engineers and contractors, as well as by architects with the greatest interest. I can testify to this, having but recently completed a tour of some 11,500 miles undertaken solely for the purpose of meeting the leading architects, contractors and engineers of our large

cities, and of personally still furthe advocating higher contract ideals and better methods, such as always follows the adoption of the quantity system of estimating.

*Consulting architect, San Francisco and president of the Technical Society of the Pacific Coast

HIGHEST BUILDING WEST OF MISSISSIPPE

The highest building west of the Mississippi has just been completed in Seattle, Wash. The tower rises 450 ft. above street level, and is so conspicuous that it is already being used as a beacon by mariners in making their way on Puget sound, and it is planned to have it illuminated at all hourse of the night to make it available for this use night and day. The building covers a lot that is 180 by 120 feet. The main structure is 21 stories high, and to thus a tower adds 12 stories. In addition to this there are two stories below street level. The height to the lantern at the top of the tower is equivalent to 42 stories. The foundation rests on 1,376 concrete piles driven to a depth of 50 feet below the surface. In building the foundation 4,000 barrels of cement and more than 1,000 tons of steel were used. On the foundation piles a total weight of 76,-560 gross tons will be carried, the steel for the superstructure alone weighing 4,732 gross tons .- Exchange

RUINS OF ANCIENT TIABLEANACE.

Indicating a Civilization in Bolivia Intedacing that of Ancient Egypt,

A city so old that even the legendary lore of the lineas, who traced an unbroken line of kings back to the eleventh century, is dumb concerning the people who built it, a city which a thousand years ago had been so fong dead that even song, story and tradition had forgothen every vesting of its history when Columbus discovered the "New World." Such is the ancient city of Trabuanaeu whose runs are crumbling surely, but very slowly into dust not far from the southern show of Leke Titucaca, in Robins

"The little present-day villace of Talciluamen is located on the rairroad which connects La Paz, the modern capital of Rollvia, with the part of Guaqui on Lake Titicaea, and may be reached in about two hours from the former place. The ruins of ancient Tilahuaneae, covering an area of about a square mile, are not over a half mile from the village"—write Edward Almeion (Tion, Washinston, D. C. American Urion, Washinston, D. C.

"A traveler stopping in the little town, and ignorant of the proximity of the ruins, would be astounded to observe the number of beautifully out stones built into parts of adube buts of the most primitive character, forming portions of squalid patio. A doorway to a dilangdated, thatch-roof but, may have a lintel or jamb formed by an artistically carved stone. In the walls of the little Catholic Church and in those inclosing its yard, and even in the paying may be seen these smooth stones The pedestal on which is mounted the stone cross in front of the church is

made up of them, while on either side of the gateway to the inclosure stands at carved stone idol whose lines, marred by the ravages of time, still show the artistic skill of the ancient sculptors who wrought them."

Thus the runs of the ancient city ave furnished much of the material to build the village of today, and while the strict utilitarian may find no fault the strict utilitarian may find no fault with this work of destroying the artistic monuments of a hoary antiquity to exter to present needs, to the student of archaeology it seems almost like of archaeology it seems almost like description. The Bolivian Government has recently enacted a law which for hids the carrying off or willful destruction of that portion of the rulns which vandal hands have left intact.

The ruins themselves include the remmants of temples, palaces, and great structures of what once must have been a large and densely populated city. Not a vestige remains of the dwellings and less pretentious houses in which this population must have lived. These were naturally of a more temporary character and the reientless agents of destruction, working through countless centuries, have obliterated all traces.

The question which confronts the archaeologist is-bow a population sufficiently numerous to accomplish The building of such a city have maintained itself in this region? The rulns are to rated 13,000 feet above the level of the sea on a vast plateau where the constant cold prevents the maturing of corn or other grain. At present potatues, coroa, and some other edible roots are grown, but the region sustains only a scanty mountain population. The city once covered a large area. the great structures were built by killed masons. One stone is 36 feet long by seven feet wide and weighs 170 tons, another is 26 feet by 16, and a feet thick. Only the monoliths of ancient Egypt equal those found in Trahuanacu. The movement and placmg of such monoliths point to a dense population, to an organized government, and consequently to a large agricultural area with means of transportation from various directions. The only tenenable explanation is that at the time when Tiahuanacu flourished the Andes were from 2,000 to 3,000 feet lower than at present. Geologists hold that in the Jurassic and even in the Cretaceous period there were no Andes and that through a gradual upheaval they have been formed in more recent geological times. The bones of a masat an altitude of 13,000 feet above the sea, and such an animal could not existed at such an elevation. Skeletons of gigantic anteaters have been found in the deserts of Tarapaca. and these could only have existed in regions of arboreal vegetation. These, and other geological facts, support the theory that the ancient city of Tialumnacu existed when the Andes were much lower than at present, perhaps when the cave man or Britain lighting for his life with cave bear, wild boar, and mastodon, and sketching their rude pictures on the walls of his orimitive, subterranean dwelling.

The business man who does not adertise because he tried it once, and failed, should throw away his cigar because the light went out. Firms destring news on special classes of buildings, such as Banks, Churches, Schools, Hatels, etc., will find such litems all classified and grouped under proper headings, commencing on this page. These same liems are again repeated under "LOCALITIES" in the last part of our news department.

APARTMENT HOUSES

SAN FRANCISCO-Apartment house, 2 story and base, frame, \$16,000. Ar-chitect, William H. Crim. Jr. 125 Kearny street, S. F. Owner, John Mc-Conaughy. GOVERNMENT WORK AND SUPPLIES.

Canal Circular 854.

The general purchasing officer of the Panama Canal will open bids June 11 1914, under circular No. 854 for furnishing oil handling plants, which include four steam-driven, horizontal duplex, noncondensing, double-acting pumps, two for the Atlantic plant and two for the Pacific plant, which will be used for handling fuel oil from oil ships to storage tanks, from storage tanks to steamers and from storage tanks to tanks which supply shops and power houses. The normal capacity of the pumps is 1,200 barrels per hour of crude oil against a total head of 150 pounds per square inch, and 400 barrels per hour against a total head of 250 pounds per square inch. Equipment also includes cast iron pipe and fittings, valves, gaskets, etc. Proposals will also be asked for a 225-gallon per minute centrifugal pump unit, complete, with motor, automatic starting apparatus, float, switch, foot valves and certain piping for insulation at the Darien wireless station, Radio, The pump shall be designed to lift 225 gallons of water per n against a total head of 190 feet. minute

The Canal Circular will also contain request for bids for furnishing 243. vio square feet of paving brick and 6,020 tineal feet special brick for use on pier No. 1, head wall and quay wall, Balbon terminals. Included in the circular will also be a request for furnishing three altitude gauges and one compound gauge to be installed in the Miraffores pumping station No. 2 and in the Mt. Hope Miraflores fifter building for the purpose of indicating the height of water in the wash water Bids will also be asked for furnishing 200 untreated piles 80 feet

Army Work Authorized,

The quartermaster general has directed the construction quartermaster of the Letterman General Hospital. San Francisco, Cal., to call for bids for installing a 5-ton ice machine in the power plant.

Puzet Sound, Fireproofing Buliding,

The bid of C. H. Schaar, 721 Twentyfirst avenue, Seattle, Wash, \$9,000 in amount, has been accepted for fireproofing pattern shop at the Puget Sound navy yard,

Balanced Valves.

Abstract of proposals for balanced valves for U. S. Reclamation Service, Baise project, Arrowrock dam, opened

at Los Angeles, Cal.: Item 1, 7 vales, lump price weight per valve: 2, 3 valves, price and weight per valve: 3, 7 vales. lump price and weight per valve; 4, 3 valves, lump price and weight per valve; 5, 2 valves, lump price and and weight per valve; 6, lump bid on items 1, 2, 3, and 4.

Joshua Handy Iron Works, San Francisco, Cal., delivery Sunnyvale, Cal., item 1, \$23,170, 42,974 lbs; 2, \$11,-44,089 lbs; 3, \$23,534, 46,682 lbs; 4, \$11,757, 47,797 lbs; 5, \$8,550, 42,725 lbs; 6, \$64,317; item 5, \$6,211 if included with items 1, 2, 3, and 4,

Power & Mining Machinery Co., New York City, delivery Cudahy, Wis., item 5, \$6,890, 41,635 lbs; 7, \$71,016; weight of items 1, 2, 3, and 4 \$81,000 lbs; item

5 only if other items are accepted, Steacy-Schmidt Mfg. Co., York, Pa., delivery York, Pa., item 1, \$26,381; 49,-000 lbs; 2, \$12,977, 50,000 lbs. 3, \$26,900. 50,600 lbs; 4, \$13,153, 51,600 lbs; 5, \$7,-500, 48,450 lbs; 6, \$76,825.

Coffin Valve Co., Neponset, Mass., delivery Neponset, Mass., item 1, \$29,100, 49.300 lbs; 2, \$17,700, 56,650 lbs; 3, \$28,-550, 48,950 lhs; 4, \$14,450, 45,200 lbs; 5, \$9,050, 48,950 lbs; 6, \$82,600; lump bid on items 1, 2, 3, 4, and 5, \$90,400,

'S contains the following:

A new hardening material for the surface of concrete floors contains to per cent of from dust or non-floor. It is added to the div centent in the proportion of 15 to 25 pounds to each 100 need with two parts of sund This pounds and one part of the mixture is originally an experience of the limits of the distribution of the d

FOREST FIRES HARM SOIL FERTILITY.

A definite relation between the amount of humans, or vegetable matter in the soil, and its erop-producing power as shown by yields of corn, is given in figures just Issued by the acpartment of agriculture. The department therefore advocates the use of various methods to introduce the required humans into the soil.

Experts of the forest service states that the soils of the whole country, and particularly of the south, have lost and are losing immense amounts of source of soil fertility through forest fires which apparently do little immediate damage but rob the soil of accumulations of lumus. In many parts of the southeast, land is being cleared for farming, and where such forest land has not been burned there is a large percentage of vegetable matter whiteh provides considerable fertility and a good texture. Moreover, this soll has a greater capacity to absorb and retain moisture, and thus is less likely to be washed and guillied under heavy rams. For these reasons, leaving out of account the damage to standing timber, the department's anthorities are agreed that hee should be rigidly kept out of woodlands

CHROMIC IRON ORE INDÚSTRY EXPANDING,

California Product Increased 27 Per Cent in 1913.

Many years ago the chromic from ore industry centered in the Atlantic coast States especially Maryland and Pennsvivania, where much of this ore was used in the manufacture of elemicals; but in later years the only chrome ore produced in the United States has come from the Pacific coast. According to J S Inlier, of the United States Geological Survey, in a report on the production of chromic iron ore in 1913, from "Mineral Resources," California has been the only producing State for rearly a decade. The marketed product in 1912 was 201 long tons, valued at \$2,753, a gain of nearly 70 per cent over the production of 1911, but in 1913 (Le sales amounted to 255 long tions, valued at \$2.854, a gain of nearly T per cent in quantity compared with the output of 1912. Practically the whole output in 1913 came from one mina near Important in Shista County Canomite is one of the most difficult numerals to fuse. It will stand a tempersture of about 2,180 degrees C., and

this neithed resistance to heat makes it

valuable for refractory purposes, furnace learths, chrome bricks for lining furnaces, etc. A large amount is consimed in the manufacture of pigments dyes, and various chemical compounds as well as for tanning, in which it imparts to the leather softness and durability under exposure to dampness.

The most rapidly growing use of chromite is metallurgical, in the manufacture of steel alloys. Chromium gives to steel a marked degree of hardness and if added in the proper proportion does not produce britishness. Chromium steel alone or alloyed with tungsten or molybdenum is used for making high-speed tods. It is also used for armor plates and armorphering projectiles and for these proposes it is generally alloyed with inckel, vanadium, or managanese.

LANDS IN LASSEN FOREST OPENED TO HOMESTEAD ENTRY.

The Secretary of Agriculture has approved the reports of experts of the Forest Service and of the Bureau of Solls on the Hat Creek land classification project within the Lassen National The project embraces an area Forest. of 91,675 acres, of which 25,246 acres are in private ownership. An area of 58.274 acres was classified as non-agricultural, and the final classification as to 6,745 acres was suspended This area will be re-classified after the same and removal of the timber in order to determine what part of it is agricultural.

An area of 1,410 acres was found to be chiefly valuable for agriculture under present conditions and will be listed with the Department of the Interior for restoration to entry under the Forest Homestead Law at once. These lands are in Township 32 once. 14 and 5 cast: 33 north, 5 cast: 34 north, 4 and 5 cast: 38 north 3 cast.

No information can be given at the present time as to when the lands will be restored to entry. When they are restored to entry notice to that effect will be posted in the Sacramento II. Land Office and advertised in the local newspapers.

FOREST FIRE SEASON GETS EARLA START.

The first reports of forest fires have tegun to come in to Washington from the national forests, and they indicate to the federal officers an early start of the fire season with unfavorable weather conditions from the very beginning. In the northwest there was less snow on the mountains at the end of the winter than for many years past Railroad rights of way which were last year deep in snow are reported clear now and dry enough to burn readily .From the Canadian border to Mexico the reports are similar, and there have already been extensive fires in California and Arizona.

The chief forester reports, however that the fire-flighting forces of the Service are organized better than ever before, particularly in respect to the fire detection system of lookout station. By means of these stations are are reported quickly and accurately so that the control may be on the ground at the earliest possible moment.

In those states where the gravest danger threatens, especial efforts are being made by the government forcsters and by cooperative fire protection associations organized among timberland owners to secure care with fire on the part of campers, prospectors, loggers, and by railroads. The northwestern forestery and conservation association with headbarters at Portland, Oregon, is one of the leaders in this campaign.

LARGE CHROMIC IRON ORE DE-POSITS IN CALIFORNIA.

Deposits of chromic iron ore occur in Maryland and the adjacent portion of Pennsylvania, in North Carolina, and in Wyoming, but the only deposits operated in the United States within recent years are in California. Numerous deposits lave been reported in 32 counties of that State according to the United States Geological Survey, and many of them could be worked if the demand for the ore and its value warranted exploitation. The available denosits, with much in reserve, largely, exceed the local demand for refractory material in a field extending as far east as the Rocky Mountains.

The production of chromic iron one in the eastern portion of the United States, where the demand is greatest, ceased years ago. The supply is now obtained wholly by importation, mainly from South Africa. On the other hand, the Pacillic coast supplies all its own demands by home production. Possibly with the completion of the Panama Canal the California product will also invade castern markets.

Copies of the report on chromic iron ore may be obtained free on application to the Director of the Geological Survey, Washington, D. C.

NEW USES FOR ASBESTOS-CEMENT SHEETS.

Consul W Henry Robertson, of Manreports that the daily press of that English city recently contained an article relating to the growing demand for ashestos-cement sheets. The journal referred to mentioned, among the purposes for which this new fireproof and moisture-proof material has already been employed, its use thoth inside and outsider in erecting bungalows, tuberculosis sanatoria, army service depots, barracks, hangars schools, shooting boxes and motionpicture houses, while several vessels now in service have the berths and saloon walls and ceilings lined with these sheets.

CIRCULAR GIVES FOREST FACTS.

An average of 70 human lives are surfitted annually in forest fites, says the circular, and a loss occurs of \$25-100,000. Damage from insects and tree diseases, which follow fire costs each year \$50,000,000. The cost of destruction resulting from floods is not estimated, but is given as "countless millions."

But the circular expresses hope more than pessimism. As well as the colored pictures showing the forest fire the effects of the fire, and the damage catised by floods, it shows also forests planted and grown under intensive management, and the national forest ranger scouting for fires on the mounlookout station. The effective patrol here referred to has reduced "forest fire losses to as low as onetenth of one cent an acre." It is nointed out that by planting forests an annual income could be derived in the country of \$65,000,000; and by preservation treatment upon timber each year \$100 000,000 could be saved.

PLEA FOR THE GOTHIC IN CHI RCH ARCHITECTURE.

Secular Influences, Former Church Control and Beauty of the Gothic Style.

H. C. Whitchouse, Architect, Hatton Building, Spokane, Wash.

This is a day and age of restlessness, hoste and, incldentally, of new styles and fads. In secular affairs one architectural style follows another and chaos seems the result. Where does the church stand and this confusion of styles? Is she uninfluenced by these fads and fancies? No, she has wandeted from one to the other and at times seems to be but the echo of scular life. Shall we, in these our most important structures, build for the moment to satisfy a fad that will last probably half a dozen years?

Let us consider the architecture of our churches today: The ecclesiastical art we possess today in architecture. painting and sculpture we owe directly to the church. In the Middle Ages Christianity was the dominant power and the church the dictator-without for art could not have existed. The church reached the high water mark of its supremacy and domination in art in the sixteenth century. Following the decline of power of the church in art came the confusion of many styles, none clearly defined. This has been going on to a greater or less degive ever since. However, there is a wonderful and encouraging improvement in style lately and in some parts of the country we can frankly say that examples of our most recent works in ecclesiastical architecture rival those of the mediaeval builders. This is by no means true of every work-only a small percentage. The faulty work today seems but a study of the profiles of monthlines outlines of arches and details of decorations of the mediaeval churches instead of the basic principles underlying the Gothic art.

The restoration of the Gothic in England, after taking root, was weak and liteless. Forms were copied but principles ignored. Today the churches are consistent; they are based on the true conception of the church and Gothic principles. To be sure, they cannot compare in richness with the older works, but the true spirit there. We can do no better than this. As stated before, the church reached the height of its supremacy in the sixternil century. Up to this time the counch had been developing from one Cathic period to another and reached its height in the Penpendicular period, Strange as it may seem, the world today does not possess a simple example of ecclessation are interested in the cure built entirely in this period. The Canterbury rate dead is typical of the English can the day of the style that most of these structures possess. The east end of Canterbury was completed in the early of Lancet period, the nave and tower were completed in the Perpendicular meriod.

This period of the styles was the result of years of study and development and when it became ripe for use as a typical church style, it was crushed and utterly swept away. However, the period of the style was perfected and came into unusual use, and its beauty fell like a garment over the cruder Norman and early English cathedrals. It was logical in construction, thoroughly ecclesiastical in feeling and purely rational. There seems no limit to the possibilities of its growth. Here is one reason for perpetuation of this beautiful style.

But let us consider another point: We must know one thing, and that is that an architectural style cannot be developed from nothing. It must be the result of years of development. Take, for instance, the Greeks: The inspiration for their early works was a motif of simple rounded stone columns and lintels. From this fundamental principle of all building construction they developed a style, adapting it to their needs and uses and in its climax producing the beautiful architecture which the world has perpetuated and adapted through the We cannot, in our architecture, start from the point the Greeks did as we are in advance of this. We are living in an age of far more advanced constructive knowledge. We must pick up the architecture of the Greeks where they left it and apply it to our modern needs and requirements,

Let us consider the last point; the brauty of the Gothic. The Greeks built their temples to house their gods and goddesses. The mediaeval build-ers built their churches in which to worship one Deity and to hold communion. Compare the long horizontal lines of the Greek temple with the tall perpendicular lines of the Gothic. The Greek temple was a perfect type, and why? They are built beautifully, perminently and wholly for the protection of their idols. The mediaeval builders built their churches in which to worship God. Nearly every line pointed heavenward, towers, pinna-des, arches and all Lastly, it was the architecture of a Christian church, last us take up this great and unfinis led style, vary it and add what is necessary to perfect it to nicel our modern requirements, and complete something which shall be an honest means whereby we glorify God.

NEW TYPES OF BUILDINGS FOR OLD SCHOOLS.

School Architecture in California is a new and handsome hooklet just issued. It is intended to help the school trustees of the State in huilding and improving their school houses.

It was compiled under the direction of State Superintendent Hyatt, by a committee of architects, viz: Lewis P. Hobert Charles S. Kaiser, J. W. Woollett, J. J. Immovan and C. H. Cheney. It contains 64 pages, includes 77 cmts, and has a cover designed by the State Architet's office, showing a typical onestory California school house, with red roof and wide sheltering paralles, against a brilllant sunset sky.

The object of the bulletin is to sow in graphic form some excellent is an amples of the different types of school abuildings that are being constructed buildings that are being constructed today in California, so as to build up in the minals of the people a distinct bideal of what modern school houses along the cought to be. Its tendency is toward ought to be its tendency is toward or the better conditions for the hows and of girls and finer landscapes for the Colden State. — Richmond Record-Herald.

TOWN OF CONCRETE.

Houses Poured in Sections of One Story at a Time.

A small city of concrete houses is being poured at Midland, Pa. by the Pittshurgh Crucible Steel company for its employees. The houses, two stories in height, are of four rooms eich and cost complete about \$1,100 each. This includes a charge of \$25 to cover the expense of the forms, which represent and expenditure of about \$3,000

Clean looking, with white exterior, the houses are plain, but far from unstractive in appearance. Across the front of each home extends a railed concrete porch, from which three steps lead to the lawn. The front door opens directly into the living room 15 by 1832 feet, from which is taken the space which is required for a three foot star-way leading to the upper fluor. Back of the living room is a kitchen 15 by 1334 feet. The dividing partition is of solid concrete and contains the chimney, which extends through the roof

In pouring the house the steel forms for the first floor are set, and that part of the structure is east as a monolith when the mixture has set to sufficient strength the molds are removed and used in pouring the second story, when contains two rooms, corresponding in size to those on the lower floor.

The great sanitary advantage of the bouse lies in the fact that it may be washed like a paved street from roof to floors with a hose.—Exchange

THE BROOKLYN BRIDGE.

NEW YORK, May 22,-Thirty-one years ago today Brooklyn Bridge, for a long time the greatest structure that spanned any river, was opened for traffic. The only celebration was the thying of fligs from the Manhattan and Brooklyn ends. In its thirty-one years the great suspension bridge had carned close to \$24,000,000 in tolls for the city. according to estimates based on the earnings of \$23,224 572.31 up to one vear ago. The greatest source of revenue is from street cars. An average of about 4,000, at revenue of ten cents a car, pass over the bridge every day.-Exchange.

STATE PIPING INSPECTORS EARN GOOD SALARIES.

The Californ annual State Chil Sevree Commission annual commission annual commission of the Phing Inspector, to be held in Secrement, San Francisco and Loss Angeles on Jane 27, 1914, to provide register of clightles from which to make certification to 60 towards as a commission of the provided programments of the property of the provided provi

Inspector in the service of the State These positions pay from \$150 to \$200 per mouth, and call for inspection of contract work or supervision of day labor work in the various State institutions under the direction of the

State Department of Engineering.
Applicants must have a thorough knowledge of all kinds of piping and te able to supervise the installation of piping Layouts from working draw-

The examination will include the following subjects. Arithmetic, Readin of Plans, Knowledge of Piping, Report Writing, Training and Experience, and Personality and Fitness.

Application blanks and further information may be secured from the State Civil Service Commission, State Capitol, Sacramento.

Applications must be properly executed and filed with the Commission on or before June 22, 1914

I'MTED STATES CIVIL SERVICE EXAMINATION,

SEMOR HIGHWAY ENGINEER, MALE (\$2,220 to \$3,000). HIGHWAY ENGINEER, MALE (\$1,500 to \$2,100), June 20, 1014.

The United States Civil Service Commission announces an open competitive examination for swilor highway endered and highway engineer, for men only. From the register of eligibles resulting from this examination certification will be made to fill a large number of vacancies in theorem positions in the Office of Public Roads. Department of Agriculture, and vacancies as they may occur in positions requiring similar qualifications, unless it is found to be in the interest of the service to fill any vacancy by reinstatement, transfer, or promotion.

The duties of these positions will involve superintending the construction of roads of various types throughout the United States. In addition the employees will be called upon to inspect roads and investigate road building materials, as well as administrative orginization methods of management etc., in count es for the purpose of reporting upon systems by which the hest administration, constituction, and maintenance of the country system may be secured. The inspecting of roads locally and giving advice in regard to their improvement, and the giving of addresses at road meetings will also be included as part of the duties of these positions

Elleblos resulting from this examination will be divided into two grades. The first grade will be designated senior highway engineer, with salaries tanging from \$2,220 to \$3,006 a year. The second grade will be designated highway engineer, with salaries ranging from \$1,800 to \$2,100 a year.

Competitors will not be assembled for examination, but will be rated on the following subjects, which will have the relative weights indicated: Subjects.

OTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accesssory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. Prompt Shipments

Crushed Screened Sand **Blue Trap Gravel Crushed Rock** Vashed

Segregated Sizes

Our products being carefully washed, screened and of uniform sizes insure sound and economical concrete construction.

OUR SIZES:

Clean River Sand to 35 inch Gravel and Crushed Boulders 1/2 inch to 1 inch " 1 inch to 1½ inch 11/2 inch to 21/4 inch

Roofing Gravel to 1-2 inch Cobble Stones for Bungalows.

With a Modern Equipped Plant at Niles We Are Able To Give All Order's PROMPT ATTENTION

CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philadelphia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---The Ritz-Carlton,

New York

The Ritz-Carlton,

Montreal

The Plaza, Buenos Aires Grand Hotel et de la Plage Guaruja, near Santos, Brazil

The Carlton, London The Ritz, London The Hyde Park, London The Ritz, Paris And its service can be only as good as its elevators—which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninety-one cities in the United States are always at the Architect's call and can assist you in making your elevator—specifications—100 per cent correct.

OTIS ELEVATOR COMPANY

Stockton, North Point and Beach Sts.

Editorial Comment.

Building construction in San Francisco for the month of May went along with about an equal pace with the preceeding three months, the total of permits granted and contracts filed being \$2,564,959. Of this \$430,992 was for brick and concrete; \$661,263 for frame construction, and \$114,700 for alterations and additions Also during the month the Panama-Pacific Exposition Company let \$428,314 worth of contracts: \$440,797 for City construction, \$120,760 for streets and sewers. \$139.623 for State construction and \$81 -74° for federal buildings within the city limits. This total averages with the preceeding months of the year, the total for the past five months being as follows: January 1914 \$1 928 563

It will thus he seen that the record is about the same as hist year. For the years succeeding the fire the month of May fonted up pretty good tetals. Until 1912 only a record of private construction was kept. Compared to other cities of the country is at least holding its own, as while business is quite with us it so every where and we have no cause to complain.

May, 1914 2,564,959

Mt. Lassen is repurted to be in eruption. Considering facts of seismibistory the past ten or fifteen years a have been the most remarkable subbistory began. More violent earthquarkes and eruptions have been chronicled than has ever occurred within an equal time before, but they may be because the means of reporting them are so much more effective.

The geological history of the high Sterra recount many lava flows and eruptions. The present canyon of the mountain streams have been cut through volcanic rock that many times filled their former courses. The mountains from the Tehachapi to Mt. Shashi are dotted with old craters and the mountain lakes are often craters or fissures from which issued the great lava streams that covered the country for thousands of square miles. The basalt cliffs north of Oroville are the lower

terminus of some of the old flows. The drift mines of the mountain counties are the old channels of the rivers before the lava flow obliterated the streams. And it is only natural that in this day we should have some echo of the old and dying activity that in former ages reared the mountain walls and left the snowy peaks that mark the highest points of the Sierra.

The Panama canal is shortly to be opened to the world's commerce. The opening has been hastened by the congestion of freight due to the closing of the Tehuantepec railway on account of the Mexican revolution. Ships of 5000 tons burden can now pass and in all probability the canal will soon be accommodating the necessities of commerce and relieve the congestion of freight at the istimus.

Teak Forests in Java cover 1,480,000 acres, and, as the area reafforested is two and a half times as large as the felled in a given time, magnificent stock of timber is continually increasing. A pest of the Java teak plantations is alang grass (Imperata arundinacea). In order to prevent the incursions of this plant, as hoeing is too expensive, the foresters sow a leguminous plant, Lencena glauca, between the rows of teak seed-This chokes the alang, keeps the soil clean, and enriches the soil in humus and nitrogen, and ultimately disappears with the increase of the forest cover.

This is the month of wedding bells and the newspapers are filled with pletures of brides to be. Apropos of this time the following account of the plight of a native of Georgia may be of interest:

Atlanta, Ga., March 11.—State Game Warden Davis was rather startled a day or so ago when he received a hunting license from a north Georgia county, on the back of which the following was written: "My dere ser:

"I don't want this sorter licents. I thot I was a gettin' a Marridge licents, sumbody sent me to mr..... and sed be wood gimme a licents, mandy was so mad when I got back with this here lunten licents she wouldent have Me, les soi I didn't hav sent sanuff to git a marridge licents, so she ups and runs of with bill jonson and I Am in a hel of a fixt. I wants my numey back, unless this hear licents will let me shoote bill johnson.

"yours most truely. sam Jackson."

THERE'S NOTHING TO HOLD HIM BACK.

I hear the Jingo loudly shout: "Now, on to Mexico!"

"There are no strings on you," says I.
"So just shut up and go!"

-Tennyson J. Daft.

New Ideas For Municipal Charters---The Recall.

Hy Wm. J. Locke.

It is now universally conceded that every modern municipal charter based on either the Commission of Business Manager Plan of Government should contain provisions for exercising the initiative, referendum and recall so as to provide logical and necessary safeguards against possible abuse of the concentrated power which these sys-Direct legislation and tems involve the recall have undoubtedly come to When the machinery for their operation has been repaired and propcily regulated they will undoubtedly be recognized as most desirable auxilisties to our system of nobular gov-How can we ernment. consistently brate of government by the mounts if We deny the right of direct legislation? It would annear most illustral to deny the people's right to do directly those things which they may authorize their representatives to do for them Would it not be most unreasonable to endors the creature with power which we deny to its creator, or, in other words to concede the servant more anthority than possessed by the master? However, it has been difficult for us to harmonize, our ancient ideas of municipal government in a democracy with sestems which thus involve the concentration of great power in few bands; in fact, they would have found but little favor in the United States were it not for these provisional safeguards whereby the people reserve to themselves the right to legislate directly whenever they may deem it necessary and also to dismiss an elected official when for any reason he becomes unsatisfactory. By providing such governmental machinery the danger from the abuse of power is almost elim-

Probably the one feature of this new olea in government which has been subjected to the most use and also to the most abuse is the "precall," and as a result it has come in for much criticism. A little investigation of some of the numerous cases in which the recall has been invoked shows that the criticism is justified, and that the metiod of procedure which has been universally adopted for its exercise is saily in need of improvement.

in the first place the busis upon which a recall election is founded is unquestionably weak. It rests on a very poor foundation, to-wit; a peti-Those who know anything of the 15on various methods resorted to for obtaining signatures to petitions will undoubtedly admit the truth of this statement. As a result, the average petition is not regarded as a very sigpitienns document. The fact that a name appears on a petition is not at all indicative of the real sentiments of the signer, for it is common knowledge that many signatures are obtained under misrepresentation, and others through coercion. Many persons will sign a petition merely to enable the solution to earn the few cents which is often paid for each name secured, others will do it to oblige a friend or accommodate a customer, while others again will sign merely to

get rid of a bore. In other words, it has developed that there are many people who may be induced to attach their signature to any kind of a petition, metely because they lack moral courage to refuse. It is the natural disposition to be accommodating, besides it is the "easiest way," as it avoids explanation or argument Therefore, I would repeat the statement that a netition is not a very significant ducument. As a matter of fact it merely represents so much work on the part of the person or persons who solicited the signatures, nothing

Another defect in the present method of exercising the recall lies in the fact that it gives power to the minority which it deales the majority. For instance, a petition containing the signatures of from 15 to 25 per cent of the voters compels the council to call a special election, notwithstanding the fact that perhaps 58 per cent or sourof the voters are absolutely opposed to it. This is not right. Those who want an official retained in office should have the same right of petition as those who desire his recall, and if an conal or greater number of voters wish to keep him in office and are opposed to submitting the question to a special election, their wishes should be given as much consideration as those of the others. In the United States, the business of government is conducted on the theory that the majority should rule therefore, how can we consistently uphold a law that allows the minority to do something which the majority onposes? The signature of a citizen, like his vote, should have no more weight than that of another citizen.

Another serious defect lies in the fact that the present recall laws in California, except those of a few charter cities, impose a great and manifest injustice on the official sought to be recalled, for the reason that It is necessary for him to get a positive majority of all votes cast in order to retain his office, whereas a more plurality will suffice to elect any of his opponents. The new charter of Los Angeles County contains this defect, and of Supervisor Norton, the Los Angeles Express says:

It is one of the anomalies of the recall that the official against whom it is directed alone must receive a majority of the votes east. In the present case, it is easily conceivable that Norton might receive twice the vote east for any one of his opponents and yet be recalled and one of those opponents chosen in his stead.

Assume, for example, that 10,000 votes are east in the approaching election. The issue to be decided is reality divided into two parts: First, series of the recalled? Second, if he shall be recalled, who of his five opponents shall be elected to his office? There might be east 19,500 votes against or recall of Norton and 20,500 in favor of his pecal with the result that be worth the recall with the result that be worted automatically he ousted from his place. Those voting for his recall might

divide their votes that the leader among the five candidates would receive but 5.500 votes, and yet he elected to his office in face of the fact that 19.500 votes were cast for Norton's retention.

It is essential that a positive majority of all the votes shall be east for Norton. He alone must receive such a majority. A plurality will suffice to elect any of his opponents in the event that the recall should be sustained.

The Los Angeles Tribune, in referring to the matter has this to say:

"In this campaign he fights under a disadvantage, since on the question whether or not he shall be recalled, he must, he order to retain his office, poll a vote larger than that of all his opponents combined, for they naturally stand as a unit in favor of the recall."

The California Outlook for April 11, 1914, also contains an article showing this injustice which exists in the present laws relating to the recall.

These defects in the present method of exercising the recall may be easily remedied. The objections to the present method of petition may be overcome by using a different method for securing signatures. For example, 1ustead of taking the petition around to the voters to get signatures, why not require the voters to go to the petition? Copies of the petition could be left in a number of public places throughout the city and the voters notified through the press or otherwise that they may go to any of the places designated, within a specified time, and attach their signature. No valid objections could be raised to such a plan. It certainly is not any more unreasonable than the present renirement in regard to elections, in which case the voter is obliged to go to the polis on election day instead of having the ballot box brought to him. doubtedly it would be a more difficult matter to secure signatures under such a plan, but surely that should not be a yalld objection necessarily. Signatures obtained by such a method would certainly be more significant and more truly indicative of the real sentiments of the slener. For these reasons it would undoubtedly be much better to adopt such a method, even if it would he necessary to make a considerable reduction in the number of signatures required. Ten signatures obtained undec such a plan would be worth fifty secured by the present method. To be sure the names of those who now sign under misrepresentation or coercion. or just to be obliging, would not be found on a petition under those conditions but that would hardly be a calamity. There is an old saving that 'quality is better than quantity." tuless the voters would be willing to go to a little trouble such as this would involve, it would be quite evident that they were not very anxious to have the official recalled. There is nothing involved in the method proposed that would make the recall prohibitive or ven more difficult If public sentiment was sufficiently strong to demand

the recall of a certain officer, the re-

quired number of signatures would undoubtedly be secured.

It will interest our readers to know that this suggestion has been adopted into the charters of Long Beach and Vallejo in this State. It has also been adopted in the new charter of the City of Springfield, Ohlo, which charter, by the way, is said by the committee of the National Municipal League to be the level nucleipfi charter, set framed.

The second detect referred to in the method used at present for exercising the recall may be cured by permitting counter petitions, and requiring that the proponents of the recall shall not only secure the specified percentage of signatures to their petition, but that they shall also seeure a greater number of signatures than those signing against the recall. In other words, the submission of counter petitions should he provided and as much weight and consideration should be given to one petition as another. It a majority of the voters petition for retalolog the officer, that should end the matter without the necessity of resorting to a special election.

That a small minority of should be empowered to compel a city to undergo the turmoil and expense of special election when the majority do not want it, is unwise, unjust and un-American. The signature of one citizen, as well as his vote, should have ao more power than the signature of onothee eltizen. When it comes 1.0 voting the majority rule, but in the case of a recall petition the minority rule; and not only do they rule, but the majority are not even considered, have nothing whatever to say about it. No matter what the circumstances may be, a special election must be called if the minority insist upon it.

Not long ago a recall petition was filed against an official of the City of Dallas. A number of leading citizens who were confident that the recall would fail, attempted to dissuade the proponents from insisting upon a special election, but without avail. As a last resort they got out a counter petition to which they secured the signatures of over one-half the voters of the city pledging themselves to vote against the recall. This was extralegal, there being no provision of law for it It was done simply to convince those proposing the recall that a special election would be futile. Fortunately they were successful in persuading the withdrawal of the petition. Now, then, here is an illustration of the effect of a counter petition. In It not striking proof of the aced of such a provision of law! I will add, in passing, that such a provision has been incorporated into the charter of Long Beach; also into the charter of Vallejo in regard to the initiative.

Another thing that should be borne in mind is the fact that a recall electtion makes it necessary for the officer attacked to devote several months of bis time to a political campaign instead of giving attention to the public duties for which he was elected. The work of his department invariably comes to a standstill and the whole clty gets embroiled in a bitter contro-This fact alone should be sufversy. ficient evidence of the folly of permitting a small minority to call a special election in spite of the wishes of the majority.

Another advantage of the plan here suggested is this: It would remove to a large extent one of the greatest objections to the metion of exercising the recall, to-wit; the warring between candidates before the recall itself has bego decided. It is the general concensus of opinion that the question of census of opinion that the question of census of opinion that the question of census of the considering other candidates for the office. It has been found that unless this is done other issues will be introduced and the merits of the recall proposition lost sight of; in fact, the issue develops into an ordinary political campaign.

There is no question but that the initiative, referending and recall may initiative, referending and recall may be considered as permanent fixtures of our system of government. They should not be regarded, however, as a slightest provocation, but rather as protective measures to be resorted to only when all other means have falled. From Partie Municipalities.

reon racine Municipalities,

REQUIREMENTS FOR GOOD ILLIM-INSTION IN AN INDUSTRIAL PLANT.

From The Isolated Plant

The requirements which must be met in the design of a satisfactory lighting installation for an industrial plant are four:

First-Sufficient light of proper quality on the work;

Second—A moderate intensity of light over adjacent area and on the walls;

Third-Absence of glare.

Fourth—A system which is simple, reliable, easy of maintenance and low in operating cost.

Light on the Work.

An obvious requirement for satisfactory illumination is that the quantity of light on the work he sufficient. Better lighting facilities, along with practically all other improvements in Industrial plants are installed for the purpose of ultimately decreasing the unit cost of production to a minimum. From an economic standpoint, however, it is very difficult, if not impossible, to determine the proper intensity of light for a given class of work. This intensity depends upon the cost of producing light, the number and wages of the employees and the value of their output, as well as upon the nature and bneness of the work and the possible reduction in spoilage. Owing to the difficulties encountered in evaluating these quantitles, estimates of the intensity of illumination required for any class of work have usually been based on other than purely economic considerations

Unquestionably, the intensity of light in any part of a factory should never fall so low that accidents may be justly attributed to this cause. Considered only from the standpoint of safety to employees, 9.25 foot-candles may, in most instances, be taken as the lower limit of permissible intensity in an Industrial plant.

Required Intensity.

The upper limit of needful intensity of artificial light may be conservatively estimated at from 5a to 100 foot-candles. Illumination of this order is sometimes required for operations involving fine detail, rapidly moving machinery and black surfaces, such, for example, as are common in the shoe industry. After the apparent bright-

ness of an object has reached a certain magnitude, a further increase of intencity does not appreciably aid vision. The necessary volume of incident light will of course, depend upon the coefficient of reflection of the object illuminated, but even for fine work on very dark goods, intensities of toe out the c of those stated above are considered satisfactory. Such intense illumination is usually required over but a limited area and, therefore, can hest be supplied by the use of small lamps and reflectors placed close to the work. While from 0.25 to 100 foot-candles

may be considered as the extreme range of intensity for artificial lighting in factories, the great majority of installations will fall within much parrower limits, between approximately 1 and 6 foot-candle Many tables have been published designating the proper intensity of illumination various classes of work, but this necessary intensity depends so largely upon the nature and distribution of the lighting units and upon local conditions as well as on the work to be performed that such tables should be used only with the greatest caution. Furthermore, as stated above, such estimates are at hest based merely on what is now considered good practice in plants where illumination tests have been conducted, there is no definite assurance that either a higher or lover intensity of light would not tend toward a more economical operation of the plant. As a matter of fact, the cost of adequate illumination for an industrial plant is so low in comparison with the value of the output dependent upon it that in many cases intensities considerably higher than those now supplied will be found profitable. Tables which give values of illumination recommended for various locations should be understood as merely an approximate guide; one of the most useful of these is given in the 1912 report of the Industrial Light. ing Committee of the National Electric Light Association. No table of intensities is included in this bulletin but the illustrations discussed on succeeding pages will indicate the order of intensity now considered satisfactory in the virious industries considered.

A new vacuum cicaner, designed to be operated by water power in a sink or bath tub, consists of two suction pumps driven by a water wheel, and a chamber in which the dust is rollected to be washed away by the waste water.

China imports wood pulp from Great Britain, Sweden, Norway, and Germany, many

Fully one-third of the roal consumed in Berlin is in briquet form.

An English scientists has produced minute diamonds by exploding a powder made of condite and carbon.

Several railroads are replacing brass passenger car fittings with branze, as the latter metal is less affected by weather and coal gas and more easily kept clean.

A vast area of New Zealand which a valuance devastated a quarter of a century ago, is being re-forested with larch trees, convict labor doing the work Firms desiring news on special classes of buildings, such as Banks, thurches, Schnols, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are oxolo rejected under "LOCALITIES" in the last part of our news department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house, 3 story and base, frame, \$30,000. Architect C. E. Gottschalk, Phelan Bldg., Owner's name withheld S. F. building will be erected on Lombard street near the Exposition Grounds. and has been designed to contain a number of two and three room suites with baths. Interiors will be finished in pine and redwood. There will be steam heat and a hot water supply. All suites will have wall beds. rooms will be finished in tile and will have composition floors. Entrance will he finished in maride. Exterior of the building will be covered with cement plaster on metal lath. Plans are nearly complete and figures will be called for shortly.

SAN FRANCISCO-Apartment house, 1 story and base, brick and steel, \$25 .-000, Architect, C. O. Clausen, Hearst Bldg , S. F. Owner, M. S. Show. The building will be erected on the north side of Bush street west of Hyde, on a lot with a frontage of 34 feet 4 inches and a depth of 1371/2 feet. There will be twenty-five apartments of two and three rooms Interiors will be finished in pine with some elm panels and oak floors. Plans provide for steam heat, an automatic elevator, and hot water supply. All apartments will have private baths and wall beds. Bath rooms will have tile wainscot and comosition floors. Entrance will be finished in marble and tile. Exterior of the building will be faced with red pressed brick. Plans are complete and in the hands of the owner who is now taking figures for the work.

SAN FRANCISCO-Apartment how 3 story and base, frame, \$16,000. Architect, C. O. Clausen, Hearst Bldg. S. Owner, Mr. Revelli, The building will be erected at the corner of 26th and Capp streets, covering an area of 10 by 120 feet. Exterior of the building will be covered with rustic and cement plaster on metal lath, Plans are complete and in the hands of the owner who will do the work by Day tahor Materials are now being purchased.

GOVERNMENT WORK AND SUPPLIES.

Blighting American Business [From Army and Navy Register, May 23.1

It has been surmised in comment on these pages that it would not be long before the administration would come to a realization that there is nothing to be gained, in a political way, and still less in an industrial way, hv awarding contracts for military-naval material to foreign manufacturers. The Secretary of the Navy has sought to impress Congress and the neonle by means of statements made before the naval committees and in bulletins issued to the newspapers that he is accomplishing real marvels in the direction of saving In the public funds by placing naval contracts with European bidders or in using the figures of the foreigners to heat down the American manufacturers to lower proposals than would be possible without the employment of such a cudgel. There is no doubt that there has been in the Navy Department a substantial saving in the appropriations for the naval estab-lishment by the acceptance of foreign bids or by bringing the American bidders to the foreign price. It did not take long, however, as has been predicted in these columns, for the administration to discover that the placing of orders abroad was a diversion of American money into foreign treasuries and a deprivation of American workmen of an opportunity for employment, since this policy resulted directly in the discharge of employers at plants which would otherwise have been enabled to retain them on profitable work. The same results, detrimental to private concerns, were attributable to placing orders for ship construction at navy yards and increasing the amount of work done at the manufacturing arsenals, powder factories, and other governmental plants.

It has now been left to the Secretary of War to change this policy and to check, if not abandon, the practice

which threatened to injure American industrial conditions. Mr. Garrison has been wise enough to foresee the damage which was being done the administration by a reckless design to make a record in government work by contract. But the conditions attending the particular incident Indicating a change in policy are such as to justly subject the administration to criticism from abroad.

Bids were recently invited for four tugs for the Panama Canal and special efforts were made to induce European shipbuilders to enter the competition. The invitation for proposals was cirulated widely at home and abroad and our consular representatives in foreign parts were instructed to give publicity regarding the prospective contract among foreigners who were possibe bidders. The lowest bld came from a Dutch concern, as might have been expected, and under the usual circumstances it would have been promptly accepted, but Mr. Garrison recommended, and the President approved the recommendation that the order for the tugs be placed at home. with the result that the contract has een made for two tugs instead four, although the government will be obliged to pay \$50,000 more to the American shipbuilder than it would have paid for the two tugs had the Dutch proposal been accepted. The defect in the transaction is confined to the fact that this government made such a determined effort to interest foreign shiphuilders in the contract and then found it necessary to reject the lower foreign bid and accept the higher American bid for less than the number of tugs desired. The comparative prices in favor of the European firm were to be expected; they were a certainty, indeed, judging from the experlence of the Navy Department, and in rejecting the foreign bids it is only natural that the foreigners shall entertain a grievance, having gone to the expense of preparing estimates upon what appeared to be our assurance of the consideration of the proposals on a basis of relative price.

At the same time, there is nothing to be said otherwise against the action of Secretary Garrison and the President. It is time that there should be an appreciation of the harm that has been wrought by a tariff law that makes it possible for foreign manufacturers and shipbullders to come into competition with American firms which pay higher wages to American workmen than are paid abroad and which can only hope to meet successfully the foreign rivals by a reduction in the cost of labor. Mr. Garrison has been sagacious in his recommendation in this matter, and his adoption of a policy that refuses to make use of forelgn bidders to beat down American prices is an example which should not be lost on the Navy Department.

Orland Irrigation Project,

The Secretary of the Interior has authorized the reclamation service to execute contract with Moses Fisher of San Francisco for erecting the diversion dam and other structures of the East Park feed canal, Orland irrigation project, California. The work involves the excavation of about 6,000 cubic yards of material, 4,000 cubic yards of concrete work, the placing of 49,300 pounds of reinforcing steel and 20,500 feet, board measure, of lumber, and erecting 14,150 pounds of metal work The contract price is \$46,388.20, The feed canal is twenty miles long. and its purpose is to divert water from the head of Stony Creek into East Park reservoir. This will increase the volume of storage water in the reservoir and permit the extension of the project to cover a total of 20,000 acres. The Orland project is one of the most sucressful of the government works, and the present brigated farms are among the most highly cultivated in that nortion of California. The government work here already has transformed a region formerly cropped only in wheat into an intensively cultivated agricultural district.

R., Owners, Northern Pacific Rallroad Co. Contractors, E. J. Rounds Construction Co., Walker Bidg, Seattle, Contract price, \$450,000.

CITY HALL MARBLE WORK.

The contract for interior marble work for the new City Hall, has been awarded to Joseph Musto Sons-Keenan Company for the amount of \$233,860

This is the largest single contract for marble work ever let on the Pacific Coast, and the artistic treatment of the public offices and corridors is particularly effective.

The Joseph Musto Sons-Keenan Cohave extensive marble plants in this City and los Angeles and have just completed the Interior marble work for the oakland City Hall, the amount of this contract being \$105,000.

They have also under way the exterior and interior marble work for the Hobart Building, in the execution of which it is contemplated to make a record for prompt delivery and artistic workmanship.

METAL HAILROAD TIES.

About 70 per cent of the ties in use on the federal railways of Switzerland are metal. Metal the were first used on the Swiss roads in 1881, since which time they have gradually replace to a large extent the wooden ties. Iron ties are especially recommended on the Swiss roads where a good quality of gravel is available for ballast—American Machinist.

Local Firm Enters On A New Field.

Holph, Mills & Co. Will Represent Aivey Manufacturing Co. on This Coast in Future,

The Alvey Manufacturing Company of St. Louis, Mo., manufacturers of all kinds of conveying machinery, has actively entered this market by securing the Irm of Rolph, Mills & Co., Kialto Building, as their Pacific Coast agents

Roiph, Mills & Ca. which is composed of Thomas Roiph and H. B. Mills, is a well known and established firm of manufacturers agents, having offices in San Francisco, Seattle and Los Angeles, handling some of the best accounts on the Coast, among which are Messes, Joseph T. Ryerson & Son of Chicago, the Sloss-Sheffield Steel & Iron Company, Birmingham, the Pennsylvania Wire Glass Company, Philadelphia, The Hawaii Hardwood Co., Ltd., of Pahoa, T. H., and the American Perfectile Company, Briladelphia.

In connection with the Alvey Manufacturing Company's agency, they have secured the co-operation of William E. Spink, an engineer who make a speciaty of planning and installing conveying machinery lay-outs for the committed handling of all kinds of products and freight. Rolph, Mills & Company, therefore, are in a position to quote manufacturers' prices direct or prices on the equipment installed. They are also in a position to give expert service and advice in regard to all freight handling problems.

Among the many kinds of equipment handled by this firm are included straight and spiral chutes, gravity and spiral conveyors, movable belt conveyors, movable belt conveyors, automatic lifts and overhead trolleys, as well as special equipment for breweries, creameries, canneries, etc.

This firm's responsibility and experience insures the best and most efficient service for any one intrusting business to them.

FOREST NOTES,

Students of the Oregon agricultural college are working at the forest working at the forest nursery on the Suslaw forest. The arrangement is said to be notually state factory since the students gain extension perience in forest nursery practice and their assistance lowers the cost of nursery work.

Manufacturers have found that red alder from the Pacific Coast is a sulfable material for clothespins. Alder makes a white, smooth, springs pin, as a result of this fact, a clothespin factory, said to be the first on the Pacific coast, may be established at Portland, Oregon.

NOTICE OF DISSOLUTION OF PARTNERSHIP,

A Dissolution of Partnership has been filed between M. HONORE and H LEMM under the name and style of North Star Iron Works, located at No. 1311 Harrison street. Has been dissolved by mutual consent.

Juuction Market, Mason and Turk Streets

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and beat of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Catarrh and Cold in the Head. It makes you miserable, doesn't it? BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Editorial Comment.

THE POWER OF SELF.

One ship drives east, another drives

west, While the selfsame breezes blow;

Tis the set of the sails and not the gales,

That bids them where to go. Like the winds of the sea are the ways of Fate.

As we voyage along through life, 'Tis the set of the soul that decides its goal,

And not the calm or the strife.

—Ella Wheeler Wilcox.

The occupation of school teacher has been one that has been underated by the people generally in this country. Generally speaking people have regarded it us a question of dollars and cents and have driven a hard bargain with the teacher and endeavored to get the most for their money. There has been no union among teachers and as a result the occupation has been taken up almost exclusively by women. Now the importance of the occupation is becoming to be realized and in the different states funds are being provided for pensions for those who have served a certain length of time and a retirement fund for teachers who have reached a certain age.

In this connection Andrew Carnegie has provided a fund to be used for the benefit of the Teaching Profession generally.

The eighth annual report of the president of the Carnegie Foundation for the Advancement of Teaching, shows a total endowment of \$15,325,000, and an expenditure for the year ending September 30th, 1913, of \$658,431. Of this \$519,440 was distributed in retiring allowances to professors and \$80.949 in pensions to their widows, a total of \$600 389 Thirty-three allowances were granted during the year, making the total in force 403, the average annual payment to an individual being \$1,703. The total distribution from the beginning has been \$2,936,927. tional work of the Foundation was senarately endowed in January, by a gift of \$1,250,000 from Mr. Carnegie through the Carnegie Corporation of New York. This body, which is endowed with one hundred and twentyfive million dollars for "the advance ment and diffusion of knowledge and understanding," has five ex-officio trustees, of whom one must always be the president of the Carnegie Foundation for the Advancement of Teaching.

The fund devoted to this purpose is a creditable use to put money and an intelligent charity. While, the profession of teaching should be sufficiently remunerative to prevent the persons engaged in it from becoming dependent the fact is that it is not and the gift of a fund to be used to take care of superannuated and dependent teachers reaches a class that would be hard to leach by general legislation.

William Randolph Hearst has answered ten questions put to him by a German editor on the Canal Tolls question. The Inquiry maturally arises as to whether Hearst has acquired a German newspaper, for certainly no same man would ever ask Hearst a question and expect to get an intelligent and unbiased answer.

Reports from the East from personal friends of Ex-President Roosevelt state that the South American fever has left its mark upon him and that it is doubtful whether or not be will ever be the same man again.

Certainly he is a great example of the strennous life. Originally in poor health he spent some years as a plainsman in Wyoming and built up a rugged constitution. Since then he has been a marvel of activity and his two trips through unknown and dangerous jungles of tropical Africa and South America are only incidents in a life as crowled with action as the tales of Itysses and Agamemon.

The head of the Pullman Company has again been before the Rallroad Commission as to the manner of conducting its business with the public. One thing that Commissioner Eshelman insists on and that is that the porters he naid sufficient wages to enable them to live without depending on tips from the traveling public. No other way can any uniformity of treatment he secured. For as it is now it is said that the porters receive a wage equal to the average monthly loss of articles on the sleepers for which they must pay. The company makes an inventory of all things contained in the car at each trip and if any thing is lost or stolen the porter is held accountable. So that the general average inst about makes the porter's salary and he is compelled to depend on the public for his living. Under such conditions there can be on uniformity of treatment of the public. If the company pays a living wage then there should be uniformly courteous treatment and if such is not accorded the company could always secure better men for their employ.

Mt. Lassen has the center of the stage just at present. It is the dying result of the iong period of cruptions that have spread successive lava flows over the high Sierras in ages past and left the summit dotted with craters and mountain lakes. It is another of nature's wonders close at hand that one may study without going out of the State.

The Landscapist As The Architects Conferee.

Qualifications of the Landscapist, Architects Problem and Nature's Endowment.

H, E, Rasmussen.*

recognized fact that to It is a achieve the best results, one must specialize, hence the efficiency oh. tained in commercial and industrial bnes by the American nation. True, some genius tike an Edison may master all trades, but this is the exception and not the rule. With the progress of modern business, we find necessary to create new trades and The efficiency professions. engineer. whose work has been applauded by the heads of governments and industrial concerns, is a striking example.

The failding of a home a true home where harmony reigns and implants itself perhaps unconsciously to the inmates, is a greater and more worthy task than the building of great industries. Do the American homes equations of old Europe? They may equal those of old Europe? They may equal them in costliness and do surpass them in mechanical devices for comfort and cleanliness, and yet home in America has not the same meaning as in the old country."

The real home is the place of all places with which you are in full sympathy, built to suit your own tastes and particular fancies, a refuge of peace with "nerve soothing surround-Have you built such homes, Mr. Architect, for your clients, or have you mainly aimed at surpassing your competitor in extravagance and grandeur and thereby having missed the essential? The medical profession has found that certain colors have a soothing and curative effect on patients suffering from various diseases, thus proving that the surroundings of a home, if beautified by a specialist, is an incentive to good health and happiness. The architect unfortunately too often overlooks this important part of the work entrusted to his care, or attempts to plan the work for which he cannot spare the time to acquire the special knowledge required if he excels in his own particular profession, or his indifference to the surroundings of the home he is about to bulld, ofttimes causes him to err in selecting the man to do the work. He often selects an Eastern landscape architect, who has no knowledge of local conditions and no interest in its development; or worse still, engages a dealer in plants whose sole object is to dispose of any surplus stock without regard to the effect when planted.

The qualifications of a Lausscapist. To become a successful landscapist in any particular place, one must familiarize himself with the soil and changing seasons before he is able to operate or advise. For instance, a landscapist from the east is no more capable of giving advice on conditions as they exist here than an architect from the torial zone would be capable of advising on the architecture and heating systems of the north.

The landscapist must have many qualities to rightly perform his ditter. He must be an artist with strong luagination in order for him to see the completed work in his mind's eye. His is a picture which takes at least a

decade to finish, it grows under his care, he must know his material, the plants, and how each one develops and their inter-relation regarding their color and shape. He must have an eye to the graceful lines which will harmonize with the architecture of the building and surrounding landscape. He must have knowledge of botany. and chemistry sufficient for him to analize the soil and determine which is hest suited for each kind of plant. He must have sufficient knowledge of engineering and architecture to work out his scheme in harmony with the architect and engineer; he must love his work sufficiently in order that he does not neglect his aim. The true aim of an artist is to create the very best under the circumstances, instead of mere economical advantages to him-He must also possess a certain SPIT knowledge of human nature and tact in order to become intimate and familiarize himself with the likes and dislikes of the home-builder, and then plant a garden in accordance with the individual tastes. Is the landscapist regarded here by the architect home-builder with due consideration. in view of the knowledge he must possess in addition to his being a practican man? He is not! and I think to a great extent through faults of his own, or rather those in the trade, a trade where organization and co-operation have taken but little root.

The Problem Refore the Architects.

I well appreciate the fact that the architects have difficulty in choosing the right man, few landscape architects having graduated or passed examinations. The only way is to choose a man who has proved himself successful in obtaining results in a given locality. . If he has succeeded in producing favorable results on a small area, he is likely to succeed on a larger scale because it is as a rule more difficult to lay out a small piece of ground to get the desired effect than one which is 1 d so congested.

In my opinion the home-builder often commits a serious error in erecting too large a residence for the size of the ground, which gives the place appearance of being top-heavy, the and the money expended on the building is out of all proportion to spent on beautiying the surroundings. No matter how beautiful the design of a house, everyone must admit it takes the skill of the well-trained landscapist to bring out the beauties of the architect's work. However, pleased to note the younger generation is inclining more and more towards the outdoor life, and the development of school gardens will encourage this tendency.

Let me sam up, what in my opinion is necessary to bring about the proper relationship between the home-builder, architect and landscapist-

I That all three get together from the first the Landscapist's business being to help the home-builder choose his site after baying learned his requirements, or to tell the home-seeker the possibilities of the ground already chosen.

 That at least one-fifth of the entire cost of the home be devoted to the beautifying of the grounds.

That the proportion of the site of the building to that of the grounds be duly considered by all three, and the position and elevation of the buildings be determined

4. That the landscapist be put in charge of the clearing and excavating from the first, with a view to preserving any top soil present, and the most comomical way of disposing of any poor bottom soil, which is now in most cases spread over the entire but.

5. Plans of the garden to be submitted to the architect to ensure proper barmony with the building, such plans to include permanent planting plans

6. Care of the grounds to be allotted to the landscapist for at least six months after the completion of the planting.

This arrangement, which could easily be hased on business lines, would result in infinitely better and truer homes and save needless expenditure and worry to all parties concerned.

Each home costing say \$5,000 ought to be thus considered, and let me add, in planning a city or town, a landscapist conversant with climatic conditions and the soil would often be able to advise in grading and save a community thousands of dollars, and much more in a number of cases, to say nothing of results obtained regarding beauty and harmony in planting, etc. This has been done in Canadian cities and in Denver the architects have to some extent taken into consideration the landscapist and treated him with some semblance of respect for his trade, with the result establishing a most beautiful city.

Each town of 10,000 inhabitants should be able to maintain a local honocapist and treat him so that he can respect himself. For larger undertakings, such as parks, cemeteries, golf links, etc., a larger local firm's assistance may be required.

The Possibilities Afforded by Nature. I have perhaps severely criticised both architect and home-builder, and if so, it is because I so clearly see the immense opportunities afforded us by nature on this beautiful Pacific Coast: opportunities unequaled in any other civilized part of the world. Here, indeed, in my opinion, is the cradle for the future race, if the Cancasian race is to retain its present supremacy. It is largely dependent on our attitude toward life if this is to be so; and you architects of the west, together with the man of pecuniary influence, have it almost in your hands to mold this upgrowing new American race, in which not the dollar alone will predominate, bu the more refined qualities in man will come to be recognized. Exert this influence and become not only builders of brick and wood, but one of human flesh and mind, and help create the structure of human society in which there shall be room for happiness and neacc.

You are able here in a new country to lay the foundation without the obstacles one has to contend with in the old established communities, and it is realized more, day by day, that you are working on historic territory, and that a happy, care-free people once occupied these shores.

With our modern scientific equipment for producing, together with the nat-ural advantages, here indeed in the locality where a new race composed of all the best who have fied from the old countries with their various social and economic forms of oppression could be built, dominating the world, not by the power of arms, but by setting an example in living a scientific life, with human happiness as its aim. Numerous signs are here that a start is made toward that end, for no where are such playfields and boulevards connecting natural parks, the maintainance of which could be improved upon, also the planting plans bear evidence that they were not made by a man conversant with the possibilities and climate of the northwest, many eastern effects having been produced with "hardy" wild roses, which have an excuse in the east with temperatures often below zero, but not here where softer evergreens, with flowering shrubs and bulbous plants and perennials to give color in early spring, would be a ten-fold improvement, to say nothing of the planting of hybrid roses, in fact, roses of all kinds, to which this climate offers the ideal conditions. Roses may here be blooming outdoors nine months of the year, and many varieties classed among evergreens retaining their leaves during the greater part of the winter.

The possibilities are not only to have parks as fine as Europe, but the creation of a distinct western type of landscape architecture. The Pacific highway, now under construction, should carry with it a high artistic and humane spirit. Let fruit trees to sult each locality be planted by the wayside, affording the touring millionaire, as well as the passing tramp, the oportunity of gathering the Juscions fruits free of charge, and, as in Saxony, the remainder of the barvest paying for the maintainance of the road under proper care, to say nothing of the artistle effect.

More than anything, the stablishment over the land of school gardens will bring about almost the lost love for nature, so if for no other reason, Mr. Architect, let the business aspect appeal to you to get on the right line. Good gardens will be requested before long, and the architect able to give them will get the business. The homebuilder will soon detect whether you have properly considered this question, or he will himself take it in hand.

If I have been wrong in any of my assertions, I hope the architects of the northwest will take up the question with me in public for discussion. If 1 trust their organization will not. consider my contention, and, as an acready well organized body, help establish a new worthy craft, that of landscape architecture. The two organizations, wheo properly established, each one in co-operation with each other, would build new real homes and with them a new race.

GENERAL SAFETY SUGGESTIONS.

State industrial Accident Commission Gives Valuable Pointers to Employ-ers as to Rules to Be Observed in Enctories and Places of Employment.

In response to a general request from the employers of California for suggestions which will enable them to guard machinery so as to prevent accidents, the Industrial Accident Commission has issued in four parts a brief statement covering certain fundamental requirements relative to safety as observed in other states and in foreign countries.

Belts and Pulleys

Belts and pulleys should be so located, wherever possible, as not to be dangerous to employees, or should be properly enclosed, fenced or otherwise protected. In all cases the point, if exposed to contact, should be guarded where the helt, rope or chain runs on the pulley, sheave or sprocket.

Guard all horizontal belts, ropes or chains driving machinery or shafting, seven feet or less from the floor, where exposed to contact.

In guarding overhead belts or rope drives, unless so guarded that persons cannot pass under them, the width of the guard should not be less than the width of the belt or rope drive and the length should not be less than the distance between the outer faces of the two pulleys. It should cover outer faces of the two pulleys or sheaves and extend upward to such a point, and be attached in such a way that in case the belt breaks, it will withstand the whipping force of the belt,

In rooms, or parts of rooms used exclusively for transmission machinery. such as the ground floor of saw mills and the basements of paper mills or flour mills, it has been found practical to define certain passageways for the use of oilers and millwrights and to guard the pulleys, belts and shafts along these passageways.

All loose pulleys should be furnished with a permanent belt-shifter, so located as to be within easy reach of the operator. The belt-shifter should the operator. be so constructed as to make it impossible for the helt to creep from the loose pulley back on the tight pulley. All belt-shifters should be equipped with a lock or other efficient device to prevent the shifter from being accidentally shifted.

Pulleys should be so placed as to allow the width of the helt between two pulleys, or between the pulley and the shaft hanger, or a hook should be provided, or a guard placed adjacent to the pulley to prevent the belt from leaving the pulley.

Part Two.
Set Screws. All set screws on moving parts, where exposed to contact, should be countersunk or protected by a solid collar, or a headless set screw should be used. No part of the set screws should project above the surface

All revolving shafting Shafting. less than seven feet above the floor lines should be boxed or railed off, as revolving shafting is always a menace to those whose cluthing might come in contact with it.

Projecting keys in shafting should be guarded or cut off.

Genrs. All gears, where exposed to contact, should be entirely enclosed or equipped with a flange guard which will enclose the teeth of the gears, On large gears, such as those on heavy shears and punches, the guard should he such as to cover them to a height of seven feet above the floor.

Where it is impracticable to cover the gears, a boxed frame of metal or wood should be installed, completely shutting off the machinery gears. is necessary that all guards should be kept in place except when the machinery is shut off for repairs.

Part Three.

Grinding Wheels, Hoods and Guards. Wheels should be handled with the greatest care in unpacking, storing, delivering, etc., and should never be left standing on the ground or wet

Great care should be used in mounting wheels; never force a wheel on the arbor. It is advisable to use relieved flanges, compressible washers otween wheel and flange, and to obtain a perfect bearing at the outer edge of the flange. Vibration should be avoided at all times.

A protective bood, or guard, should be provided, wherever practicable, and the nut on the end of the arbor should be guarded. Cast iron hoods should he avoided as they have often been known to break when struck by a bursting wheel. The guard should be adjusted close to the wheel and extended over the top of the wheel to a point thirty degrees beyond a vertical line drawn through the center of the wheel. Wheels used for wet grinding should not be left partly immersed in the water.

Foremen should examine every emry wheel each day and see that the bearings are tight and well oiled, and that it is operated within proper speed limits, and is safe in every way.

Table of Grinding Wheel Speeds.

Diameter of Wheel in Inches.	Revolutions per Minute for surface Speed of 4000 ft.	Revolutions per Minute for surface Speed of 5000 ft.	Revolutions per Minute for surface Speed of 6000 ft.

36	421	531	637

The revolutions per minute at which heels are run is dependent on conditions and in actual practice from 4,000 to 6,000 feet per minute up to as high as 7,500. It is recommended that for most grinding operations revolutions should not exceed 6,000 feet. As a wheel wears down the speed is increased to maintain the same surface speed and great care must be exercised when new wheel is provided to ayoud over-spreading

Part Four.

Ladders, Ladders should, wherever possible be stationary; if movable, they should be provided with either sourp points at the foot, or wide, rough surface feet so as to prevent slipping. Ladders for use in oiling overhead shafting, where necessary to rest same on the shafting should be arranged to book over said shafting

Stairways. Stanways should not be built at a sharper angle than fifty de-For over tifty degrees, ladders grees. should be used instead. All stairways should be equipped with hand rails. Where the stairway is not built next to a wall or partition, rails should be placed on both sides

Platforms and Hunways. All elevated walks, runways or platforms, except on loading or unloading side platforms, if four feet or more from floor level, should be provided with a A toe board should be proguard rail. vided to prevent material from falling

Passageways-beep Clear. All pas-

sageways and gangways should be kept smooth and in good repair and free from nails or obstructions over which persons may stumble and fall

swinging Doors - Windows, All swinging doors in stairways and all doors swinging both ways in general passageways should be provided with windows. One window should be provided for each section of double swinging doors. Both sides of the doors should be provided with adequate light, either natural or artificial during the hours of active operation in the department in which said swinging doors are located. The windows must be kept free from dirt or other obstruction to the vision.

In order to accommodate boys or girls, the bottom of the windows should not be more than forty-eight inches from the floor. The size of the window which is recommended should be not less than eight inches by twenty-four inches. Guards should be placed over the window to protect the glass from being broken by protruding parts on trucks etc.

Further information can be obtained from the Industrial Accident Commission, 525 Market street. San Francisco,

Firms desiring news no special classes of buildings, such as Banks. Churches, Schools, Hotels, etc., will find such items nil classified and grouped under proper headings, commencing on this page. These same Items are again repeated under "LOCADITIES" in the last part of our news deportment.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house a story and hase. Class C construction. \$15,000, Architect, Frederick H Meyer, Bankers' Investment Bldg., S. F. The building er. Walter S Sullivan. will be erected at the corner of Sacramento and Taylor streets, covering an area of 40 by 90 feet. Interior will be arranged for a number of two and three room suites, all of which will have wall beds and private bath rooms Pine and elm panels will be used for interior finish together with some hardwood floors. Plans provide for steam heat, elevator service and a hot water plant. Bath rooms will have tile wainscot and composition floors Entrance will be finished in marble and tile. Exterior of the building will be faced with pressed brick. Plans are now being prepared

SAN FRANCISCO-Apartment house. 6 story and base. Class C construction. Cost not stated, Architect, Benj. G. Mcougall, Steldon Bldg, S. F. Owner, H. Voorman. The building will erected at the northwest corner Bush and Mason streets, covering an area of 68 feet 9 inches by 90 feet. Upper floors have been arranged for a total of twenty-three suites of two and three rooms. Interior will be finished in pine with some hardwood veneer. All apartments will have private baths and wall beds. Plans provide for steam heat elevator service and a hot water and vacuum cleaning system Bath rooms will have tile wainscot and composition floors Entrance will be finished in marble and tile. Exterior of the building will be faced with pressed brick Plans are complete and segregated figures are being taken on all parts of the work except the plain and reinforced concrete work which has been awarded to Arthur Arlett for \$7,350.

SAN FRANCISCO-Apartment house, 3 story and base, frame, \$10,000. Architect, none Owner, John Bianchl, 3702 Folsom street, S. F. The building will be erected at the southeast corner of Cortland avenue and Polsom street, covering an area of 41 by 46 feet, There will be eight apartments of four tooms each. Interior finish will be of pine and redwood. Each apartment will have an open fire place with brick There will be private baths mantel. and wall beds. Exterior of the building will be covered with rustic. Plans are complete and in the hands of the owner who will do the work by Day Labor Materials are now being purchased

SAN FRANCISCO-Apartment house. 7 story and base. Class A construc-Cost not stated. Architect Houghton Sawyer, Shreve Bldg. S. F Owner's name withheld. The building will be erected on a corner lot in the Fifty Vara District, and has been arranged for but six apartments, one to each of the first five floors while the upper two floors will contain but one apartment. There will be a complete steel frame, brick exterior walls, faced with pressed brick and terra cotta, hollow tile and metal lath and plaster interior partitions and concrete floors, Interior decoration and finish will be to suit the tenants. Each apartment will have three baths. Hardwood trim and hardwood and inlaid floors will be used extensively There will be steam heat elevator service vacuum cleaning and a hot water simply. Plans are nearly ready for figures

OAKLAND, CAL-Apartment house. 3 story and base, frame Cost not stat-Architect, C. S. Schwartz, Havwards Owner, John D. Garrison. building will be erected at the corner of 41st and Manila streets, and will contain a number of two and three room suites. Interior finish will be of

pine throughout. There will be a central heating system and hot water sunnlv All apartments will have wall herts and private both rooms Tile wainscot and composition floors will be used in the bath rooms. Exterior of the building will be covered with rustic and shiplap. Plans are complete and figures are being taken

SAN FRANCISCO-Apartment house. 5 story and base, steel and reinforced concrete. Cost not stated. Architects, Rousseau & Rousseau, Monadnock Bldg., S. F. Owner's name withheld. The building will be erected on the outh side of O'Farrell street east of Hyde, and has been designed to contain a total of 24 suites of two and three rooms. There will be a complete steel frame, reinforced concrete walls and metal lath partitions. Interior finish will be of pine with some elm panels. Plans provide for steam heat. an automatic elevator and hot water supply. Some hardwood floors will be used. All apartments will have wall heds and private bath rooms. Bath rooms will be finished in tile and will have composition floors. Exterior of the building will be faced with pressed brick and terra cotta. Plans are now being prepared.

OAKLAND, CAL,-Apartment alterations and additions, frame construction, \$5,000. Architect, none. Owner, P. A. Soderstrand, 1086 24th street Oakland. The work will include new plumbing, plustering, painting, electric work and interior finish. beds will also be installed. Considerable exterior work will also be required. Plans are in the hands of the owner and he will do the work by Day

SAN FRANCISCO-Apartment house, 4 story and base, brick and steel, \$75,-0.00 Architect, G. Albert Lansburgh, 709 Mission street, S. F. Owners, William Hendrickson, trustee. The building will be erected on the north side of Sutter street west of Taylor street. The building will contain a total of 24 suites of two and three rooms, besides a large lobby and amusement room. Interior finish will be of pine, oak and other hardwoods Hardwood floors will be used in the living rooms. There will be steam heat, automatic passenger and freight elevators, a vacuum cleaning system and hot water supply. All apartments will have wall beds and private bath rooms. Bath will be finished in tile and will have composition floors. Entrance will be finished in marble Exterior of the building will be faced with pressed brick and terra cotta. Plans are complete and figures will be called for at once.

Contracts Awarded. SAN FRANCISCO—Apartment house, 3 story and base, \$16,000. Architect. C O. Clansen Hearst Bidg. S F. Owner, Mr. Revilli. Contractors, Ratto & Ratto, S. F. Contract price, \$11,000. Notes This price does not include the lumber or mill work or plastering.

LOS ANGELES, CAL - Apartment house, 3 story and base Class C construction, \$50,000. Architect, L. Mayo, Story Bidg. L. A. Owner, R. J. Dunn, Contractor, L. T. Mayo, Story Eldg., L. A. Contract price, \$50,000.

LOS ANGELES, CAL - Apartment house, 3 story and base. Class C construction, \$36,000. Architect, none Owner, Elias A. Shedondy. Contractors, The L. F. S Syndicate, Los Angeles Investment Bldg., L. A Contract price, \$36,000.

BONDS.

SUNNYVALE SCHOOL DISTRICT. Santa Clara Co.-Sealed proposals will be received by the Board of Supervisors on the 6th day of July for the purchase of bonds in the amount of \$25,000

PAYRAN SCHOOL DISTRICT, Sonoma Co .- An election will be held here on June 27th for the purpose of voting bonds in the amount of \$3,000, same to he used in raising funds for a new school building and other improvements

WRIGHTS SCHOOL DISTRICT, Santa Clara Co .- Bonds in the sum of \$1 .-800 will be voted here on June 20th, funds to be used for the construction of a school building and the purchase of the necessary equipment.

SPARKS, Nev .- On petition of 100 citizens, asking that street and sewer bonds of \$25,000 be authorized, a hond election has been set for July 18th.

BAKERSFIELD, Kern Co. - State highway honds to the amount of \$180,-000 were ordered purchased by the Board of Supervisors, These bonds will cover the expense of building the State highway from a point 13 mlles south of Bakersfield to Rose station.

PETALUMA, Sonoma Co.-The Board of Supervisors here has decided to advertise for hids on the Petaluma School Bonds. The bonds are for \$110,000, the money to be used in the construction of a school building.

BERKELEY, Alameda Co .- This city will soon call a hond election for voting honds in the amount of \$1,750,000 to meet the immediate needs in the school department, for a civic center, and for harbor improvements.

FALLON, Nevada - The Churchill Chamber of Commedce has appointed a committee to have a proposal for a \$50,000 Lincoln Highway bond Issue put on the November ballots.

SANTA CRUZ, Santa Cruz Co .- The City Council has unanimously voted to call a bond electon for \$150,000 for the purpose of extending municipal water system.

OAKLAND, Alameda Co.-The Auditorium bonds carried by 137 votes. There were 15,849 for the bonds and 7,719 against. The bonds are for \$500,-800 to complete the building, bringing the total cost up to one million dollars.

BRIDGES AND DAMS.

CLATSOP CO., ORE .- Bridges, five steel and concrete. Cost not stated. Engineer, State Highway Commission. Court House, Astoria. Owners, Clat-sop County. Blds will be opened on June 22nd for the construction of the following described bridges. Plans and full particulars can be secured by addressing the Highway Commission. County Court House, Astoria.

No. 1. 125-foot steel bridge with piers and approaches in Nehalem Valley near station 29 on the State Highway survey.

No. 2. 125-foot steel bridge with piers and approaches on Nehalem Valley road over Nehalem river near station 217 on the State Highway survey. No. 3. 80-foot steel bridge with plers

and abutments on Seaside to Tillamook road near station 422 on the State Highway survey

No. 4. 68-foot steel bridge with abutments over North Fork of the Ciatskanle river, two miles from Olney.

No. 5. 80-foot steel bridge with piers and approaches over Youngs river about four miles from Olney.

PORTLAND, ORE.-Bridge, steel and Engineer concrete. Cost not stated. State Highway Commission, Portland Owners State of Oregon. The new bridge will be 277 feet long, consisting of two spans, one 200 feet and the other 77 feet long. Plans are complete and figures will be opened on June 24th. Plans can be secured from the Com-Court House Bldg., Portland.

MADERA, MADERA CO., CAL -Bridges, 8, steel and reinforced con-Cost not stated. Engineer. Surveyor. Madera Owners, Madera County. Proposals will be opened on June 20th for furnishing designs and constructing eight steel and reinforced concrete bridges in Madera County. Complete information can be secured from the County Clerk at Madera. An official proposal for this work appears in another column of this issue.

SAN JOAQUIN RIVER, CAL-Dredging. Cost not stated. Engineer, Major S. A. Cheney, Custom House, S. F. Owners, United States Government Blds are now being called for dredging the San Joaquin River and Stockton Channel. Bids will be opened on June 25th. Full particulars can be secured from the engineer in charge. An official proposal appears in another column of this issue.

CHURCHES.

SAN FRANCISCO-Church, 1 story and base, frame, \$15,000, Architects, Shea & Lofquist, Bankers' Investment Bldg., S. F. Owners, St. Mary's Star of The building will be erected the Sea. at the northwest corner of Geary and 8th avenue, and will contain the main auditorium seating in the neighborhood of 700 people and Sunday school rooms. Interior finish will be of pine with some ornamental plaster in the auditorlum. Art glass windows are specified. Exterior of the building wid be covered with cement plaster on metal lath. Plans are complete and

figures are being taken. BERKELEY, ALAMEDA CO., CAL .-Church, 3 story and base. Class C construction, \$50,000, Architect, Eugene K. Martin, 2192 Shattuck avenue, Berkeley. Owners, First Baptist Church of Berkeley. The building has been mentioned in these columns before. A site at the corner of Dana and Haste streets has been secured and a building covering 95 by 115 will be erected. The main auditorium will be 75 by 80 and Sunday school rooms and a social hall will occupy a like amount of space. Interior finish will be of pine with ornamental plaster. A central heating system will be installed. Exterior of the bullding will be faced with cement Plans are complete and figplaster. ures will be taken at once.

COURT HOUSES.

SEATTLE, WASH .- Court House. 3 or 5 story and base. Class A construction, \$950,000. Architect, A. Warren Gould, American Bank Bldg., Seattle. Owners, King County. Plans have been completed for the new County Building which is to cover an entire block in Seattle. Bids are to be submitted on two alternate propositions, but in either case must not exceed the amount of \$950,000. The first proposition will call

for a timec-story building covering the entire site with a hye-story central portion. The second proposition will call for a five-story building over the entire lot and a seven-story central nortion. Plans and specifications with complete instructions can be secured from the architect.

FACTORIES & WAREHOUSES.

RICHMOND, CONTRA COSTA CO., 'Ala-Stables and garage. I frame and corrugated iron. Cost not stated. Engineer, Engineer Department Standard Oil Co., Standard Bldg , S. F. Owners, Standard Oil Co. Property at the corner of Berryessa and Green streets has recently been purchased and a large stable covering an area of 100 by 160 feet will be erect-There will be a cement floor and exterior will be covered with corrugated iron. Plans are complete and construction will be started at once by Day Labor.

FLATS.

SAN FRANCISCO-Flats, 2 story and base, frame, \$5,000. Architect, Paul F. De Martini, 2123 Powell street, S. F. Owner, Mr. Wilson. The building will be erected on Collins street near Geady and has been designed to contain four flats of five rooms each. Interiors will he finished in pine and redwood with some oak floors. There will be an open fire place in each living room. Mantels will he of tile. Bath rooms and kitchens will have tile wainscot. Automatic water heaters will be installed. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and figures are heing taken.

SAN FRANCISCO-Flats, 3, 2 story and base, frame, \$4,000 each. Architect, none. Owners, C. J. and W. J. Keenan, 300 Webster street. These buildings will be erected on the north side of Haves street west of Central avenue, each covering an area of 25 by 60 feet. There will be two modern flats in each building, rior will be finished in pine, redwood and elm panels. Hardwood floors will be used in the principal rooms. living room will have an open fire place and tile mantel. Bath rooms will have tile walnscot and composition Automatic water heaters be installed. Exterior of the buildings will be covered with rustic and cement plaster on metal lath. Plans are complete and in the hands of the owners who will do the work by Day Labor.

SAN FRANCISCO-Flats, 2 story and base, frame, \$4,000. Architect, C. A. Bldg.. Meussdorffer, Humholdt Bank S. F. Owner, F. Gottlicher. The building will have a frontage of 25 feet and a depth of 52 feet. There will be two flats of five rooms each. Interiors will he finished in pine throughout. There will be a large open fire place in each living room. Mantels will he of tile. Automatic water heaters will be installed. Bath rooms and kitchens will have tile wainscot. Exterior of the building will be covered with rustic with a brick veneer base. Plans are complete and figures are being taken.

SAN FRANCISCO-Fats, 2, 2 story and base, frame, \$5,000 each. Architect, none. Owners, C. J. and W. J. Keenan, 300 Webster street, S. F. These buildings will be erected on the west side of Central avenue south of Hayes and each will contain four fiats of four

and five rooms. Interior, will be finshed in joine with some clin planels and bardwood floors. There will be open five places and tile mantels. Automatic water beaters will be installed. Bata rooms and kitchens will have tile wainscot. Exteriors will be covered with ristic and cement plaster on metal latte. Plans are complete and in the lainds of the owners who will do the work by Day Labor.

OAKLAND, CAL .- Flat and store, 2 story and base, frame, \$4,500. Archi-James W. Plachek, Acheson Bldg Berkeley, Owner, G. Dehenedetti. building will have a frontage of 41 feet and a depth of 24 feet. There will be one store on the first floor. Upper floor will be arranged for a flat of six rooms. Interior will be finished in pine throughout. Some hardwood floors will be used. Bath room will have tile wainscot. An automatic water heater will be installed. Exterior of the building will be covered with cement plaster on metal lath. Plans are now being prepared. BERKELEY, ALAMEDA CO., CAL.

Flats, 2 story and base, frame, \$6,500. Architect, James W. Plachek, Acheson Bldg., Berkeley. Owner, Mrs. Eugene 10h rest The huilding will be erected on Berkeley Way, and has been designed to contain four high class flats. Interiors will be finished in pine, redwood and hardwood veneer. Hardwood floors will be used in the living rooms and dining rooms. There will be open fire places and tile or brick mantels. Automatic water heaters will be installed. Bath rooms will have tile wainscot. Exterior of the building will be covered with rustic and cement plaster on metal lath. Plans are complete and figures are now being taken.

GOVERNMENT WORK AND SUPPLIES

Brigham City, Utah, Construction. The following bids were received by

the supervising architect, Treasury Department, Washington, D. C., for construction (finduling plumbing, gas piping, heating apparatus, electric conduits and wiring, interior lighting faxtures, and approaches) of the U. S. post office at Brigham City, Utah:

Bid 1. Martin E. Anderson, Brigham City, Utah.

 J. H. Wlese, City National Bank Building, Omaha, Neb.

Building, Omaha, Neb.
3. George A. Whitmeyer & Sons, Ogden. Utah.

Proposal No. 1 tusing light-colored limestone for all stonework, except where granite is required — Bid 2, \$53,-870; 3, \$50,284,

Proposal No. 2 (using light-colored sandstone for all stonework, except where granite is required)—Bid 1, \$53.-870; 2, \$53,130.

For alternate No. 1 (substituting Keene's cement for hard plaster on walls in the first and second stories, as specified) add—Bid 1, \$460; 2, \$800; 3, \$205.

Some changes were made in the original specifications, and the two low men were asked to refigure.

TURKISH BUILDING—I and 2 story frame and plaster, \$40,000. San Francisco. Architect's name not given. Owners, Turkish Government. Contractors, Northwest Construction Co. Merchants Exchange Bidg 8 F Contract price, \$40,000,

APARTMENT HOUSE—3 story and base, frame, \$16,000. San Francisco Architect, C. O. Clausen, Hearst Blog., S. F. Owner, Mr. Revilli, Contractors, Ratto & Ratto, S. F. Contract price, \$11,000. Note: This price does not inclinde the lumber or mill work or plastering.

CITY HALL MARBLE WORK.

The contract for interior marble work for the new City Hall, has been awarded to Joseph Musto Sons-Keenan Company for the amount of \$234,860.

This is the largest single contract for marble work ever let on the Pacific Coast, and the artistic treatment of the public offices and corridors is particularly effective.

The Joseph Musto Sons-Keenan Co. has extensive marble plants in this city and Los Angeles and has just completed the interior marble work for the Oakland Clty Hall, the amount of this contract heing \$105,000.

They have also under way the exterior and interior marble work for the Hobart Building, in the execution of which it is contemplated to make a record for prompt delivery and artistic workmanship.

Architectural Club Wins Scholarship.

Lecal Cinb Members Carry Away All Three Prizes in Annual Scholarship Competition.

Each year for three successive years a member of the San Francisco Architectural Club has won the thousand dollar Ecole Beaux Arts Scholarship prize affered by the Architectural League of the Pacific Coast. In this year's competition the first, second and third prizes were won by members of the local club. P. J. Weber, employed by Shea & Lofquist, won the nuch coveted first prize; F. Albamand Jr. employed by the Toyland concession at the Exposition, second and Fred M. Kramer, employed by Bliss & Faville, won third place.

The Architectural League of the Pacific Coast was organized in 1909, with clubs in San Francisco, Los Angeles and Seattle, and each year since the League has offered an annual scholarship prize of one thousand dollars using the problems prepared by the New York Society of Ecole Beaux Arts in awarding the same. This year's problem consisted of the design of a 'ustom House for the United States and required the preparation of complete floor plans, one section and the facade. Judges were selected from among the members of the New York Society of Ecole Beaux Arts, which includes such well known members of the architectural profession as Cass Gilbert, Paul Crete and Henry Bacon.

Architectural Clubs included in the League of the Pacific Coast are those of the University of California, San Francisco, Los Angeles, Portland, Seattle and Denver. Members from each of there submitted designs and the local club takes great pride in the fact that all three winning designs were worked up in its atteier. The patrons of the San Francisco Architectural Club's steller are Architects John Baur.

Arthur Brown Jr., and L. Bourgeois, to whom much credit is due for their valuable criticism of the work

C. I. Harrison of the San Francisco Architectural Club won the 1913 scholarship and Edward L. Frick won the 1912 scholarship, Edward L. Frick has been in Paris for the last two years and this year was awarded the Grand Prix at the Ecole Beaux Arts out of a class of over nine hundred students. an honor which has not been conferred upon an American student in Paris in over fifteen years.

A large number of the designs submitted in this year's competition, including the three winning designs, are now on dispay in the rooms of the San Francisco Architectural Club 126 Post Street, where they may be viewed by the nublic.

Two Local Firms Low On Illinois Building.

Beceives Advise that Low Men Will Re-figure Work,

Guy Cramer, local representative of the Illinois State Building Committee, 302 Lachman Bldg., has received word from Chicago, where hids for the construction of the Illinois Building at the Panama-Pacific Exposition were opened, to the effect that Lange & Bergstrom and the Denell Constr. Co. are the two lowest bidders. Mr. Cramer's advise further states that it will probably he necessary to make some revisions in the plans and specifications and that the work will be re-figured by several of the lowest bidders.

Tue Illinois State Building was derigned by the State Architect, James B Dibelka of Chicago, and will cost in the neighborhood of \$90,000. Included in the work are iron stairways, metal windows, concrete foundations and other materials of a more permanent nature than has been specified in the other buildings.

PORTLAND AND OREGON.

BRIDGES-Five, steel and concrete. Cost not stated, Clatsop Co., Ore, Engineer, State Highway Commission, Court House, Astoria. Owners, Clatson County. Bids will be opened on June 22nd for the construction of the following described bridges. Plans and full particulars can be secured by addressing the Highway Commission, County Court House, Astoria;

No. 1. 125-foot steel bridge with piers and approaches in Nehalem Valley near station 29 on the State Highway survey.

No. 2, 125-foot steel bridge with piers and approaches on Nebalem Valley road over Nehalem river near station 217 on the State Highway survey

No. 3. 80-foot steel bridge with piers and abutments on Seaside to Tillamook road near station 422 on the State Highway survey. No. 4. 68-front steel bridge with

aboutments over North Fork of the Clatskanie river, two miles from Olney No. 5. 80-foot steel bridge with piers

and approaches over Youngs river about four miles from Olney. ERIDGE-Steel and concrete.

not stated. Portland, Ore. Engineer. State Highway Commission, Portland. Owners, State of Oregon. The new bridge will be 277 feet long, consisting of two spans, one 200 eet and the other 77 feet long. Plans are complete and figures will be opened on June 24th. Plans can be secured from the Commission, Court House Bldg., Porttand. CONVENT-4 story and base, rein-

forced concrete, \$125,000, Portland. tire. Architects, Jacobberger & Smith, Pourd of Trade Bldg., Portland. Ownets Sisters o the Good Shepherd. The milding will be created on the propcity bounded by Congress Bryant, Alour and bekum streets, and will cover an area of 210 by 145 feet. Conshortion will be prepried. There will c arge dermitories a number of class cooms, dining rooms kitchen, chapel and office. Interior will be finished in jum throughout. Plans provide for steam leat and elevator service. Exterms of the building will be faced with pressed brick. Separate bids are now being taken for the general contract and for the heating and venti-

SEATTLE AND WASHINGTON

COURT HOUSE-3 or 5 story base. Class A construction. \$950,000. Seattle, Wash. Architect, A Warren Gould, American Bank Bldg, Seattle. Owners, King County Plans have been completed for the new County Building which is to cover an entire block in Sentitle Buls are to be submitted on two alternate propositions, but in entier case must not exceed the amount of \$950,000. The first proposition will call for a three-story building covering the entire site with a five-story central portion The second proposition will call for a five-story building over the entire lot and a seven-story entral portion. Plans and specifications with complete instructions can be secured from the architect.

POST OFFICE—2 story and base, stone and brick. Cost not stated bladio Falls, dath. Architect, Supervising Architect, Supervising Architect, Supervising Architect, Washington, b. c. owners. United States Government owneleted for this building and show a twe-story structure distribution of the first floor. The building will cover age of a percentage of the first floor and the first floor of the first floor and the first floor of the first floor and the first floor will be facel with a first floor will be facel with a first floor will be facel with a first floor of the facel with a

IUE HINK-1 story and box steel and brick, \$150,000, Scattle Wash, Architect's name not given. Owners, Pitrik Bros, Vancouver, B. C. Contractors, Minhattan Co. Central Bldg., Scattle, Contract price \$150,000,

A WORLD CAPITAL.

All Nations to Co-operate in the Building of an Ideal International City,

A grandly dealest project has recent's been hanneled by an international organization known as the World Conscience Scorety." The deit's and plan were conceived and perfected after the nyars of altruistic ator and study on the part of Hendirk of rightn Anderson, an American-Sandinavian sculptor residing in Rome assisted by some 40 sculptors, artists, ensureers architects, and scientists and has for its object the sent dishment of an ideal world city where all international activities are to have they home and inspiration.

A review of the massive and beautifully illustrated volume which embodies the plan in its details was resembly collected in the Vontaly Bulletin of the Pan American Pinon. "This proposed international city"—writes the reviewer—"its to be a city of light

bestift, wide avenues, parks, play-grounds, fountains, laguous, and node buildings, outside the players of the property of the

"As designed it will cover some 10 square miles of ground. Its architectural plans are so drawn that it can be built at almost any spot accessible to the sea that the nations may choose. While there is ample room within the limits of the city for the homes of the permanent inhabitants and the necessary business and manufacturing plants, the heart of the city is composed of buildings adapted to the unification of international interests. These are grouped into three centers devoted respectively to science, art, and physical culture. The scientific center is connected with the center of art by the broad Avenue of Nations, flanked on either side by palaces which will house ambassadors and delegates representing their respective nations. It has for its crowning motif the gigantic Tower of Progress, which rises to the height of 1,000 feet or more. On the summit of this tower will be installed a wireless telegraphy plant and on the lower floor of its colossal base will be found a world printing press.

"The tower rises in the midst of a circular space set apart for international congress buildings for medicine, surgery, hygiene, law and criminology electricity and invention, agriculture and transportation, all of which are provided with halls, libraries, museums, and accessory offices To the northeast is the International Hall of Justice and to the southwest the Temple of Re-Completing the conception ligions stand an international bank or clearing house and a world reference library, while in gardens near by are found the international institutes of higher learning. The art center is connected with the physical culture by means of gardens devoted to horticulture, natutal history, zoology and botany. An imposing Temple of Art, forming the chief monument of this center, has been planned with spacious halls and galleries for sculpture and painting, surrounding a vast auditorium. The physical center is intended to facilitate a world reunion of athleticism and to promote the scientific development of the human form in all nations. A vast is a large natatorium, gymnasia foi men and women, and open fields and athletic quadrangles for international expositions and contests."

The estimated cost of creating such a city, according to the author of the plan, would not be over \$100,000,000, a sum that would not severely tax the resources of the governments of the World if equitably distributed The International Committee of the organization is to determine the site and location of the city at its meeting next Numerous places have mentioned, such as the Dutch Coast near The Hagne, the Riviera, near Connes, Turvueren, near Brussels; St Germain on Lave, near Paris; the Marmora coast near Constantinople, the New Jersey coast, near Lakewood, the Isthums of Panama, and recently the Island of Cuba. Many leaders in art, senence, education and world politics in the various countries of the civilized globe are taking an active interest in the movement and the meeting of the International Committee next year will create a world-wide interest.

F. W. Schaer Opens Demonstrating Rooms

Space in the Santa Marina Bullding Open to Public and Daily Demonstrations are Made.

F. W. Schaer Co, has opened demonstrating offices at 112 Market Street. San Francisco, representing the Excello Mf. Co. Chicago, manufacturers of vacuum cleaning systems, Itaake Mfg. Co. Chicago, manufacturers of sus unstanteerurers of water heaters, o W. Roberts Mg. Co. Chicago, manufacturers of electric washing and wringing machines and the Eclipse Stove Co. Mansfield, Ohio, manufacturers of gas stoves and ranges.

The Excello vacuum cleaning system is a modernized process. The separation of dust, dirt and bacteria from the air leing absolutely perfect, allowing the use of any standard exhauster with reciprocating or positive blower type The machine also furnishes compressed when wanted and empties automatically into the sewer. This last named feature does away with the unsanitary process of emptying the dirt, dust and bacteria by hand. The Evcello system is a new process of cleaning and sanctioned by the leading architects in Chicago and New York.

The line of gas staves and ranges is the most modern and complete on the market and these goods are available to large buyers as well as small, at a very nominal cost.

The safety leater, which is an instantaneous gas heater, is unfomatic and sane in every respect It is worked on the process of most heaters, but maintains many advantages over its competitors, the feature is the guaranteeing of absolute safety against explosions and asphysitions.

The washing and wringing machine is very simple and fool proof, being run by a 14-h. p. motor and equipped with a solid rubber wringer and trays. It is most modern in every respect.

Messes, F. W. Schaer Co. malintain a complete demonstrating. Inne at their complete demonstrating line at their sales offices in the Santa Marina Buildies offices in the Santa Marina Buildies and would be phased to demonstrate to the public any of their machines. They are also in a position to submit the lowest prices on all goods.

WORK IN THE BUBEAU OF ARCHI-TECTURE OF THE BOARD OF PUBLIC WORKS,

Full sized details are being prepared as the work progresses on the following buildings: Polytechnic High School, Glen Park School, Edison School, Columbus School, Harbor Police Station, Relief Home Chapel, English House No. 48, and the Washington Irving School,

The following is a brief report on work being carried on at the present time:

Marshall School-Drawings for pro-

posed auditorium completed and contracts awarded.

Auxiliary Fire Alarm Station-Construction work now progressing.

City and County Jail—Plans and specifications for the completion of the morgue to be located in this building, are entirely completed and construction is under way. Buts will be called four on remaining portion at an early date,

Polytechnic High School—Specifications being prepared for metal furring and lathing. Plans and specifications being revised for electrical work.

Oriental School-Contracts awarded and construction under way.

Washington Irving School - Contracts awarded and work progressing rapidly.

Engine House No. 12—Plans and specifications completed, contracts awarded; work will begin at once.

Cooper School-Plans and specifications completed; bids received and contracts awarded.

San Francisco Hospital—Contracts for yard work and lighting fixtures awarded; screen bids received and contract awarded.

Civic Center—Plans progressing rapidly for the improvement of public square and general Civic Center scheme.

Municipal Car Barn—Designs prepared for Municipal Car Barn at 17th street, between Mariposa and York streets, and delivered to Engineer's Department.

CONSTRUCTION WORK ABROAD.

CHINA.

[Consul General George E Anderson, Hongkong.]

Ichang Wenbsch Billyay.

An engineer engaged in survey work on the section of the Szechwan-hankow Railway from Ichang to Wanhseh—known as the American section—reports that the location survey of that line has been completed to Kweichow, representing about two-fiths of the entire line. The present line is an entirely new survey which follows the Yangtze River closely instead of running back some distance in the interior from the river.

The new survey from Ichang to Kweichow is 53 miles in length as compared with about 99 miles of line represented by the old survey once adopted by the old Szechwan Railway The new survey, however, contemplates running two long tunnelsone 17,000 feet-and an enormous amount of bridging. The grade by the new survey is comparatively slight, the maximum being 112 per cent. The key to the entire new route is the long tunnel referred to which would be located about 11 miles from Ichang. The plans and estimates of this portion of the line are substantially complete. and a recognizance survey of the unsurveyed portion of the entire line is being made. It is anticipated that construction work will suon commence

In this connection attention is called to the fact that the chief engineer of the several sections of this Hankow system agreed several months ago that in all contracts for the construction of bridges or similar seel structures bids will be received on all the sections from firms of any nationality, basing their decision upon the general contract which allows any manufacturer to replace a standard section of any such structure as called

for in designs with one of its own standards, provided it is at least as large or larger, no allowance in price being made to any such increase in size or weight. This privilege is of value where specifications are drawn upon one standard, like the metric system, and bals are submitted on another

as in fect and inches or in pounds or tons.

Reclustion and Harbor Work at Hong-kone.

The reclamation of a large amount of marine lad and the lad and the deepening of a considerable portion of them harbor of Hongkong so us to accomb harbor of Hongkong so us to accomb date the largest size vessels, which have used have used lifetily at times, are in process of final arrangement in the colony.

The reclamation scheme involves filling in that area of Hongkong Harher inclosed within a line drawn from East Point, a well-known promontory extending from the east side of the island of Hongkong into the harbor at a point some distance within the princinal entrance known as "Yy-ee-mun." to a point opposite Arsenal Street. about one mile distant to the north and toward the principal portions of toe city of Victoria. The area reclaimed will average about a fourth of a mile in width. The earth and material for filling will come largely from the level ing of Morrison Hill and East Point Hill the former an elevation of about 196 feet in height and about 900 feet long and 450 feet wide on an average and the latter a similar elevation some what smaller. The water in the marine area to be rectained ranges as deen a two fathoms in places but usually runs from a maximum of 112 fathous to the shore.

Greater Facilities Veeded.

Deenening Hongkong barbor been receiving the attention of colonial authorities as well as the shipping interests of the colony for some time. and it is thought that some definite action in this line will be taken short ly. While there is an abundance of water for ordinary vessels coming into the harbor, especially since the policy of the port always has been to furnish accommodations for vessels coming through the Suez Canal as the standard of what is required in the port, severa of the trans-pacific vessels have been in difficulties at certain places in the harbor when fully loaded. It therefore been felt for some time by shipping people that something would have to be done. For a time it was proposed to deepen the port and construct new wharves in connection with reclamation scheme above scribed, but it has been decided that deep water is too far distant from the shore in the locality involved to make such a plan feasible, for the present time at least.

MUNICIPAL PAPER WORKS AT DENVER.

Employment has been given to a great many transient men and some women in the new industry of baling the waste paper of the city, three carbods of which have been recently sold at a fair price. Paper is collected from the large stores and from receiving cans on the street corners, is sorted, balloud and shipped to market at about the rate of a carboid a month. While mortabling framenal benefit to the city, this method of handling the paper serves the double currose of getting

rd of the waste paper without cost and at the same time furnishing work to jobless men. The revenue from this paper industry now supports the families of the men employed at it and in addition adds a little to the general fund of the department,—Exchange.

TO STUDY ROAD CONDITIONS IN 100 COUNTIES,

Department of Agriculture, in Cooperation With States to Seek Data Looking Toward Standardized - System of Local Road Management.

WASHINGTON, D. C., June 11, 1911 betalled studies of local road building systems in 100 counties are now being carried on by the Department of Agriculture in co-operation with the State bighways departments and local road authorities.

The purpose of this study is to discover the points of excellence and defects in existing local methods of building and maintaining roads which will aid the State authorities to put local road management on a systematized basis. The co-operating State authorities have been asked to designate counties that present typical and exceptional features as to topography. character of road materials, methods of construction and maintenance, administrative organization, methods of road financing, and traffic conditions. From these lists 100 counties will be selected, and in these counties the Division of Road Economics will make intensive studies.

This investigation is prompted by the fact that there is at present very little knowledge as to the most effective and economical methods by which a county can develop its roads. At present the methods of financing local road improvements vary from calling on farmers for a certain number of days labor in fleu of a road tax, or the use of county prisoners in road construction, to bond issues or maintenunce of roads from dram-shop license funds.

The Department will study all of these systems with the view to determining what system or combination of systems works best in actual practice.

There is, moreover, at present no standard system of keeping accounts for road building and maintenance, and as a result, while some counties know to a penny the purpose for which money was spent, others have no defiite check or reporting system. Among carlous counties with the same conditions, cost of excavation or other labor is anything but uniform, and many counties, because of the absence of knowledge, fail to use local definite and cheap materials and construct roads which are unnecessarily expensive for their purpose, or which will Wear out before the bond issues are redeemed. The investigation will include a careful study of the use of convict labor in road construction.

In connection with the scientific study, the Department's highway engineers will advise freely with local officials as to improvements, and tous give each county visited the advantage of direct co-operation, engineering supervision and assistance.

These investigations, it is believed will yield important economic data bearing especially on the benefits and burdens of road improvement and - owing the extent to which financial outliev under given typical conditions is justifiable.

The heads of State highway departments are mainfesting great interest told are cooperating cordially in this work. These data when obtained will be pull-shed and thus made accessible to all county and state mod officials.

BRANCHING OUT.

The Foster-Vogt Co., Sharon Bldg., Concrete Contractors, have lately bramehod out into General Contracting and lave undertaken some very large works, amongst which we note that they are now constructing the Oregon and the Indiana State Buildings at the Exposition.

The "Builder" bespeaks for Foster-Vogt Co, the fivors of the architects and owners when needing the services of a General Contractor.

TROY ORE FOR 200 YEARS.

There is still a considerable amount of from one in the ground, as shound by a report on the world's resources presented at the international Geological Congress at Stockholm. It was estimated that the total actual supply of iron ore existing in deposits that can be worked at an economic profit amounts to 22,46,000,000 long tons, representing 10,192,000,000 tons of iron.

This total would supply the requirements of the world for considerably less than two centuries, even were the present rate of output not exceeded on the average. However, the potential resources of the world not yet developed are estimated to amount to 122,377,000,000 tons of orc. The output of iron ore in 1912 is estimated at 116,000,000 tons for the ten principal countries.

TWO BIG DAMS ON MILE.

Two irrigation dams will be built by the Exyptian government, one on the Eue Nile and the other on the White Nile. The structures, It is reported, will be larger than the Assuandam, and the estimated cost ranges from \$15.00,000 to \$17.500,000.

ORDER PLACED FOR OIL PIPE LINE

An order has been placed for the continuous pipe which will be installed between Martinez and Coalinga for the purpose of transporting oil from the southern city to Martinez. The actual cost of the pipe including the installation will be in excess of \$1.000,000 pounds and will require 750 flat cars to bring it to California from Youngstown, Ohio, where it is to be made.

The pipe will not be shipped all at once, but will be sent out in sections as it is completed. The railroad of-ficials state that this shipment will be sent open the way for future large shipments. The order was for 115 miles of 15 miles of 8 line, pipe and for 57 miles of ten-inch—Richmond Ind.

SURVEY STATIONS SHOT UPON FACE OF CLIFF.

A great deal of ingenuity was required in making the survey for the new state highway across the face of Storm King Mountain, a steep promontory that juts out to the Hudson

River at a point a short distance up the river from West Point, N. Y. In many instances it was necessary to lower men and instruments over the cliffs with ropes in order to make the required cross sections. But for a distance of about 100 feet it was found impossible to use even this strenuous method, as the surrounding rock formutions were inaccessible and the engineers adopted a novel method for getting the measurements across the face of this part of the cliff. A field gun was obtained from the West Point Military Academy This was loaded and fired at points selected on the face of the cliff, the projectiles used being cans of paint. The cans broke when they hit the cliff and the paint formed distinct targets on which the engineers could train their instruments. location and elevation of each target were then found by triangulation and the taking of vertical angles. highway is to take the place of the present road over the mountain, which reaches a height of 1,340 feet and is a long and somewhat dangerous route both for horses and automobiles. The engineers estimate that the four miles of highway past Storm King Mountain cost \$'00,000 a mile .- Popular

TENEMENT HOUSES ERECTED IN 1913.

The Records of the Bullding Department of the Board of Public Works show the following relative to the construction of tenement houses for the year 1913:

Number of tenement houses erected in 1913, 217.

Number of houses for three families not controlled by the State Tenement House Law, 60. Number of houses for four families not controlled by the State Tenement House Law, 30. Houses erected for two families, 292.

Permits for tenement houses creeted from January 1st to May 1st, 1914 show that 64 have been Issued. There were also eight holging houses and eleven hotels elected under the Tenement House Law from January 1st to May 1st, 1914.

LARGE TREES DISAPPEARING.

The giant forest monarchs of British Columbia are by far too valuable to be allowed to live as curlosities for their majestic size and beauty. Still their race is by no means extinct The regretable thing about them is that since they are the production of centries, during which the soil was not needed for any other purpose, it is united by the truth of the purpose of the propose of the purpose of equal size.

ARTIFICIAL RUBBER A BY-PRODUCT OF STEEL MAKING,

[Commercial Agent Erwin W Thomp-

At a recent meeting of the Iron and steel Institute in London, the president read a paper on by-products in steel manufacture. He discussed the ntilization of blast furnace gases for operating gas engines and for illumination and heating, and the later developments in making nitric acid from these gases, and also the manufacture of bricks and cement from slags. All these matters have been under disPhone Kearny 3864

cussion for a number of years, but a new idea was presented at this meeting tooking toward the synthetic production of India rubber from coke owen gases. The president's words were: "It was being sought to obtain from it the hydrocarbons, the derivatives of which were found in india rubber, and experiments that had been made permitted the foreshadowing of the mainfacture of artificial rubber."

FOREST NOTES.

Approximately 750 acres on the Oregon national forest were planted with young trees this spring.

On the Deerlodge national forest in Montana one lookout station has the record of reporting accurately, by distance and direction, a fire that was sixty miles away.

Nearly 3 million young trees are being set out this spring on the national forests of northern Idaho and Montana. On the St. Joe national forest in Idaho three thousand acres will be planted.

Ranchers within and adjacent to the slerra national forest California, have formed a co-operative association for the prevention of forest fires. They need to use fire in clearing land for farming, and will do it on a community lasts, with all members present to prevent the fires' spread.

The Canal Toils Repeal Bill has passed the Senate by a vote of 50 to 55 and William Randolph Hearst is again and William Randolph Hearst is again and the minority. This measure has taken on some peculiar phases. The men who have been consistently with the people have stood with the President in favor of the repeal. While Hearst and Underwood and the reactionaries generally have been howling their heads off because of the surrender to the railroads. After all it will perhaps be found to be of minor importance, as the President says.

That rubber tires have more endurance than steel rims is one of the facts developed by recent tests made a tire manufacturer. The test method was to put a tire on a steel rim and force air into the tile till something gave way. The rims were not mounted and reinforced by the wheels. The tests were severe Some tires were inflated to four hundred pounds to the square luch. Not a single tire gave away, but the rims collapsed and in some cases were twisted into actual 'figure eights." One tire was tested fourteen times, breaking rim after rim,

My Experience With The Law.

By Simon T. Stern Of the New York City Bar,

Reprinted from The Docket

I am a plumber; that is, I was a plumber, with a tiny shop on the outskirts of the city, until the law stepped in and took a hand in my affairs. My establishment was not especially impressive. I had about a thousand dollars worth of stock and five lundred dollars in the bank—the savings of ten years. My name was over, the door and I owed no man a dollar.

For a decade I had worked at my trade; first as apprentice, afterwards as journeyman, and at last I graduated into the ranks of master plumbers as my own boss: "John Williams. Plumber and Gas-Fitter. Jobbing a Specialty." How proud my young wife was when the shingle was first flung forth to the gaze of passers-by!

One cold winter's morning, Jos Murtagh crossel the threshold of my shop, I had known him casually for some years as a sort of combination builder and politician. I had heard he was about to build a beautiful residence not ten blocks from my shop. Joe passed for the wealthiest citizen in our section of the city. He ran an automobile, entertained lavishly, and his wife and two grown daughters were always dressed in the best of style.

"Say, John," he greeted me bluntly,
"I want you to do the plumbing in our new home. The family will live there,
We're going to have the best of everything and I've picked you to do my
plumbing," Carelessly he tossed a set
of blue prints on my desk and invited
me to submit an estimate.

Up to that time I had been doing repair work and odd jobs. For some time I had been thinking of taking on contracts—as soon as my resources would permit. That time had now arrived, apparently. As far as I knew him, Joe Murtagh was a responsible citizen, and I felt pleased at the distinction of starting my real career with his house.

Several days later I wrote that I could furnish and install his plumbing plant for fifteen hundred dollars. I had figured close because I wanted his work. My labor and the wages of the men on the job would cost me at least five hundred and fifty dollars. The material necessary footed up seven hundred and fifty dollars more. That left two hundred dollars for my profit after I was through paying my men and paying my wholesale house for the materials.

When see got the figure he told me I was too high. He had another plumber, he said, who was willing to do it for fifty dollars less; but he would close with me if I reduced my bid by that sum. It cut my profit twenty-five per cent, and I said I could not afford to do it. Finally we compromised at fourteen hundred and seventy-five dollars. The irony of II in the beginning we were haggling over twenty-five dollars!

The contract was signed at an architect's office. It was a lengthy document, with lots of printed matter. I laughed, and asked Murtagh why ne couldn't give two lines on a slip of paper saying how much he would nay

and I would stan it, saying I would do
the work for that sum. He insisted
that that wasn't bong the thing in
good legal stane, above all things in
the building game I must learn to do
things according to law. So we signed
the paper, most of which was Greek to

Every other line it called Joe the party of the first part and me the party of the second part. I was the party of the second part, all right! In it, Joe agreed to pay me five hundred dollars when I had the pipes in, and the rest when I was finished. There was one clause in It that at the time I scarcely noticed. Each time I wanted my payment, I must go to Joe's architect and get a certificate from him that I was entitled to it. When I called Joe's attention to the hundreds of words, he said it was all red tape. It was merely a form. He used it in all his build-"You do ing. So did everyhody else. your job, I pay. So hurry along, my Order your supplies from the wholesale house and get to work."

It was the first time I had run into debt to my supply people. But I had always paid in cash, and they were willing to extend a line of credit on the strength of the contract when I showed it to them. The first part of the work—roughing out, we call it—I knew I could finish in two weeks. I arreed to pay them three hundred out of my first payment and the rest when Joe settled up.

The Job went smoothly. I roughed out the house and went to Joe's office to collect. He handed me a chock with a smile, saying: "You see, I didn't even ask for that architect's certificate."

"Why should you?" was my rejoinder. "The work is honest. That architect of yours hasn't been near the building since I started."

"I wanted him only for the plans anyway," Joe told me. "When it comes to details, a practical contractor like yourself knows more than a thousand architects"

Three weeks later the building was ready for the fixtures. I ordered up the bath tubs and lavatories and fittings from my supply people and finished up. When I turned on the water, I was ready for my nine hundred and seventy-five dollars. I went down town and asked Joe for it.

This time there was no check for me. Instead he told me to go down to his architect and get the certificate. But I Insleted that I must have something on account. I had used up all my ready cash paying my laborers, and my supply house had demanded their payment now that I was through. But Joe wouldn't jisten. He inslited on the letter of the contract, and I went to the architect's.

The architect's clerk told me that his boss was off on a fishing trip down Frankly, I didn't helieve a South. word of it. The very next day I went back and caught him-caught him unashamed, smiling rather at his cleverness in almost putting me off. He professed extreme busyness and promised to inspect the work as soon as could. For three weeks I got no satisfaction. In the meantime, you may be sure, my business was suffering. cash was all gone and my supply people were growing insistent. But that architect took his time about it, and Joe wouldn't give me a cent until I got that certificate.

In answer to my persistence, the architect mailly went over the 10b, architect mailly went over the 10b, and found about a bundred faults' mythical, most of them, and the rest trivial beyond measure; but he insisted that I correct them. What was I to do; I correct ted every objection he made—at the expense of half my profit. Profit? Already I saw disaster: I would have been only too happy to get enough for my supply people and to replenish my actual outlay for labor.

I appealed to Joe. I told blm my supply house had threatened to sue, "Let 'em sue," he told me. "For a few dollars you can get some lawyer to show the case off until they're tired. When they take a judament, turn your stuff over to your wife and let 'em fight. They can't do anything. Before you get through, they'll be glad to settle for ball."

"You don't owe noting until the law says so Make them prove it. Make tem bring every driver to court and swear the day, hour, and minute when no delivered stuff to you. Make 'em prove every valve. That's the law. The law is, if they can't prove it, you don't owe it. If a feller gets funny with me, I tell him to sne. Why don't you see me?" he added with a smile.

That's how I came into the sheltering arms of the law. I visited a lawyer and told him my story. He advised me to file a mechanic's lien, and I wanted to know if that would bring me my money.

"It will, if they havn't put mort-

"Do you mean to say the law permits mortgages to come ahead of my lien?"

He did. He also said there might be arrears of taxes and water charges and other things, and said we ought to search the title. He made the search and I made my first discovery. Joe Murtagh did not even own the property! It belonged to a building corporation. Joe's wife was the president and a director; and Joe's two daugaters were the other directors. We The first one found two mortgages. was for five thousand dollars, and was evidently straight. It was given to a bank for savings.

But the second mortgage didn't look right to me. It had been given to a man by the name of Jack Ripley, of Someplace, South Carolina. It was for six thousand dollars—eleven thousand dollars altogether; more than the whole house was worth.

My lawyer explained that the entire transaction looked dishonest, but there was nothing unusual about It. In order to protect himself from his creditors, a builder often formed a family corporation and gave a friendly mortgage to a friendly relative. I thought of Joe Murtagh when my liwyer add-That corporation and that morted: gage are created by law. They may be fake, but the law doesn't treat them as fake until you prove it. Do you know why they gave that mortgage to somehody in South Carelina? That means that you will be put to considerable expense to serve him with papers. You made your contract with Joe Murtagh. You can see him and get a judgment.

"What do I want with a judgment uness it's good? I want my money that's all. It's coming to me. That house belongs to Joe Murtagh as much so this right hand belongs to me. He is going of the int. The out in the tell me the law permits in the first place of parel making a continuous with his own family as directors, and keeping out of my manes?

"It's done every day for lifty dollars, it's up to you to prove that incorporation feardment. Then your hen comes

"Back of eleven thousand dollars' worth of mortgages, six thousand dollars of which are one fake?"

"No, the law will help you there You can set that mortgage aside. But you must serve papers on Jack Ripley in South Carolina"

"That's easy. We find out where he lives, and send a copy of the papers to somehody by mail, and let them hand the papers to Jack Ripley, fraudulent mortgagee"

"The law won't permit it in be dine that way. That's the reason they got that mortgage to a man who does not their inversion. We would state You cannot be and the papers to anyhody out of them State. You must advertise your summors in a newspaper for six weeks—so the law provides."

"What'll that cost?"

"ob, it runs from fifty dollars to a bundred dollars-cash. Legal advertising is one of the richest kinds of political graft. A judge selects the newspapers, and the prevailing party selects the judge. There are all kinds of papers with a circulation of four hundred copies which exist only for the publication of summonses and legal notices-all politics Jack Ripley Is very apt to read a notice published in the Fire Chief's Fireside Companion of East Broadway, New York, Isn't he' But if the judge ploks that paper, in it goes. Legal notices are never read -they're just printed and paid for. You'll have to publish in two papersabout fifty dollars each."

That was a facer. "Why," I asked, "can't I co up to a policeman and just tell him to arrest the man who defrauded me? Joe Muriagh told me howned that house. He signed the contract as if he were the owner. Why must I serve Jack Ripey in South Carolina, when the man who did all the wrong is right here? He formed that fake corporation. He drew that mortgage. He defrauded me."

"You can't," my lawyer assured me, "It lan't that kind of fraud. The law distinguishes. The very prosale man who steals a loaf of bread goes to the workhouse—that's the kind of fraud the law chastises summarily. But the other thing is different. It is what the law of it is different. It is what the law calls a civil fraud. You sue him for fraud in the civil court. You can get a civil order of arrest."

"What's the difference, as long as he goes to jail?"

"He deen't go to jall," the lawyer continued "Technically he goes there. Actually he hands Mr. Sheriff a bond. The bond goes to jall. Murtagh simply squarantees that he will honor you by appearing in court and listening to you when the case is tried. That's all he mest do. If he is there in court, the bond is satisfied."

"I see He doesn't go to jail until the case is won and we get a fraud judkment against hlm. Then I get him arrested eh?"

"Yes civilly arrested"

That "civilly arrested" began to get on my nerves. The entire proceeding seemed to be one mass of civility. I inquired whether Joe Murtagh would even then see the inside of a cell "Vertainfy not wis the response. In gaves a new bond—that's all. All be must do is to stay in the jail limits for six months."

"Then he is in jail, after all."

"Technically, yes But his cell is commolious enough. The jail limitmeans merely be must stay within the county of New York for six months the can wander abroad as long as he stays in New York. In other words for six months he is denied the privilege of journeying to Europe or the North Pole After that he goes wherever he pleases. The bond has been satisfied."

There was only one thing to do, after all. We filed tat lien, We filed that lien. We filed it against the family corporation and against Jack Ripley of South Carolina. We began the suit, when we found that Jack was Mrs. Murtagh's own brother. It cost me eighty-four dollars to see my summons published in the Fire Chief's Piresde Companion, and it took us a week to get a copy of that whelly circulated sheet. If Jack Ripley ever saw that notice, he gave no sign.

The law taught me something now every day. It wasn't three weeks before the law took my lien away from me Joe Murtagh filed another bond I learned that he could wipe my lien off the property if he filed a bond with two sureties. The same judge that two sureties the Fire Chief's paper approved that bond. He couldn't help limself. The law compelled him to approve it as long as they swere they owned real estate.

Joe produced a district leader and a real estate speculator, and they swore they owned three flats. In vain my lawyer called the attention of the judge to the fact that there were more mortrages on the three flats than there were on the Murtagh house. The law wiped off my lien and gave me a bond with two bondsmen who were perfect strangers to me—and in spite of my objection.

Did the law help me to collect that bond? This is what happened. The case hung fire for two years. By the case hung fire for two years. By the end of that time the Murtagh house had been sold in the open market and Jack Ripley had satisfied his mortage. The money for the house went to the corporation, and Mrs. Murtagh, as treasurer, signed a check and gavent of the companion of the distribution of the money—all of them. He got the money—all of the simply produced documents and his women folks signed them wherever he told them to. And yet the law has it that Joe Murtagh had nothing to do with that incorporation nothing to do with that incorporation.

We got a judgment against those bondsmen. Did they own real establishments. Did they own real estable by the time we got the judgment? Not they. They had transferred their property the day after they source they womed it? My lawyer tried to get them punished, but the law stepped in and said the transaction was all right as long as they owned that property the day they swore they owned it. That very afternoon they could give it may and they could not be punished,

Of course I could bring a new action against the people—this time in Illinois—to whom they had transferred it. And I could get more summonses published in that political paper as long as I had fifty dollars with which pay. And maybe after another year

of so I could get a new judgment a a.n.t them. Apparently the law did all it could for me when it forced me to give up my good lien and accept a rotten bond.

Of course the law isn't always so impotent. My wholesale house fared better. They took a judgment against me for what I owel them. And because I was honest, and refused to form a family corporation, or make fraudulent transfers. Mr. Sheriff came along and cleaned me out. He took experitions I possessed—my shop, my stok, my bank account. All he left me was a set of plumber's tools, which the law declared exempt.

I am making a living with them over since as a journeyman. Not long ago I worked as a laborer on one of our large apartment hotels being built by the Joseph Unringh Realty Compins, Mrs. Murtagh is president; she is still signing papers wherever her busband puts his finger. Miss Murtagh is secretary. Miss Vivie Murtagh is treasurer. Poor old Joe isn't even a stockholder. But the family corporation keeps him supplied with funds sufficient to run a stable of automobiles and to wear fine clothes and live like a prince. He is a technical pauper, while I am a real one. We have one thing in common—it was the law that made both of us.

New Improvements In Mulvaney Beds.

Economy of Space Marks One of Many New Points of Wall Bed Now Attracting Much Attention.

By referring to the advertising columns of this issue, our readers will find the announcement of a new wall bed, the patent of H. C. Mulvaney, whose name it bears.

This bed has several new improvements in addition to the conveniences which have made the wall bed a necessary feature of almost every apartment building.

By specifying the Mulvaney wall bed, Architects can save from eight to ten inches of the space ordinarily required for wall beds, which, in a building of limited size is an important consideration. For buildings already complexed, or where it is not desirable to frame in a reverse, the Mulvaney Wall Bed is made in cubinet style built to line with door casing, etc.

Another important feature of the Mulvaney Wall Bed is a ventilating system which insures the circulation of fresh air at all times.

The II C. Mulyaney Wall Bed embodies an absolutely new principle in its construction, there being no complicated parts to get out of order, making it an ideal bed; specially adapted for sleeping norches, residence and in fact, any place where a bed is required.

The company also manufactures a roll under or also ppearing bed which fills a long felt want. Mr. Mulvaney has established offices in the Underwood Building, 525 Market Street, with courteous attendants prepared to demonstrate the desirable features of this bed at all times.

Owners, Architects and Contractors are cordially invited to inspect this bed.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Editorial Comment.

Building operations for the month of May went along with about an even pace with last year. Of something like 75 cities making reports to the American Contractor, Chicago, the total amount of building permits amount to practically the same thing as that of May, 1913. Particulars are

		icurats are

Total\$71,467,707 \$74,157,152 It will be seen that New York and Philadelphia gained while Chicago lost. In the main the other cities registered about an even break so that the total of 74 million is almost identical for the two years.

Judge Dunn is reported to have said that the trial of cases has degenerated into a game. He refers particularly to the criminal cases in which he states that the attorney for the defense .s one player, the District Attorney ...e other and the Judge is the umpire. In case it result in conviction and an appeal is taken, it is decided not upon the guilt or innocence of the accused, but upon whether or not one of the rules of the game has been violated.

What the judge says of the criminal law is equally applicable to civil cases, And these long delays and endless arguments are being put an end to by the commissions that have been established with judicial powers.

The Workman's Compensation Act is one of the acts that has established a commission that does away with delay in personal injury cases.

INSIDE BUNGALOW.

The Pacific Building Materials Company has built and tastefully furnished a complete California bungalow inside their office at 523 Market Street, for the purpose of demonstrating the uses of the different Building Materials and Equipment they handle.

This inside bungalow besides being extremely novel, is very interesting to a prospective home buildier, for a good many ideas for decoration and furnishing a modern home are shown to good advantage. There is not a detail either in construction or furnishing, that has been overlooked.

The Pacific Building Materials Company extends a cordial invitation to our readers to inspect this bungalow at any time. We feel that you would be interested in seeing this attractive and useful demonstration and it is with much pleasure that we extend this in-

The Use Of Asphaltic Road Oil.

By W. N. Frickstad, Assistant City Engineer of Oakland, Cal.

From Pacific Municipalities

Before the Third meeting of the Bay Cities Branch of the League of Califorma Municipalities at San Jose Cal. May 9, 1914.

The man who discovered that asphaltic oil is useful in road building unknowingly started a series considerable part of the time of trustees, engineers and other municipal officials for the past several years, particularly the last five The use of his product has been called the greatest advance in road building since the days of John McAdam a triumph of American inventive genius and a wonderful saver of the taxpayer's money On the other been set down as merely another luxury entering into the high cost of living, or by others of a different mental attitude, called a pitiful substitute for something better and more permanent. It is not my purpose to engage vigorously on either side of the controversy. Probably there is truth in all of these statements, and certainly under some circumstances atl are wrong. It is rather my purpose to point out the circumstances under which oil is useful, at least as we have developed the subject in the Unkland Street Department, to describe briefly our methods of using it and to tell something of the cost to us

You have undoubtedly beard that a street should be designed according to the traffic that it will carry. considerations enter but undoubtedly the amount and kind of traffic is an important factor. A street that is likely to carry less than a bundred vehicles per day can be payed in a very different manner than one that will carry three to six thousand. Also the character of the vehicles is important. In November, 1908, five and one-half years ago, the best information at hand indicates that automobile traffic in Dayland was between 10% and 12% of the total.-Not enough to be a serious facfor except on a few main highways especially useful to them. A year ago . count of 130 000 vehicles covering 25 points slowed 53 69 of the total to be automobiles of various kinds, the stations ranging from 7% to 72% A similar count this year shows nearly soc Ohyjonsly there has as an average been a great change in the kind of traffic in the last few years.

However, the traffic is not the sole consideration in selecting a pavement In deference to our optimistic friends the real estate operator who wants a pavement, but wants it thin, and to the pessimistic protestant who appears before the Board of Council as evidence that he does not want any pavement at all, but if he must have it wants it cheap, I will say that cost is an important item. On the other hand, certain things must be secured even on our streets of lightest traffic. The average residence street is essentially part of the front yard. It should be of decent appearance and reasonably clean. The children will surely use it for a playground, and it should not be a series of bog holes in winter and the source of a fog of dust in summer. These latter considerations alone cause the demand for many miles of paving annually. Incidentally, the individual property owner who has an automobile or a horse wants to reach his home conveniently, the grocer, butcher and expressman find good streets necessary in the residence district, and occasionally every street will be traversed by the heaviest truck in town with a load of lumber, stone or other huilding material.

From the foregoing remarks it is dear that any pavement, to be useful, must be durable in proportion to the expected traffic, clean or easily cleaned, reasonably noiseless, pleasing in appearance, low in tractive resistance, offer a good foothold, be capable of sustaining the heaviest loads and be easily repaired. Certain minimum requirements must be exacted regardless of the amount and kind of traffic. Under former conditions plain macadam served the purpose very well on streets of moderate travel, and was extensively used under medium and even heavy traffic. In recent years there has been a growing demand for cleaner streets, and macadam was nearly always dusty in summer and muddy in Then came the automobile, propelled by its own wheels at high speed and plain macadam promptly became out of date.

The problem of finding a substitute for macadam arose in Oakland five or six years ago. We did not care to adopt a standard asphalt pavement at a cost double or treble that of macadam. All of the patented pavements that came into vogue at about that time seemed defective in some vital point or were too expensive. After some experimenting, which has been in progress to some extent ever since. we adopted the use of asphaltic oil to modernize our macadam, It is now our standard for streets of light and medium traffic So far as can be known at the present time it fulfills. to a reasonable degree, all of the requirements set forth above, excepting that it is distinctly not easily repaired, especially over refilled trenches. 13 (1) tals is true of any type of pavement built without an adequate concrete hase, and is one of the penalties atticked to building a low priced pave-

precise amount of traffic that The should har the use of oil macadam in favor of something better is difficult to Tentatively, perhaps 1,000 vehicles per day on a roadway thirty-five or forty feet wide might be suggested. although if most of the traffic be ordinary automobiles or light horsedrawn vehicles, this might be too conservative. Time alone, combined with careful traffic records will answer this question. A traffic of 1,000 vehicles per day is not found on many streets in a small city, and even in a large city the mileage is limited. So if experience proves that this limit is contect, even if other pavements prove to be satisfactory and economical, the field of usefulness for oil magadam is extremely broad.

Another field in which asphaltic oil has been useful to us began primarlly as a maintenance operation and secondarily a betterment When ahandoned the construction of plain macadam in 1910 we had about 273 miles of that class of streets. It was obviously impossible to order their immediate reconstruction, most of them being in good or fair condition automobiles, however, were beginning their deadly work. We were forced to find some means of protecting these roadways. Surface oiling, which had already been successful in other places, was adopted as the most economical protection in sight, promising also to reduce the cost of maintenance by eliminating the sprinkling and decreasing the cost of cleaning. A beginning was made in 1910 and 1911 and the work prosecuted vigorously since. date we have surface oiled about 65 miles of street Reconstruction has further reduced the length of plain macadam to about 193 miles, of which fully 100 miles will be oiled as rapidly as funds permit. The others are too old to be oiled economically

so much in general as to the field of usefulness of road oil. Many methods have been developed in various cities, but to make clear upon what we are boasing our faith it might be advisable to continue to limit the discussion to column to limit the discussion. Oaksland practice. I shall onit many details. For further information, if you wish to compare our methods with yours, I invite, you to visit oakland at almost any time between now and October. We will be glad to give any information available and show some of the actual work.

Our work is of four types:

(1) (ill matcolain, which consists of a macodam street into which oil has been worked during the process of construction. The term oil macodam covers a wide range of specifications, but as used in this paper the distinctive feature is a definite penetration oil into the payement to the extent of two or three or more inches.

(2) Surface oiling, which consists of spreading a thin wearing surface of oil and screenings over a completed water-bound macadam street.

(3) Surface oiling on a concrete base, somewhat after the manner of the so-called dollar-way pavement.

(4) Oil used in patching or repair work.

We are using two types of oil macadam, one being called single course, and the other two course oil macadam. The former is constructed as follows:

After the curbs and gutters have been completed and the subgrade carefully graded and rolled, a layer of stone is spread, varying in depth from eight inches at the center to six inches at the gutters, measured before rolling. This rock is rolled once, then screened and rolled afternately until filled with screenings and the toadway is fairly compact and firm. Then oil is applied at the rate of about seven-eighths gallon to the square yard. Sufficient time is allowed for the oil to sink into the rock, when the street is again screened and rolled. Then about five-eighths of

a gallon of oil per square yard is applied and again the street is screened and rolled

In the main, we have had good suc cess with this pavement because we have insisted on good material and careful workmanship. However. have had some partial failures. The main difficulty is with the fundamental theory of the pavement. When we secure perfect results we have an oilbound wearing surface about three inches thick overlaying another layer of rock three or four inches thick which may or may not be thoroughly compacted, bound or filled with screenings. The base is therefore likely to he weak, especially in spots, and give way under a heavy load Furthermore, certain practical difficulties occur in trying to secure results. If we call sufficiently to pack the base before oiting we are almost certain to seal the top so that the oil will not penetrate; if we leave the top open and porous to absorb the oll, the base may not be compact. The slightest carelessness results in both defects in the same block, Then we find that the details must be varied from day to day according to the weather. Also that the rock from each quarry needs its own treatment, and we used rock from twelve quarries last year. Also the personal equation of the contractors. foremen and inspectors has its influence. Nor does the pavement seem capable of supporting heavy loads in the first years of its life.

Because of these difficulties and the uncertainties involved, we have ceased to issue specifications for single course macadam, which might better be described as an attempt to build a two-course pavement in a single operation. All of our new specifications frankly call for two courses or layers. The essential features are as follows:

After the roadway has been brought to the proper subgrade, and after the curbs and gutters have been constructed, a course of broken stone, known as the base course, having a depth varying uniformly from five inches center of the roadway inches at the gutters, four gutters. measured before rolling, shall be spread on said subgrade. This base course shall then be rolled, etc., as usual for water-bound macadam, Upon the base course shall be spread a course of broken stone, known as the top course, having a uniform depth three inches, measured before rolling. This top course shall then be sprinkled uniformly with oil at the rate of onehalf gallon to the square yard, after which said top course shall be rowed and again sprinkled uniformly with oil at the rate of one-half gallon to the square yard. This oiled surface shall then be thoroughly rolled. enough screenings being spread in light layers on said top course during the rolling to completely fill the voids. After the top course has been so prepared oil shall be sprinkled uniformly over the surface at the rate of one half gallon to the square yard, then covered with screenings and thoroughly rolled.

The stone for the top course must be of a high grade, ranging from one inch to two inches in size, but for the base course may be poorer and coarser.

The two important precautions in building this kind of pavement, aside from good material and workmanship, which we have with us in all construction, are (1) compacting and binding the base course, and (2) oiling the top course uniformly.

This payement is fundamentally sound. It conforms to good theory and practice. It is not new or untried. We let one contract in 1911 and five in 1913, and have observed the success of other municipalities with this kind of construction for some years. We have long believed it to be better than the single course macadam, but have hesitated over the additional expense. It is now clear to us that the additional cost is fully justified by the improvement in quality, and we hope that when the contractors appreciate its comparative simplicity of construction that the difference in price will be reduced

Oil macadam, particularly of the twocourse type, has all of the good qualities of plain macadam, excepting that traction is slightly heavier for horsedrawn vehicles on warm days. On the other hand, automobiles seem to have little effect upon it. Iron tires, espe-cially when heavily loaded, tend to slowly wear the surface, which can be renewed. The surface is clean no dust or dirt being created by the wear The roadway and gutters are kent cleaner than our plain macadam half the expense. The edges at the gutters are not washed out by an occasional winter flood and crossing culverts are seldom blocked by sand. It gives a good foothold for horses and rubber tires, except in wet or extremely cold weather, when it is still less slippery than asphalt. It is practically noiseless. In appearance and fundamental soundness it is comparable with an asphaltic concrete wearing concrete wearing surface laid on a plain macadam base. Which of the two is ultimately better, maintenance, first cost and service all considered, cannot be said at this time, but the oil macadam is certainly the cheaper in first cost.

The second method of using oil, surface oiling, starts off with a sound, hard, reasonably smooth macadam roadway. The street is carefully cleaned and repaired. Oil is then spread upon the street at a rate varying from five-tenths to six-tenths gallons per square yard. This oil is covered with clean screenings and rolled. A few weeks of moderately warm weather, together with an ordinary amount of traffic, will produce a smooth asphaltie surface.

This operation is easily accomplished by skilled workmen. But we have found-and the case is probably the same with many of you-that certain things are necessary for success. The first of these is a good street on which to work, for every soft spot, ridge or depression will show in exaggerated form shortly after oiling. Another is skilled workmen, especially the foreman, operator of the oil wagon and teamster. Another is thoroughly cleaning of the street, for the oil will not adhere when insulated from the rock by a layer of dust. Another is clean, hard screening. Another is suitable We are using 90 per cent refined oil, but other grades have given success. Without going into a technical discussion of olls, it may be said that oil with high adhesive qualities is nec essary for this work as well as for any other method of using road oil. A final precaution is to limit the amount of oil, Excess oil is expensive in itself,

requires extra screenings in proportion, and results in a wavy road

Indications are that the oil surface will last from three to five or six years. Few of our streets oiled four years ago slow any necessity of a re-oiling, although some earry a fair traffic. This kind of street has all the merits of oil macadam as to appearance and cleantiness, but it is more affected by horse-drawn vehicles and by moisture. When a break occurs in the surface, the surrounding pavement goes randily.

The third method of using oil is by a surface application on a concrete base. Our experience in Oakland is limited to one short street in the vicinity of the Livingston street wharf. Here we constructed a concrete base to which we applied oil and screenings in much the same manner as ordinary surface oiling. A few months after completion a change in conditions made this road the pathway for a motor truck, dragging a heavy lumber truck with iron tires. Within a few weeks the iron tires had crushed the screenings into a fine powder in long strips and loosened the bond of other parts of the surface so that patches could readily be stripped off with stick. The surface was repaired, and now, one year later, although the trafthe is insignificant, the surface is in bad condition.

It is hardly falt to condemn this type of pavement on this one fallure, one fallure, or reports from other places indicate that iron tire vehicles above and a concrete base below form a combination much like the proverbial milistones, and that the usefulness of this pavement is probably limited to streets that carry auto traffic and light pleasure vehicles exclusively.

The fourth way in which we use road oil in Oakland is a maintenance operation, being the repair of oiled streets of all kinds, and the patching of trenches opened therein. This speedily becomes important as soon as a town accumulates a few miles of streets.. There are all sorts o devices for doing this work. The type used should depend upon the amount of work expected. In 1911 we had placed in operation a patching machine that consists of a wagon truck on which is mounted an oil tank, a four-horse power boiler and a pump. The tank holds about 400 gallons and is fitted with a steam coil to keep the oil hot, To the pump is attached a flexible armored hose, fitted with spray nozzles. One man drives the pair of horses and another operates the machine. A steam roller accompanies the oiler, together with a sub-foreman, two carts and three laborers. Screenings are deposited along the street where needed and are distributed by eart.

Ordinary repairs, where the defects consist of spots from which the oil surface has been worked or stripped, are accomplished by sweeping away the dust, spraying lightly with oil, filling the hole with screenings and then rolling. Frequently the rolling is omitted, but that is unwise where there is much anto traffic. The greatest nicety of judgment is required in applying the right quantity of oil. Careless workmanship or poor judgment will soon repair an olded street into a wreck. Trench repairs or holes that extend below the sufface are treated differently. In this case rock,

1914

the coarser the better, is placed in the cavity, thoroughly rolled, offed, conered with screenings and rolled again. Here the secret of success is to have the rock well keyed into the surrounding pavement, and for trenches to have been properly backfilled.

So much for methods of using oil in Oakland The cost is best appreciated by comparison with plain macadam.

The cost of adding a surface of oil and screenings to our plain macadina has been about 7 cents per square yard, without including overhead expenses or cost of equipment. At present a contractor is doing some of our work at 10 cents per square yard, which price should possibly be reduced to enter the future, as the result of more experience and competition.

The cost of oil macadam, being paid by the abutting property owners, is best indicated by the contractor's bidding prices. The prices quoted are all hased on the ordinary public or private contract, where the contractor collects from the property owner. In former years we paid from 7 to 8 cents per square foot for plain macodam. Last year prices for single course oil macadam averaged about 9½ cents per square foot. This year prices for two course work averaged about 10.6 cents.

The foregoing indicate an advance of about 2 cents per square foot in the price of single course oil macadam over that of plain macadam But in this is probably included something to cover discount on the serial bonds that have been in use on this work in the last three years. These figures also indicate an advance of another cent, or slightly more, per square foot, due to laying the pavement in two courses. This is not all properly chargeable to olling, however for in most places aside from this part of Cilifornia, even plain macadam is laid in two courses.

We have reason to believe that certain tract owners, making terms of payment favorable to the contractor, have secured their work for 75 percent of these prices.

At this time it is impossible to give satisfactory figures on the cost of re-The mileage and area of our olled streets changes so rapidly, conditions are so varied on different streets. and our own repair work is so mixed with trench repairs for sewer contractors and public service corporations that definite figures are difficult to obtain. However, deducting charges hilled to public service corporations and others for whom we made repairs during the year 1913 our cost of oil patching was about \$7,000. With this amount we maintained about 784 miles of street. The following table is submitted as a comparison of the estimated cost of maintaining an average mile of oiled street and a plain macadam street under Oakland conditious

										Official	F 10	
Repairs .									. \$	\$9.00	\$212	.00
Cleaning										72,00	145	.00
Sprinkling				,							301	0.0
										317.00		

Total \$478.00 \$658.00 Oiled streets requiring about 73 per cent of the cost of plain macadam.

The above figures are submitted with some hesitancy, but with the helief that the ratio is approximately correct. Also with the helief that the ratio will remain somewhat the same for succeeding years, for while it is true that

our oiled streets are comparatively new, it is also true that improved methods of using oil and a further increase in the proportion of auto traffictend to make the future more favorable to oil.

In conclusion it may be said that asploitite oils have two while fields we usefulness (1) to protect and conserve existing plajan macadam streets against streets against changed traffic conditions brought to about by the automobile, and to reduce the mul and dust nuisance. (2) to help in no building a better macadam than the old type giving better service and having a wider usefulness. Incidents, incidents, sibly the much abused automobile with the possibly the much abused automobile with have assisted us-by force-to adopt a type of pavement that will reduce our maintenance bllis. That, of course, remains to be proved. The field of road oil is not to provide a substitute standard asphalt, brick or other high types of pavement, where the expense of these is justified by traffic conditions. Lastly, there is a wide variety of methods of successful use of oil. Good material, careful workmanship and expert supervision are necessary for all. The most important of these is experi supervision, for the way to success has been discovered only after many expensive failures, and the way to failure is just as open now to the inexperienced as it ever was.

NEW PACIFIC COAST HOME OF THE KAWNEER MFG, CO AT BERKELEY, CALIFORNIA.

One of the marvels of the age is the phenominal growth of the Kawneer Manufacturing Co., manufactures of metal store front construction.

Seven years ago "Kawneer Store Fronts" was first placed on the market. A small factory for its manufacture, was then located in Kansas City, Mo A year later the factory was moved to Niles, Miebigan, where it has steading grown until today, the parent Company there, is capitalized at \$1,300,000, in order to bandle the constantly, increasing output.

Branch offices are maintained in all the large cities throughout the United States and Canada and a branch factory is located in Toronto, Canada, which handles all of the British Empire Trade

Four years ago, the Company, in a modest way, opened an office in the Monadnock Building, San Francisco Two years later the business had grown sufficient to justify an assembling plant, which has been located since that time at Nos. 420-422 Tork Street. Every year the business has doubled the preceding year.

The directors of the parent company redizing the future prospects on the Pacific Coast, decided, some several months ago, to form n separate company out here and locate a manufacturing plant for the Pacific Coast and Oriental trade.

On June 8th, the Company moved into their new plant in Berkeley, which is a five hundred foot building of brick, concrete and steel and thoroughly five proof. Modern and up-to-date machinery for the manufacture of store front construction has been installed, the investment representing nearly \$200,000.

Branch sales offices are now located in Los Angeles, Portland, Seattle, and San Diego.

The personal of the new company is composed as follows: F. J. PLYM, (President of the parent

Company and original patentee of KAWNEER) President.

C. M. BOYNTON, Vice-President, W. P. FAIRBAIRN, Secretary,

The new building is a new departure in factory building construction, the roof being saw-tooth type, whereby, the maximum amount of light is secured,—thus making every part of the factory bright as day light.

The name "Kawneer" is now a household word throughout the English Speaking World. Firms destring news an special classes of buildings, such as Hanks, Churches, Schools, Ilutels, etc., will find such Items nil classified and grouped under pruper headings, commencing an this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house, 3 story and base, frame, \$12,500. Archi-Rousseau & Rousseau, Monadtects. nock Bldg., S. F. Owner, H. Peterson, Monadnock Bldg., S. F. The building will be erected on the east side of Franklin street south of Clay, covering an area of 25 by 74 feet. The building has been arranged to contain six suites of two and three rooms. Interiors will be finished in pine with some elm panels and hardwood floors. There will be wall beds and a hot water sys-Bath rooms will be finished in tile with composition floors. Exterior of the building will be covered with rustic and cement plaster on metal lath. Plans are complete and the work will be done by Day Labor.

SAN FRANCISCO-Apartment bouse. 3 story and base, frame, \$12,500. Architects, Rousseau & Rousseau, Monadnock Bldg., S. F. Owner, Theo, E. Bulfs. The building will be erected on property adjoining a similar building for Mr. Peterson, and will have a frontage of 25 feet and a depth of 74 feet. There will be a total of six three-room suites with baths. Interior will be finished in pine with elm panels and hardwood floors. Plans provide for private baths and wall beds. A not water supply will be installed. Bath rooms will have tile wainscot and composition floors. Exterior of the building will be covered with rustic and cement plaster on metal lath. Plans will be completed within a few days and segregated figures will then be calléd.

SAN FRANCISCO-Apartment house. 3 story and base, brick and steel, \$35,-000. Architects, O'Brien Bros., Clunie Bldg., S. F. Owner, Mrs. Bradbury. The building will be erected at the northwest corner of Polk and California streets, having a frontage on Polk street of 120 feet and on California of 54 feet. There will be seven stores on the first floor and a number of two and three room suites on the upper floors. Interior finish will be of pine throughout. Plans provide for steam heat, a hot water system and automatic eleva-All suites will have private bath rooms and wall heds. Bath rooms will be finished in tile with composition floors. Patent store fronts are specified. Exterior of the bullding will be faced with pressed brick Plans are now being prepared.

SAN FRANCISCO - Apartment houses, 2, 3 story and base, frame, \$12,-000 each. Architect, Charles J. Rousseau, 46 Kearny street, S. F. Owner, John Johanson. These two buildings will be erected on adjoining property on the east side of Franklin street between Clay and Washington. Each has been designed to contain six apartments of three and four rooms. Interiors will be finished in pine with elm panels and hardwood floors. There will be steam heat and a hot water system. Bath rooms will have tile wainscot and composition floors. Entrances will be finished in marble. Exterior of the buildings will be covered with rustic and cement plaster on metal lath.

Plans are nearly complete and work will shortly be started by Day Labor OAKLAND, CAL -Apartment bouse. 3 story and base, brick and frame, \$45,-600. Architect, Clay N. Burrell, Albany Bldg., Oakland Owner, C Laing. The building is now under construction at the corner of Grand avenue and Park View Terrace, and when complete will contain a number of two and three room suites. Interior finish will be of pine with some elm panels and oak floors. There will be steam heat and on oil burning plant. All suites will have wall beds and private bath rooms. The architect is now taking figures for the following work: Brick work, metal lath, elevators, hardwood finish and floors, canvas decks, tile and marble work, galvanized iron work and terra cotta tile.

OAKLAND, CAL.—Apartment house addition, 2 story and base, frame, Cost not stated. Archivet, William Wilde, Albany Bildg., Oakkind, Owner, B. Bercovich. The building located at the northwest corner of Isabel and San Pallo avenee, will undergo alterations and additions. Stores now occupying the first floor will be removed and a lobby and office for the apartments above will be installed. Upper floors will be remodeled and new plumbing, heating and electric work will be installed. Plans are complete and figures are now being taken.

SAN FRANCISCO-Apartment house, 3 story and base, reinforced concrete, \$20,000. Architect, O. R. Thayer, Merchants' National Bank Bldg, S. F. Owner's name withheld. The building will be erected on Polk street, and has been designed to contain a number of two and three room apartments. Interior will be finished in pine through-There will be steam heat and a out. hot water system Bath rooms will have tile wainscot and composition floors. Wall beds are specified. Exterior of the huilding will be faced with cement plaster. Plans are complete and figures are being taken.

BATH HOUSES.

SAN FRANCISCO-Bath house and swimming tank, concrete and brick. Cost not stated. Architect, Frederick D. Boese, 45 Kearny street, S. F. Owners, City and County of San Francisco. Plans have been completed for a bath house and swimming tank to be erected in the playgrounds at the corner of 19th and Angelica streets. A contract for the concrete work amounting to \$8,308 will be let at once. Bids for the balance of the work will be taken by the Playgrounds Commissioners short-Complete particulars can be secured from the Commissioners at their offices on the 6th floor of the Temporary City Hall.

SAN RAFAEL MARIN CO, CAL-Bath house equipment. Cost not started. Architect, Thomas O'Connor, San Rafael. Owners, City of San Rafael. Bids are now being called for on the mechanical equipment for the new public baths being erected in San Rafael. The work includes the fallowing: Steam heating, flush and salt water heating, swimming pool supply

and heating, steam generating and distributing engine, power transmission and bundry equipment. Blds will be opened on Jone 29th, Plans and specifications can be secured from the City Clerk

BANKS

STOCKTON. SAN JOAQUIN CO CAL-Bank and offices, 16 story and Class A construction. Cost not stated. Architect, L B, Dutton, Chronicle Bldg., S. Pearl Harbor Dock.

Complete reversal of the Navy Department's policy in the construction of the dry dock at Pearl Harbor, Hawaii, has been decided upon through the appointment of a special board of engi-neers to submit estimates for the completion of the work under the plans of Civil Engineer Alfred Noble of New From these estimates the de-York.

partment will decide whether to proceed with the work under contract or handle the dry dock construction itself

The members of the board are Civil Engineers L. M. Cox and F. R. Harris, U. S. Navy, the former stationed at the Norfolk navy yard and the other at the Now York yard. They have been instructed to take up the work at once and complete it with the atmost dispatch, in order that construction along the new lines may be begun at the earliest possible date.

Work on the Pearl Harbor dock had proceeded satisfactorily under the government's contract with the San Francisco Bridge Company until February 17, 1913, when the entire concrete floor of the structure was lifted by a tremendous subsurface pressure. At that time the contractors complained to the Navy Department that the plans of the dock were not suited to the conditions as they had developed. At their request an expert on the foundation conditions was sent to Hawall, Engineer Noble being selected. His report was to the effect that the plans should be changed to meet with conditions that had developed

Two weeks ago the contractors were ordered to proceed with the work on the first plans, but this order was revoked by the new decision. The total contract for the dock, which will be 1,000 feet long, involves approximately \$3,200,000, a large part of which had been expended when the floor became raised a year ago.

Phoenix Indian School, Industrial Buildlng.

The following bids were received by the Commissioner of Indian Affairs, Washington, D. C., for the construction of a brick industrial building at the Phoenix Indian School, Ariz.:

Joe Prasecki, San Francisco, Cal. \$17,461; if Keene cement is substituted for composition wainscoting, \$17,300; 180 days.

HARDWOOD FORESTS OF SOUTH AMERICA

[Consul Isaac A Manning, Barranquilla, Colombia.]

That there is much mahogany, Spanish cedar and lignum-vitte in the undeveloped forests of the Caribbean and Pacific coasts of Colombia seems well established, but from information previously had from people engaged in timber exploitation it appears that the stand will rarely exceed 15,000 feet to t'e acre and will not likely average alove 3,000 feet.

To secure these lands the better way by far is for the persons interested to come into the country and by the aid of local competent agents and guides, get in touch with owners, examine the properties and between them agree on natice. There is no fixed value, much depending on the necessities of the owner, location, and availability of the lands for agricultural and stock-ralsing purposes. It is safe to say, however, that prices of such lands, where titles are good and the lands not overrun by squatters, might be anywhere from \$1 to \$4 per hectare (2.47 acres). with owners usually asking, tentatively, the higher price, and probably willing to accept less than asked, in cash. Options are almost impossible to secure except for brief periods, sufficient to permit examination. To acquire a large area purchasers would probably lave to treat with various owners

Almost all the lands where such timher as suggested above is found would for colonization purposes, especially for cattle ranches and for sugar cane and other purely tropical products.

Reforestation-Government Land.

In this connection it might be mentioned that a firm which has been established in Colombia for a number of years owns about 15,000 acres on the Atrato River; 8 years ago it planted 30,000 Spanish cedar from the seed These trees will be on this tract. classed as merchantable timber in two years more. Last year one tree was cut for a special purpose from this planting, yielding a 30-foot log squaring 14 by 14 inches. This firm is planting 40,000 more trees this year and feels satisfied that this manner of reforestation can provide all future demends for this class of timber. These trees are planted 21 feet apart, and for the first three years the land between the trees is cropped with corn and plantains (bananas).

As to Government or waste land, it seems wise to this consulate that anyone desiring to obtain such go first to Bogota and confer with the Minister of Fomento (Exploitation).

Peru Imports Hardwoods Because of Luck of Railways. [Consul General Wm. H. Handley,

Callao, Peru.]

Although Peru is situated within a tropical latitude and the entire eastern slope enjoys a luxuriant vegetation with extensive primitive forests hard and valuable woods, the line along the entire western coast extending from the sea to the backbone of the Andes Mountains, a distance of 40 to 100 miles, or more, is practically void of all vegetation and appears as barren as a desert as far as the eye In a few instances along toe can see coast of Peru, where small rivers empty into the sea or where irrigation projects have been successful. some vegetable life is seen, in the form of bush growth, sugar cane, and cotton,

but never woodland or forests.

Most of the hardwood that is used in Peru to-day is imported from Nicaragua and California-cedar from the first-named and redwood rallway ties from the latter. On the eastern slope of the Andes Mountains and In the lower level in what is known as the Montana region, there are, as previously stated, vast tropical forests of hard, valuable woods; but inasmuch as there are no railroads connecting that region with the coast either west or east, Peru, for the present at least, should not be considered as a country offering good opportunities for the inof American capital in the vestment exploitation of hardwoods.

Econdorian Trees Useful for Lumber. (Consul General Frederick W. Goding. Guayaquil, Ecuador.1

LLOYD C. COMEGYS COMMERCIAL ATTORNEY

Weekly Talks on Efficiency and Advertising

by Lloyd C. Comegys

How Advertising Can Make Money For You.

In order to understand how advertising can make money for you it is necessary to understand what advertising is and what it can accomplish. Advertising in its broader sense, is:

First: PUBLICITY:

Which is that acquainting the public in a general way with the name of a firm or its offerings which does not have the appearance of direct advertising and is largely received by the public as news

Second: TRADE NAME ADVERTISING: Which appears to the public frankly as Advertising. It aims to make known the name of the firm and the goods it Trade name advertising does not count on direct results, relying upon sales being made by its own salesmen or by the other firms and salesmen who are acting or selling for

Third: DIRECT ADVERTISING:

Which is the selecting of definite parties or a definite locality to whom you desire to sell your offerings and getting your proposition, as directly as possible from you to them. In this you can figure the cost of doing so, the total amount realized on the volume of husiness obtained thereby and your profit on such business. You can submit a definite, concrete offer to them, and provide for a means of closing that offer and realizing your profit This allows you to pick out a large number of parties, submit your proposition to them and continue to follow up submitting it to them, until you have effected a sale or found that a sale cannot reasonably be made. other words, advertising and especially direct advertising is that scientific method or ald which can be used in disposing of whatever you have to offer, instead of relying entirely upon personal salesmanship as of old. Properly used advertising can make more money for you than possibly any other single business facility that there is,

If you can sell your offering to more than one party try at the same time to sell it to a thousand or more.

To hire salesmen would cost you much and it would be impossible for you to go to each of a thousand within any reasonable time. By advertising you can talk your proposition to the thousand in a single day. You can learn who is interested and who will not take your line

You climinate the time of personally seeing those who won't buy.

You eliminate the cost of personally seeing those who won't buy,

Your time is your capital and what is saved is added capital for additional Advertising enlarges your field of

action, enabling you to make more

Proper direct advertising also accomplishes trade-name advertising.

A trade journal or paper, whole the least sensational of all publications, it properly used, can be made to retorn very great results carefully and with the mind of the reader to the general trade subject If your ad has something live and interesting to say and it is said in an agreeable and clear manner, your little ad will drive home your proposition beore thousands at a less cost than a salesman could explain it to a few dozen persors

Just try making your advertisements live talking silesmen for you and not a mere jumple of words, and you will be surprised and greatly pleased at the increasel results.

LETTER HOXES TO ASSIST THE POST OFFICE DEPARTMENT.

The Postmaster of San Francisco has sent out an appeal for assistance in the matter of private mail receptacles, especially in references to flats and apartment buildings. Here is what he says.

> OFFICE OF POSTMASTER SAN ERANCISCO, CAL.

June 15, 1914. Daily Pacific Builder.

560 Mission Street San Francisco, Ca

Gentlemen:

I hope to secure your co-operation in 1 hope to secure your co-operation in 2 hope efforts to improve the local delivery ervice of this office. I am working to educe the stair climbing now being lone by letter carriers and to eliminate innecessary delays at doorways. The costal Laws and Regulations declare

Postal Laws and Regulations declare that private mail receptacles should be used to facilitate the delivery of mail. I wish to suggest that henceforth in planning or building houses for the residential section that you make arrangements for the installation of planning or unstall was a control of the residential section that you make arrangements for the installation of private letter hoxes near the bottom of good service should be larger than thouse now used in flats and apartment houses. It is not possible to insert a the present style of boxes. In a number of flats a push button at each box connects with the house bell and sermonest with the house bell and sermones with the house bell and sermone of the "keyless" type are now on the market. Simple combinations once them. One style is in the at this office is engaged in correspondence

ASPHALT FROM THE PHILIPPINES.

[Consul General Geo. E. Anderson. Hongkong, China.]

The discovery of a vein of asphalt of high quality and of large extent in the Philippine Islands is likely to have a marked influence upon the paving of cities in the Far East and upon other lines of building and contracting work The vein has been discovered by a Government forester who took an outcrop of the vein on a hillside for coal. The deposit lies in the Leyte Province. barrio of Campopoc, on the northwest peninsula of the Island about 18 miles from the ocean. The vein discovered runs about a yard and a half thick and can readily be traced about 160 1101 clong the of the life several tually in sight with indications to at e deposit is of more greater scope

To enalysis of the deposit made Durope shows that it is of a quality to oring the might stopeness. The discoverers of the vein are already using the material for rooting and similar Emanations of an only nature in the country near toe deposit

Prospective Benefits.

The successful application of this Philippine asphalt to paying and similar work will be of the highest importance, boto to the Philippines and to other portions of the East present aspiralt for paying roofing, and other purposes is imported from Europe and the United States at a high cost, the result being not only high priced pavements but a minimum of high grade material in construction of such pavements.

The Far East is just commencing to turn to modern pavements generally, and the use of asphalt heretofore has been quiet limited. In Hongkong where, by reason of its peculiar location and the nature of its topography, road building has received particularly areful attention and has been the subsect of considerable experimentation, little has been done in the use of aspiralt until comparatively recently and the change has been due to the increasing use of motor cars and heavy traffic vehicles instead of the chairs and jinrickshas, which heretofore have made the use of macadam and of concrete and cement practicable. On the less frequently used roads and on the higher levels a concrete mixture of broken stone, a peculiar sticky Chinese clay and lime has usually been employ-As a result of the heavier demand upon the roads of the lower levels by motor-car traffic the need of a heavier binder for the broken stone has been seen and most of the better class pavements now being laid are of broken stone laid in asphalt or in tar.

The supply of asphalt in the Far East at present is coming largely from the west coast of the United States and trade is increasing. Pavement grades of asphalt at present in Hongkong cost around \$35 gold per ton. other grades running as high as \$75 gold per ton, delivered in Hongkong in either case. In Hongkong little compressed asphalt has been used so far and that used has been imported through the Crown agents in London. Tar macadam is the chief payement employed at present, but government engineers report that they expect to employ more compressed asphalt in the

NEW METHOD OF STREET PAVING IN HAMBURG.

(Consul-General Henry H. Morgan. Hamburg, Germany

The so-called Kleinuthson, system for armoring roads has come into extensive use in Germany and other parts of Europe during the past few years. and experience has shown that roads laid with small granite blocks under this system have many advantages over highways armored with macadam or concrete. It is far cleaner than other armors, and roads laid therewith are pathenially free from dust and duriand during wet and damp weather the danger to horses from slipping is reduced to a minimum on account of the joints being so close together. The missical surface is smooth and well adapted for both light and heavy traffic. As a rule, the road once laid requires no maintenance.

The grante blocks used are cut by machines in the required shape and are covered by patents held by the Bornholm Granite Po. The cost of armoring roads with the Kleinpflaster system in Germany, including all necessary work, amounts to \$1.5x per square meter (1.196 square yards), and the life of the road is alrout 29 years where traffic is heavy and 30 years where traffic is heavy and 30 years where traffic is hight.

In a small pampilet wriften by Perdinand Weiller upon the Kleinpflaster system the following description of the method of laying the road

is given:

First, the old macadam is carefully ieveled and rolled. In the absence of an old macadam, one may lay a foundation of the second of

foundation to a depth of about one-half inch to bring up the shallow stones to the level of those of full depth. Only coarse-grained sand, without a 03 earthly substance, or fine gravel is but for this purpose The small stones should be of approximately cubical shape, not too wedge-shaped, 2% to 3 % inches or 3 to 4 inches in depth, the heads measuring 6 to 12 square inches The size of the cubes depends on toe hardness of the stone and on the amount of traffic. Numerous streets in Hamburg are armored with the so called Kleinpflaster, and photographs illustrating the same, together with a photograph showing the machine which spilts the stone into the required shape are forwarded fund will be loaned by the Bureau of Foreign and Domestic Commerce, Washington, D C.1

PRENDERGAST FOR JUSTICE OF THE PEACE,

Among the candidates for the office of Justice of the Peace to be voted for of the tener to be voted for in the coming primaries, we note one that should be kept in mind by all people interested in the building line because of his knowledge of conditions in real estate and building affairs in San Francisco. We refer to Mr. Thomas P. Prendergast, the well known attorney, who has for years been the authority for the Chronicle on these subjects, and who has written most exact and careful weekly articles on reality and building transactions.

His knowledge of the Inside history of matters of so much importance will be valuable to all the citizens if he should be chosen to the office he seeks. Our intimate acquaintance with Mr. Prendergast and our knowledge of his

a colue integrity, his conniness of independent and his keen sense of the true spirit as well as the letter of the law, warrant us in advissing all and right-middle and all the thinking and right-trial he is elected as one of the Justices of the Peace.

That he has been approved by the Bay Association of San Francisco in its found endorsement, and also by many of the influential cubis, improvement associations, etc. show how his candidate, is being received. We predict for Vr. Prendergast a sure victory at the public

PROCESS OF MAKING RAILS OF STEEL.

A. Russell Bond in the St. Nicholas Magazin: That tail mill was centainly a wonderful sight! The enormous glowing ingots were carried on a fransfer car (i.) soit of flough. The floor of the trough, or "table," as they call it, consisted of a series of rollers that were turning rapidly. Riding on them, the ldg claimsy ingot sailed along until it bumped against a pair of large steel rolls. Immediately the rolls seized it and hauled it through, like clothes through a clothes wringer. We could not see that it has been flattened down very much, but we noticed that deen corrugations had been cut into its upper surface. As it moved on, the rollers turned it over on its side before it was caught by the next pair or "stand" of roll. It went through four stands in succession, furning over between each stand, until it had made a complete turn. Then it came to what is called a "three-high" mill, which three rolls, one above the other. First the "bloom," as it is now called, went between the middle and bottom rolls, but no sooner had it emerged, than a was raised hodlly, the supporting roller 'tables" on both sides of the mill being raised up simultaneously. The rollers of the tables were then reversed, causing the bloom to start back between the middle and top rolls. The tables were now lowered, their rollers reversed, and the bloom sent through between the middle and bottom rolls as before; but this time it was switched to one side, where the rolls were a little larger in diameter, and it was a tighter squeeze getting through them And so the bloom went back and forth, being switched over to a tighter pass each time until it was squeezed down to about 5 inches square and over 40 feet long. Then it was cut in two, and each bloom went through another set of rolls that gradually worked it down to the size and shape of a rail. It was fascinating to watch that snakelike har over a hundred feet long, writhing as if alive. As it came back for its last sally through the rolls, a whistle was blown as a warning that the rolling was finished, and the rail was now on its way to the saws. There were five circular saws that dropped down upon the glowing metal, and, amid a shower of sparks, sawed it into four ten-yard ralls. After that, the rails were carried off on "run-out tables" to the "hotheds" to cool.

"GRINGO:" HOW THE NAME WAS APPLIED BY THE MENICANS.

Perhaps only one person in a hundred knows how the word "Gringo" one to be applied to Americans by the Mexicins. What does it mean? And why did the Mexicans apply it to us? The derivation and origination of words has filled several volumes—but only a few of them are shown to have spring into life in such a unique and interesting way as "Gringo." And this is how it happened.

When the soldiers were marching through Mexico in our war with that Country. They fell to singing "Green Grow the Rashes, O". Wherever they went, this sing heralded their coming. The Mexicans, listening, did not quite gates the meaning. "Green Grow," etc., the soldiers sang to the top of their hings. The two words—green grow—stock in the Mexicans' minds. And so in a short time the soldiers and all Americans along with them, were given but a many controlled them.

FLOOD CONTROL IN CHINA BIG ENGINEERING FEAT,

To reclaim more than 17,000 square mules of fertile land which has been annually desistated by the overflowing of the Huat River, the Chinese governmert has authorized a bond issue of \$20,000,000, and designated a New York engineering firm to undertake the construction of dams and reservoirs. The project is one of the greatest of engineering enterprises, even in this day of big things. An interesting feature of the matter is the fact that the general supervision of the work has been intrusted by the Chines government to the Red Cross Society. The territory served by this project is larger than the combined arease of New Jersey, belaware, Connesticut, and Island, with Long Rhode thrown in The river Huai, also known as the Huai-Ho, 800 miles long, has been subject to violent floods for 2,500 years, and as in many places, even at low stage it is kept within its course only by dikes of earth, its ravages during the spring floods are the source of tremendous losses. The plan is to dredge the channel of the river and of the Grand Canal, which It feeds; to construct dams and reservoirs, and to store the surplus water against the time of drouth. Many tributary streams are to be diverted, and the entire project cannot be completed for many years -Popular Mechanics, -

THE NEW BOOK OF EVIDENCE.

The Ceresit Waterproofing Co. of Cheago, have published a very interesting book on waterproofing, that should be in the hands of every architect and contractor. They are free for the asking. Drop a postal to the Ceresit Waterproofing Co. Chicago, or it Parrott & Co., 220 California St. S. Ft., who are the Pacific Coast Representatives. Just say "Send me the New Book of Evidence"
